

**Draft
Air Individual Permit
Part 70 Reissuance
13700005-101**

Permittee: US Steel Corp - MinnTac
Facility name: US Steel Corp - MinnTac
8771 Park Ridge Dr
Mountain Iron, MN 55768-2075
St. Louis County

Expiration date: [Five years from issuance date]

* All Title I Conditions do not expire

Part 70 Reissuance: TBD

Permit characteristics: Federal; Part 70/ Major for NSR; Limits to Avoid NSR

The emission units, control equipment and emission stacks at the stationary source authorized in this permit reissuance are as described in the submittals listed in the Permit Applications Table.

This permit reissuance supersedes Air Emission Permit No. 13700005- 006 and authorizes the Permittee to operate and modify the stationary source at the address listed above unless otherwise noted in the permit. The Permittee must comply with all the conditions of the permit. Any changes or modifications to the stationary source must be performed in compliance with Minn. R. 7007.1150 to 7007.1500. Terms used in the permit are as defined in the state air pollution control rules unless the term is explicitly defined in the permit.

Unless otherwise indicated, all the Minnesota rules cited as the origin of the permit terms are incorporated into the SIP under 40 CFR § 52.1220 and as such are enforceable by U.S. Environmental Protection Agency (EPA) Administrator or citizens under the Clean Air Act.

2. Where to send submittals

Send submittals that are required to be submitted to the EPA regional office to:

Chief Air Enforcement
Air and Radiation Branch
EPA Region V
77 West Jackson Boulevard
Chicago, Illinois 60604

Each submittal must be postmarked or received by the date specified in the applicable Table. Those submittals required by Minn. R. 7007.0100 to 7007.1850 must be certified by a responsible official, defined in Minn. R. 7007.0100, subp. 21. Other submittals shall be certified as appropriate if certification is required by an applicable rule or permit condition.

Send submittals that are required by the Acid Rain Program to:

U.S. Environmental Protection Agency
Clean Air Markets Division
1200 Pennsylvania Avenue NW (6204M)
Washington, D.C. 20460

Send any application for a permit or permit amendment to:

Fiscal Services – 6th Floor
Minnesota Pollution Control Agency
520 Lafayette Road North
St. Paul, Minnesota 55155-4194

Also, where required by an applicable rule or permit condition, send to the Permit Document Coordinator notices of:

- a. Accumulated insignificant activities
- b. Installation of control equipment
- c. Replacement of an emissions unit, and
- d. Changes that contravene a permit term

Unless another person is identified in the applicable Table, send all other submittals to:

AQ Compliance Tracking Coordinator
Industrial Division
Minnesota Pollution Control Agency
520 Lafayette Road North
St. Paul, Minnesota 55155-4194

Or

Email a signed and scanned PDF copy to:
submitstacktest.pca@state.mn.us
(for submittals related to stack testing)
AQRoutineReport.PCA@state.mn.us
(for other compliance submittals)
(See complete email instructions in “Routine Air Report Instructions Letter” at
<https://www.pca.state.mn.us/sites/default/files/aq-f6-15.pdf>)

3. Facility description

The U.S. Steel Corp - MinnTac (Facility) is located at 8771 Park Ridge Dr, Mountain Iron, St. Louis County, Minnesota.

U.S. Steel owns and operates a taconite mine and pellet production plant, known as MinnTac, in Mountain Iron, Minnesota.

The pellet plant converts crude ore into taconite pellets to be used at iron and steel mills. The activities at the pellet production plant include primary, secondary and tertiary crushing of crude ore, ore handling, material receiving and handling, pelletizing, and pellet storage and loadout.

The pellet plant consists of two crushing lines that feed into five pelletizing lines, each with a rotary kiln. The pelletizing lines were constructed in three steps. Step I was constructed in 1967 and contains one pelletizing line, Line 3. Step II was constructed in 1972 and contains two lines, Line 4 and Line 5. Step III was constructed in 1978 and contains two lines, Line 6 and Line 7. There is one primary crushing line providing ore to the Step I and Step II pelletizing lines, and one primary crushing line providing ore to Step III pelletizing lines.

