

Sheila Hause

Thank you for the opportunity for being part of this informational meeting. I was disappointed by the MPCA's inability to answer a number of questions from the community, including the lack of awareness on the part of the MPCA, in regards to the Brown's Creek Watershed project connected to Goggins Lake. At one point the comment was made by MPCA that we "should be fine". With all of the recent PFAs issues that are present in groundwater, lakes and streams around the state, I have great concern with "should be fine". Due to this lack of awareness and knowledge, it would be in the public's best interest for the MPCA to conduct an Environmental Impact Study for this wastewater treatment facility that LCA is wanting to build.
