

## Sylke Boyd

I am concerned about the impact of this facility on several factors: (1) the ground water supply, (2) pollution of the surface water shed, (3) increased traffic, (4) the welfare of the animals involved, (5) further degradation of the soil, biodiversity, landscape of the county. This project should undergo much scrutiny in terms of the true necessity to further degrade our natural resources. I am opposed to sacrifice them for the increase in wealth and influence of a corporation that has previously shown to act irresponsibly with public goods.
