

Mitchell DeBuhr

Living close to the dairy, I am concerned about the water input this dairy will require. I am also concerned with water quality. I have a family and livestock living off well water. Loosing that resource would be catastrophic. I have concern regarding local traffic and wildlife impact. Many times trucks running to the dairy disregard traffic laws and don't share road space safely when we are working in ditches. Lastly with the need for land and the ability for them to pay large prices, it affects local families being able to afford land as prices are driven up.
