

Sue Bruer

I am very concerned about the impact of this facility for several reasons: 1) ground water supply, 2) pollution of water shed, pollution of soil and biodiversity, and 3) impact on small family farms in the area. A full EIS needs to be done to understand the impact of this project. Also, past history with previous Riverview projects need to be taken into account. An undertaking this large is sure to create unseen problems. Please be diligent in all aspects of researching this project.

Thank you