The primary pollutants from the pellet production plant include products of combustion from the kilns firing the pellets including nitrogen oxides (NO_x), sulfur dioxide (SO₂), carbon monoxide (CO), volatile organic compounds (VOCs), particulate matter (PM), particulate matter less than 10 micron in diameter (PM₁₀), particulate matter less than 2.5 micron in diameter (PM_{2.5}), and various hazardous air pollutants (HAPs). There are also PM, PM₁₀, and PM_{2.5} emissions from material handling operations at the plant. Mercury and other metallic HAPs are also emitted from the ore when pellets are fired in the rotary kilns.

U.S. Steel operates controls such as wet scrubbers and cartridge filters (fabric filters) to control emissions from point sources at the pellet plant.

The mine portion of the facility is an open pit mine that produces crude ore to feed the pellet plant. Ore is freed from the earth using explosives, loaded into trucks and driven to the two crushing lines. Activities at the mine include blasting, loading, and hauling of crude ore. The primary pollutants from the mine portion of the facility include PM, PM₁₀, and PM_{2.5}.

Non-ferrous leftover material from the ore fed to the pellet plant, known as tailings, are sent to a tailings basin. Wind erosion of the exposed tailings beach, along with construction of dikes and vehicle traffic are sources of PM, PM₁₀, and PM_{2.5} emissions.

U.S. Steel implements dust control measures at the mine, pellet plant, and tailings basin to reduce fugitive dust emissions. These measures include application of water and dust suppressant when weather permits. At the tailings basin, U.S. Steel applies cover material as weather permits.

This permit action is Part 70 Reissuance incorporating 4 major amendments, 11 minor amendments, 7 administrative amendments, 4 MPCA-initiated reopenings, 3 notifications of replacement of controls, and 2 notifications of replacement of unit. This permit authorizes the replacement of existing wet controls in the pellet plant with cartridge filters as applied for in the 2013 major amendment application. The Permittee has already completed all other construction associated with minor amendments and notifications. The applications incorporated are as follows:

Two 2006 minor amendments to establish parametric monitoring operating limits for control equipment subject to 40 CFR pt. 63, subp. RRRRR

A 2008 administrative amendment, under 7007.1400, subp. 1(C) to incorporate NSPS requirements for a fire pump engine.

A 2008 major amendment and two 2008 minor amendments to establish parametric operating limits for controls subject to 40 CFR pt. 63, subp. RRRRR based on initial performance tests.

A 2008 MPCA-initiated reopening under Minn. R. 7007.1600 to establish throughput limits on EQUI 350, the Line 3 cooler vent stack. The MPCA will not carry forward this limit in the reissued permit.

A 2010 administrative amendment, under Minn. R. 7007.1400, subp. 1(G), requested clarification that the NO_x limit for the five pelletizing lines would take effect after February 1, 2010.

A 2010 administrative amendment, under Minn. R. 7007.1400, subp. 1(G), requested clarification in the permit of biomass materials allowed in Lines 3-7 kilns.

A MPCA-initiated 2010 reopening, under Minn. R. 7007.1600 to establish water flow and pressure drop operating limits for controls CE009, CE016, CE071, TREA 48, TREA 65, TREA 69, and TREA 156 pursuant to 40 CFR 63.9590. U.S. Steel has been operating according to the limits set in the notice of compliance. CE009, CE016, and CE071 have since been replaced with dry controls.

A 2010 notification of replacement of controls, under Minn. R. 7011.1150 (C)(3), for the replacement of CE011 with cartridge filter TREA 210.

A MPCA-initiated 2011 reopening under Minn. R. 7007.1600 to establish water flow and pressure drop operating limits for TREA 126 pursuant to 40 CFR 63.9590

Two 2011 notifications of replacement of controls, under Minn. R. 7011.1150 (C)(3), for the replacement of baghouse CE095 with baghouse TREA 211.

A 2012 administrative amendment for a test extension.

A 2012 minor amendment to replace a tertiary crusher EU138, with a new tertiary crusher EQUI 673.

A 2013 major amendment for the replacement of wet scrubbers with dry cartridge filters. U.S. Steel has carried out numerous replacements requested in this application under a schedule of compliance agreement with the MPCA.

