

Scott County (Jody Brennan (Commissioner))

I watched the presentation on you tube.

A question was asked about the Waste Water Treatment Facilities and if that process is considered in recycling numbers.

The answer was no.

The majority of people that I know send their food waste into the disposal and that food waste ends up at the Waste Water Treatment Facility. At the Blue Lake treatment Facility, solids are dried and turned into pellets. Those pellets are used as fertilizer.

My opinion is that it should be included in food recycling numbers.
