

## Amanda Mayer

I'm a concerned citizen of Minnesota that recently learned about the proposed expansion of the dairy farm. I feel the potential impact on our MN natural resources by this private company's expansion of operations is potentially enormous. To me, this very much warrants further exploration and closer examination of the details of this situation. I think a comprehensive environmental review of West River's plans would be extremely appropriate given the magnitude of impact this could have. The scope of this dairy farm expansion is unique. I support getting an Environmental Impact Statement before any permit approval and I hope you do too. Thank you for considering public commentary. We all share this beautiful state together.
