

Stacy Boone

This permit tracker would be more helpful for me if there was the ability to search by location. I do not always know the project name or permittee name, so being able to search geographically would be the most useful addition to the tracker system. This could be done via search by county or zip code, or by a mapping feature. The mapping feature could be a stand alone item or it could be a "permits in progress" layer on MPCA's existing "What's in my Neighborhood" map.
