

Matt Nienstedt

I am writing to strongly urge the MPCA to reject the proposed partial cleanup options and adopt Alternative 6.

Leaving hazardous industrial waste on the banks of the Mississippi River, as in other alternatives, is not a sustainable or just solution for our community. Alternative 6 is the only option that offers a permanent, responsible, and safe future for this sensitive site. Partial, cheaper, or temporary solutions are not acceptable when the health of the Mississippi River and our community is at stake. Alternative 6 provides the greatest protection to human health and the environment by removing all waste material from the Site.