A 2014 administrative amendment, under Minn. R. 7011.1400, subp. 1(C), to incorporate a more frequent testing schedule for CO, VOC and fluorides at the five kiln waste gas stacks.

A 2016 minor amendment to replace two tertiary crushers, EU 136, and EU 137 with one new weir crusher. U.S. Steel has completed construction of the new weir crusher.

A 2016 minor amendment to replace a 500-kW emergency generator, EU215, with a new 500-kW emergency generator, EQUI 671. U.S. Steel has completed construction of the new generator.

A 2018 minor amendment to replace a rod mill with a higher capacity grinder and to add five conveyor drop points to the permit as emission units.

A 2020 major amendment to replace wet scrubber CE082 with a cartridge filter TREA 216. U.S. Steel has completed the replacement as authorized by a schedule of compliance agreement with the MPCA.

A 2021 minor amendment to install a new diesel emergency generator, EQUI 672. U.S. Steel has completed construction of the new generator. Two 2022 notification of replacement of unit notifications to replace damaged pellet conveyors with temporary conveyors and subsequently permanent replacement conveyors.

A 2023 minor amendment to install a new diesel emergency generator, EQUI 673. U.S. Steel has completed construction of the new generator.

A 2023 minor amendment to install venturi scrubbers above a pellet conveyor transfers EQUI 119 and EQUI 120 and route emissions to a new stack, STRU 271.

A 2024 MPCA-initiated reopening, under Minn. R. 7007.1600, to revise operating parameter limits for scrubbers TREA 37 and TREA 38, which control Lines 4 and 5.

A 2024 minor amendment to replace an emergency generator, EQUI 274, with a new emergency generator, EQUI 706. U.S. Steel has completed construction of the new generator.

5. Limits and other requirements

Requirement number	Requirement and citation
TFAC 2	US Steel Corp - MinnTac
5.1.1	Permit Appendices: This permit contains appendices as listed in the permit Table of Contents. The Permittee shall comply with all requirements contained in Appendices. Appendix A. Insignificant Activities List Appendix B. Fugitive Dust Control Plan Appendix C. 40 CFR Part 60, Subpart A - General Provisions Appendix D. (removed prior to permit issuance) Appendix E. 40 CFR Part 60, Subpart LL - Standards of Performance for Metallic Mineral Processing Plants Appendix F. 40 CFR Part 60, subp. OOO Appendix G. 40 CFR Part 60, Subpart IIII - Standards of Performance for Stationary Compression Ignition Internal Combustion Engines Appendix H. 40 CFR Part 63, Subpart A - General Provisions Appendix I. 40 CFR Part 63, Subpart ZZZZ - National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines Appendix J. 40 CFR Part 63, Subpart RRRRR - National Emission Standards for Hazardous Air Pollutants: Taconite Iron Ore Processing Appendix K. 40 CFR Part 63, Subpart DDDDD - National Emission Standards for Hazardous Air Pollutants: Industrial, Commercial, and Institutional Boilers and Process Heaters Appendix L. Fabric Filters Authorized for Construction Appendix M. Fugitive Source List Appendix N. Authorized Biomass in Rotary Kilns Appendix O. Presidential Proclamation on Regulatory Relief for Certain Station Sources To Promote American Iron Ore Processing Security Appendix P. Modeling Parameters for the Indurating Process Modification (Permit 13700005-004). [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.1.2	The Permittee must comply with Minn. Stat. 116.385. The Permittee may not use trichloroethylene at its permitted facility including in any manufacturing, processing, or cleaning processes, except as described in Minn. Stat. 116.385, subd. 2(b) and 4. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0100, subp. 7(X), Minn. Stat. 116.385]
5.1.3	PERMIT SHIELD: Subject to the limitations in Minn. R. 7007.1800, compliance with the conditions of this permit shall be deemed compliance with the specific provision of the applicable requirement identified in the permit as the basis of each condition. Subject to the limitations of Minn. R. 7007.1800 and 7017.0100, subp. 2, notwithstanding the conditions of this permit specifying compliance practices for applicable requirements, any person (including the Permittee) may also use other credible evidence to establish compliance or noncompliance with applicable requirements. This permit shall not alter or affect the liability of the Permittee for any violation of applicable requirements prior to or at the time of permit issuance. [Minn. R. 7007.1800(A)(2)]
5.1.4	Comply with Fugitive Emission Control Plan: The Permittee shall follow the actions and recordkeeping specified in the fugitive dust control plan in Appendix B of this permit. If the Commissioner determines the Permittee is out of compliance with Minn. R. 7011.0150 or the fugitive control plan, then the Permittee may be required to amend the control plan and/or to install and operate particulate matter ambient monitors as requested by the Commissioner. [Minn. R. 7007.0800, subp. 2(A), Minn. R. 7009.0020, Minn. R. 7011.0150, Minn. Stat. 116.07, subd. 4a(a)]

