

## Emily Ann Raeker

Please do an EIS before hand. There is a lot at stake here.

Im not as elegantly voiced as some individuals but please hear my voice as well.

We live nearby and are concerned about many things involved woth this project.

The amount of water they want to take is almost as much as the city of Morris! That's frightening, especially for people that live off wells around this area. Not to mention the wildlife in the area..

There is also too much land they want to destroy that is a habitat for many water fowl in the area. That would be devastating.

The smell would also be terrible.

I dont trust that they would abide by everything they are saying they would.. in other locations of theirs they have already over pumped and polluted the land.

It also won't supply that many more jobs at all.

My main concern is the aquafir, the pollution and the loss of habitat.

Please enforce a thorough investigation. I know this won't stop it yet but we need to start somewhere.

Thank you
