

## Steven Landwehr

The Environmental Assessment Worksheet for this project looks very thorough and complete. Riverview has been a great role model in the industry at both designing and operating facilities that meet the strict guidelines that MPCA has laid out, the documents provided in the EAW supports that evidence. Their continued investment in rural Minnesota has helped many communities and farmers remain financial viable for the foreseeable future. These projects bring a valuable nutrient resource to local crop farmers instead of relying solely on commercial fertilizer imported from all over the world. In return these farmers are able to sell their crops locally, this process really reduces the environmental impact related to harvesting crops and getting them to a usable local source. The milk from the project ensures we have high quality food produced and processed locally for all to consume. I am in support of this as this is another project for rural Minnesota that provides new jobs, local economic growth, and an investment that will be there for generations to come that supports many other local residents and industries.