Requirement number	Requirement and citation
5.1.5	The Permittee shall comply with National Primary and Secondary Ambient Air Quality Standards, 40 CFR pt. 50, and the Minnesota Ambient Air Quality Standards, Minn. R. 7009.0010 to 7009.0090. Compliance shall be demonstrated upon written request by the MPCA. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.6	Circumvention: Do not install or use a device or means that conceals or dilutes emissions, which would otherwise violate a federal or state air pollution control rule, without reducing the total amount of pollutant emitted. [Minn. R. 7011.0020]
5.1.7	The Permittee must at all times properly operate and maintain the facilities and systems of treatment and control and the appurtenances related to them that are installed or used by the Permittee to achieve compliance with the conditions of the permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. [Minn. R. 7007.0800, subp. 16(J)]
5.1.8	Operation and Maintenance Plan: Retain at the stationary source an operation and maintenance plan for all air pollution control equipment. At a minimum, the O & M plan shall identify all air pollution control equipment and control practices and shall include a preventative maintenance program for the equipment and practices, a description of (the minimum but not necessarily the only) corrective actions to be taken to restore the equipment and practices to proper operation to meet applicable permit conditions, a description of the employee training program for proper operation and maintenance of the control equipment and practices, and the records kept to demonstrate plan implementation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 16(J)]
5.1.9	Operation Changes: In any shutdown, breakdown, or deviation the Permittee must immediately or as soon as possible considering plant and personnel safety take all practical steps to modify operations to reduce the emission of any regulated air pollutant. No emissions units that have an unreasonable shutdown or breakdown frequency of process or control equipment are permitted to operate. [Minn. R. 7019.1000, subp. 4]
5.1.10	Fugitive Emissions: Do not cause or permit the handling, use, transporting, or storage of any material in a manner which may allow avoidable amounts of particulate matter to become airborne. Comply with all other requirements listed in Minn. R. 7011.0150. [Minn. R. 7011.0150]
5.1.11	Noise: The Permittee shall comply with the noise standards set forth in Minn. R. 7030.0010 to 7030.0080 at all times during the operation of any emission units. This is a state only requirement and is not enforceable by the EPA Administrator or citizens under the Clean Air Act. [Minn. R. 7030.0010-7030.0080]
5.1.12	Inspections: The Permittee shall comply with the inspection procedures and requirements as found in Minn. R. 7007.0800, subp. 9(A). [Minn. R. 7007.0800, subp. 9(A)]
5.1.13	The Permittee shall comply with the General Conditions listed in Minn. R. 7007.0800, subp. 16. [Minn. R. 7007.0800, subp. 16]
5.1.14	Performance Testing: Conduct all performance tests in accordance with Minn. R. ch. 7017 unless otherwise noted in this permit. [Minn. R. ch. 7017]
5.1.15	Performance Test Notifications and Submittals: Performance Test Notification and Plan: due 30 days before each Performance Test Performance Test Pre-test Meeting: due seven days before each Performance Test Performance Test Report: due 45 days after each Performance Test The Notification, Test Plan, and Test Report must be submitted in a format specified by the commissioner. [Minn. R. 7017.2017, Minn. R. 7017.2030, subps. 1-4, Minn. R. 7017.2035, subps. 1-2]

