

Kelly Williams

I appreciate MPCA taking the time to meet with the public and hear our concerns on 5/13/2025. At a May Town Hall meeting last year one of my neighbors brought up the point that all surface run off from this site is going to wind up in the retention pond that is being planned. One of the LCA engineers agreed that that was the case and stated that the retention pond would need to be dredged to stop contaminants from entering the aquifer. How often will that need to happen? Will MPCA be monitoring the amount of contaminants in the retention pond and whether or not it is being cleaned?
