

Robert Christie

A proposal requesting removal of 300 million gallons of water from any aquifer that is already a water source for many families should voluntarily agree to do an EIS. AS alarming as water use is, even worse is a request to apply over 200 million gallons of manure on coarse textured ground. Here in SE MN. an area of high livestock numbers we have an alarming number of wells that have developed high nitrate levels. Now is the time to get it right and ask the right questions. Please make every effort to protect our greatest resource WATER. Require an EIS!