Requirement number	Requirement and citation
5.1.16	Limits set as a result of a performance test (conducted before or after permit issuance) apply until superseded as stated in the MPCA's Notice of Compliance letter granting preliminary approval. Preliminary approval is based on formal review of a subsequent performance test on the same unit as specified by Minn. R. 7017.2025, subp. 3. The limit is final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025, subp. 3]
5.1.17	Monitoring Equipment Calibration - The Permittee shall either: 1. Calibrate or replace required monitoring equipment every 12 months; or 2. Calibrate at the frequency stated in the manufacturer's specifications. For each monitor, the Permittee shall maintain a record of all calibrations, including the date conducted, and any corrective action that resulted. The Permittee shall include the calibration frequencies, procedures, and manufacturer's specifications (if applicable) in the Operations and Maintenance Plan. Any requirements applying to continuous emission monitors are listed separately in this permit. [Minn. R. 7007.0800, subp. 4(D)]
5.1.18	Operation of Monitoring Equipment: Unless noted elsewhere in this permit, monitoring a process or control equipment connected to that process is not necessary during periods when the process is shutdown, or during checks of the monitoring systems, such as calibration checks and zero and span adjustments. If monitoring records are required, they should reflect any such periods of process shutdown or checks of the monitoring system. [Minn. R. 7007.0800, subp. 4(D)]
5.1.19	Recordkeeping: Retain all records at the stationary source, unless otherwise specified within this permit, for five (5) years from the date of monitoring, sample, measurement, or report. Records which must be retained at this location include all calibration and maintenance records, all original recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Records must conform to the requirements listed in Minn. R. 7007.0800, subp. 5(A). [Minn. R. 7007.0800, subp. 5(C)]
5.1.20	Recordkeeping: Maintain records describing any insignificant modifications (as required by Minn. R. 7007.1250, subp. 3) or changes contravening permit terms (as required by Minn. R. 7007.1350, subp. 2), including records of the emissions resulting from those changes. [Minn. R. 7007.0800, subp. 5(B)]
5.1.21	If the Permittee determines that no permit amendment or notification is required prior to making a change, the Permittee must retain records of all calculations required under Minn. R. 7007.1200. For expiring permits, these records shall be kept for a period of five years from the date the change was made or until permit reissuance, whichever is longer. The records shall be kept at the stationary source for the current calendar year of operation and may be kept at the stationary source or office of the stationary source for all other years. The records may be maintained in either electronic or paper format. [Minn. R. 7007.1200, subp. 4]
5.1.22	These following 40 CFR 52.21(r)(6) requirements apply if a reasonable possibility (RP) as defined in 40 CFR 52.21(r)(6)(vi) exists that a proposed project, analyzed using the actual-to-projected-actual (ATPA) test (either by itself or as part of the hybrid test at 40 CFR 52.21(a)(2)(iv)(f)) and found to not be part of a major modification, may result in a significant emissions increase (SEI). If the ATPA test is not used for the project, or if there is no RP that the proposed project could result in a SEI, these requirements do not apply to that project. The Permittee is only subject to the Preconstruction Documentation requirement for a project where a RP occurs only within the meaning of 40 CFR 52.21(r)(6)(vi)(b). Even though a particular modification is not subject to New Source Review (NSR), or where there isn't a RP that a proposed project could result in a SEI, a permit amendment, recordkeeping, or notification may still be required by Minn. R. 7007.1150 - 7007.1500. [Minn. R. 7007.0800, subp. 2(A), Title I Condition: 40 CFR 52.21(r)(6) and Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.1.23	Preconstruction Documentation -- Before beginning actual construction on a project, the Permittee shall document the following: 1. Project description 2. Identification of any emission unit whose emissions of an NSR pollutant could be affected 3. Pre-change potential emissions of any affected existing emission unit, and the projected post-change potential emissions of any affected existing or new emission unit. 4. A description of the applicability test used to determine that the project is not a major modification for any regulated NSR pollutant, including the baseline actual emissions, the projected actual emissions, the amount of emissions excluded due to increases not associated with the modification and that the emission unit could have accommodated during the baseline period, an explanation of why the amounts were excluded, and any creditable contemporaneous increases and decreases that were considered in the determination. The Permittee shall maintain records of this documentation. [Minn. R. 7007.0800, subps. 4-5, Minn. R. 7007.1200, subp. 4, Title I Condition: 40 CFR 52.21(r)(6) and Minn. R. 7007.3000]
5.1.24	The Permittee shall monitor the actual emissions of any regulated NSR pollutant that could increase as a result of the project and that were analyzed using the ATPA test, and the potential emissions of any regulated NSR pollutant that could increase as a result of the project and that were analyzed using potential emissions in the hybrid test. The Permittee shall calculate and maintain a record of the sum of the actual and potential (if the hybrid test was used in the analysis) emissions of the regulated pollutant, in tons per year on a calendar year basis, for a period of five years following resumption of regular operations after the change, or for a period of 10 years following resumption of regular operations after the change if the project increases the design capacity of or potential to emit of any unit associated with the project. [Minn. R. 7007.0800, subps. 4-5, Title I Condition: 40 CFR 52.21(r)(6) and Minn. R. 7007.3000]
5.1.25	The Permittee must submit a report to the Agency if the annual summed (actual, plus potential if used in hybrid test) emissions differ from the preconstruction projection and exceed the baseline actual emissions by a significant amount as listed at 40 CFR 52.21(b)(23). Such report shall be submitted to the Agency within 60 days after the end of the year in which the exceedances occur. The report shall contain: a. The name and ID number of the Facility, and the name and telephone number of the Facility contact person. b. The annual emissions (actual, plus potential if any part of the project was analyzed using the hybrid test) for each pollutant for which the preconstruction projection and significant emissions increase are exceeded. c. Any other information, such as an explanation as to why the summed emissions differ from the preconstruction projection. [Minn. R. 7007.0800, subps. 4-5, Title I Condition: 40 CFR 52.21(r)(6) and Minn. R. 7007.3000]
5.1.26	Shutdown Notifications: Notify the commissioner at least 24 hours in advance of a planned shutdown of any control equipment or process equipment if the shutdown would cause any increase in the emissions of any regulated air pollutant. If the Permittee does not have advance knowledge of the shutdown, the Permittee must notify the commissioner as soon as possible after the shutdown. However, notification is not required in the circumstances outlined in items A, B, and C of Minn. R. 7019.1000, subp. 3. At the time of notification, the owner or operator must inform the commissioner of the cause of the shutdown and the estimated duration. The owner or operator must notify the commissioner when the shutdown is over. [Minn. R. 7019.1000, subp. 3]

