

Laurie MacLeod

The Mississippi River and its health are crucial to this state, and should never have been used as a convenient dumping site by the Ford Motor Company. They must be held responsible for leaving a hazardous waste pile on the banks of the Mississippi. I believe that Alternative 6: Removal of all Wastes and Site Restoration" is the only just and viable alternative to maximize environmental and human health at the site and protect future generations from the consequences of this contamination. This is the most expensive cleanup option, however I believe that this option will protect taxpayers from having to pay for this mess in the future.
