

Linda Herron

With such a large cow population (11,000), the need for a complete Environmental Impact Statement(EIS) is obvious. Such an immense feedlot has a strong potential for water pollution(including groundwater) as well as land (where manure wastes are stored) and air pollution (methane gas).

Considering past applications of the environmental laws in Minnesota, enforcement of existing laws has been spotty. As a Minnesota resident and taxpayer, I urge the MPCA to follow best practices and require an EIS before any enlargement of the facility is approved.
Thank you for the opportunity to comment.
