

THOMAS KALAHAR

This is insane. As a former feedlot inspector for Renville Co. I find this a major threat to our water supply both surface and groundwater. Our surface and groundwater in the agricultural regions of the state are already badly degraded by the Ag industry. To add yet another threat is MPCA not doing their job to protect the citizens. All the water in this region is already degraded/impaired due to lack of regulation and influence by big Ag. For once do your job and defend the citizens and not corporate agricultural.
