

## Nicola Philpott

The Riverview Dairy project must be required to get an Environmental Impact Statement. Its environmental harm would be enormous.

Huge waste output: The facility would generate about 202.7 million gallons of liquid manure and wastewater annually, plus 26,400 tons of solid manure.

Massive water use: Riverview would pump up to 226 million gallons/year from an off-site well—nearly as much as the entire City of Morris (permitted for 300 million gallons/year for 5,000+ residents).

Unknown groundwater impacts: The DNR hasn't begun the hydrologic survey or completed the County Geologic Atlas for Stevens County, so aquifers and groundwater resources aren't mapped—making it risky to permit large withdrawals now.

Sensitive, already-impaired waters: The expansion sits in the Pomme de Terre watershed, designated sensitive; the nearest waters—the Pomme de Terre River and a nearby unnamed creek—are already listed as impaired. The project would likely worsen these impairments.

Advancing permits without a full understanding of groundwater and water-quality risks is irresponsible. It is critical that the MPCA require a full Environmental Impact Statement.
