

Ian Young

I live near the river and the Ford dump site. This stretch of the river is totally unique and a state treasure that belongs to all Minnesotans. It is improper to leave the hazardous waste on this site to continue threatening the health of the river and burdening future generations with its cleanup.

Please select Alternative 6 to fully remove the toxic waste. Ford Company may not like the price tag on that alternative, but they were the ones who created this mess in the first place. It should be their responsibility to fully undo the harm they have caused, and it should be MPCA's responsibility to hold them accountable and not leave taxpayers holding the bag.
