

Kristen Ringham

I vehemently oppose this project!! Huge feedlots are terrible not only for the land, but for our family farms as well. Furthermore, a quick look at their other feedlots shows they have been liable for over-pumping ground water, manure lagoon failures and various other infractions. Our clean water in Minnesota is one of our greatest resources and treasures. Are we going to squander it on a huge operation that gives little, if anything, back to our local economy and that pollute and degrades all the things we as Minnesotans hold most dear? One would hope not!! Give a resounding NO!! to this permit and project.
