

Adam Koehl

I am a farmer that lives in close proximity to Riverview Dairy sites. They have been excellent stewards of the environment and take the utmost care to ensure that this continues. Manure is injected directly into the ground so that crops can quickly utilize the nutrients and no manure runs off. The manure replaces the need for commercial synthetic fertilizers. An expansion would mean more alfalfa is grown in the area which is an excellent rotational crop that improves soil health and surface water quality. This expansion is 3 miles from where I live and I am writing in strong support of this project. It will improve our environment and our community.

Thank you,
Adam Koehl
