

Elyse Collyer

Neither of Alternative 3 or 4 would require Ford to fully remove the toxic waste at the core of the pile left by Ford Motor Company, nor would they require the removal of all the construction debris.

We cannot leave this waste for future generations to clean up.

I believe that "Alternative 6: Removal of all Wastes and Site Restoration" is the only just and viable alternative to maximize environmental and human health at the site and protect future generations from the consequences of this contamination.
