

William Henke

Hello and thank you for allowing the public to comment on this project. In my opinion this project should not be allowed to proceed. I believe that this project is environmentally dangerous in terms of the mammoth amount of manure that it will distribute and the quantity of water needed to support it. An EIS should absolutely be required before any further steps are taken. In addition, I believe that CAFO's are inhumane, a severe risk for zoonotic infections and a public health risk in terms of increasing antibiotic resistance. Lastly, these huge confinement operations have been the death knell to the small dairyman (woman) and the small rural communities that support them. We can do so much better! William Henke
