

Ashley Hay

Hello,

I am a local resident of the May Township area and have been following LCA's attempts to expand since the beginning. Their plans to drill multiple wells drawing more than 10,000 gallons per day could affect area aquifers as well as lake levels as far reaching as White Bear Lake; the wastewater treatment facility at 25,625 gallons per day has the potential to allow contaminants into area groundwater, Goggins Lake, and Browns Creek. It could also deplete public and private wells.

Please help keep our area rural and reject their permits. They have been bullying our small town to get what they want regardless of the effects on the local community and environment. You're our only hope.

Thank you,
Ashley
