

Angela Lofquist

An operation like this must require care of our environment and the impacts it will have on it. I am voting for requiring an environmental impact statement from this company sharing how they intend to clean and return water to the aquifers they're pulling out of. How is waste being managed properly? And any other environmental issues that come along with such a large operation without natural buffers. I do not support large corporations taking away jobs and land from small farmers and local communities.
