

Jim Kloek

Having this large school in an area without proper utilities makes no sense. To the point that the academy has to drill several wells to circumvent legal issues on drilling only one. The demand on the water table could cause problems with wells in the area, and put all area homeowners in jeopardy of having well issues. This academy should be built at a place that offers city sewer and water. There are alternatives in Hugo and Forest Lake that could accommodate the academy. Building a large industrial project, in a rural setting, with no proper utilities makes no sense. I urge the MN PCA to refuse this permit.
