

## Laura Richert

Our house is on the same water system as the lake near Liberty. For years we have had issues with low water levels after White Bear Lake drained the area around us. We do not feel comfortable being on the same water system that will be putting out there amount of wastewater each day that this school will. Who is going to clean our lakes and our drinking water if the school contaminates the area. There is a reason we are not hooked up to city waters or wells. It's irresponsible to think that a waste water treatment area this big can be sustained in a rural area. It's going to affect homes, health and wildlife. The fact that they also went around the well size of 10,000 gallons per day and made several that are going to be pulling from the same area is dishonest. This needs to be reviewed because if you allow Liberty to do this then it doesn't stop anyone from doing it. What if 10 other entities that size went up between Liberty and White Bear Lake? You are affecting property values so that one school can have their way. They have taken zero input from the community that actually lives around the school as most of these families live no where close to it so their property values, health, water quality, and lake homes will not be affected! This is a disgrace if it goes through!
