

Julia Rice

Please commit to fully cleaning up Area C. Ford should never have been allowed to dump toxic materials into the Mississippi River floodplain and USACE and the City of St. Paul only compounded the disruption of the floodplain by dumping construction rubble on top of Ford's waste. I'm urging the MPCA to commit to Alternative 6: Removal of all Wastes and Site Restoration so that Ford finally cleans up one of the many messes it has made in this area of the river and helps establish a healthy floodplain ecology for future generations.

Thank you.
