

## Uli Koester

I am deeply concerned about Riverview LLP's plans to build a large new dairy operation in western Minnesota. This operation could hold up to 20,000 animal units. A dairy this size demands a full EIS by your agency. Please consider the pollution concerns of such a large operation, and how they will effect Minnesotans. Of special concern are the use of ground water, poor air quality stemming from the manure lagoons, and the dangers of these lagoons in a watershed of the Minnesota River.
