

Travis Ross Travis Ross

As a individual working in mining and wastewater treatment industries I completely disagree with the 10 mg/L sulfate standard for Keetac and MN as a whole. Sulfate is a naturally occurring part of all the rock in the range. I am completely for protecting the environment as my friends and family all enjoy the outdoors and protecting that for generations to come. As a licensed MN class B wastewater operator this standard will bankrupt any small town trying to get to this 10mg/l standard. Please reconsider this standard and be realistic to provide a solution to protect not only the jobs this mine provides and the communities that will never be able to afford to treat to this standard in municipal discharges.

Thank you,
Travis Ross
