

## Chris Hause

During the Public Informational meeting on 5/13, it became apparent that the MPCA was totally unaware of the infrastructure that the Browns Creek Watershed District installed to lower the lake level of Goggins and connected lakes. This infrastructure is roughly 650ft from the SE corner of the schools property and feeds directly into Browns Creek.

It lies to the South SouthEast of the WWTF. Exactly the direction the MPCA stated for the WWTF infiltration flow.

It would seem that the MPCA did not research the potential of infiltration into Browns Creek.

I question what type of Environmental Review was completed for this project if infrastructure like this was not known to the MPCA.

Please do the proper research and dig into how this might impact contaminates flow into Browns Creek.
