

Rick Palm

Thank you for your request for input.

I live downstream from Ford's historic hazardous dump grounds and feel strongly that every step needs to be taken to hold them accountable for this. By dumping on the river they reduced expenses and increased profits during that period of use. Those profits that they invested in Ford should now be accessed to pay for 100% of a complete and thorough remediation. This will allow full restoration of the site for reestablishment of nature river habitat. The public should not pay for their profiteering but demand accountability.

Thank you,

Rick
