

Margie Diggins

I'm against forcing animals into these crowded, non pastured, conditions for the sake of more efficient milk production. Cows should be out in green pastures under sunshine & called in twice a day to be milked, like I was raised on our small hobby farm. I no longer support dairy from these big industrialized facilities. Grass fed naturally is where food production is going...catch a clue... It's much healthier for us & our children & the animals. Thank you for listening.
