

Erica Kettner

I am very worried about our water supply. We have well on our century farm. I worry about my health and the animals wild and domestic. We have endangered salamanders in our stream. What will happen to them if their habitat dries up. We have eagles,owls,and Hawks. They all could be greatly impacted. They may not be able to raise their young if the data center effects our current habitat. We don't need nor want any change to our environment. No data center, no sewer, no proper lines! Minnesota should protect this beautiful land. Once it is destroyed you can't get it back!
