

## Jodi DeCamp

- 1) Any project of this size should demand that an EIS be done.
- 2) An EIS was required for a smaller project in Baker Township in Stevens Co. & the Fehr's dropped the project. If these projects are environmentally safe, why would there be opposition to doing the EIS.
- 3) Have you considered the adverse impacts caused by other dairies owned by the Fehr's in both MN and other states? i.e. drinking water, our spreading of manure, etc.
- 4) Cropland for upcoming young farmers is unavailable due to the Fehr's outbidding anyone.
- 5) An EIS would address socio-economic and community concerns.