Requirement number	Requirement and citation
5.1.27	Breakdown Notifications: Notify the commissioner within 24 hours of a breakdown of more than one hour of any control equipment or process equipment if the breakdown causes any increase in the emissions of any regulated air pollutant. The 24-hour time period starts when the breakdown was discovered or reasonably should have been discovered by the owner or operator. However, notification is not required in the circumstances outlined in items A, B, and C of Minn. R. 7019.1000, subp. 2. At the time of notification or as soon as possible thereafter, the Permittee must inform the commissioner of the cause of the breakdown and the estimated duration. The Permittee must notify the commissioner when the breakdown is over. [Minn. R. 7019.1000, subp. 2]
5.1.28	Notification of Deviations Endangering Human Health or the Environment: Immediately after discovery of the deviation or immediately after when the deviation reasonably should have been discovered, notify the commissioner either orally or by e-mail, or telephone the state duty officer at 800-422-0798 or 651-649-5451, of any deviation from permit conditions that could endanger human health or the environment. [Minn. R. 7019.1000, subp. 1]
5.1.29	Notification of Deviations Endangering Human Health or the Environment Report: Within two working days of discovery, notify the commissioner in writing of any deviation from permit conditions that could endanger human health or the environment. Include the following information in this written description: 1. the cause of the deviation; 2. the exact dates of the period of the deviation, if the deviation has been corrected; 3. whether or not the deviation has been corrected; 4. the anticipated time by which the deviation is expected to be corrected, if not yet corrected; and 5. steps taken or planned to reduce, eliminate, and prevent reoccurrence of the deviation. [Minn. R. 7019.1000, subp. 1]
5.1.30	Relocation Notification Form: due 48 hours before change in location. Submit notification on a form approved by the Commissioner. [Minn. R. 7007.0800, subp. 12(C)]
5.1.31	Application for Permit Amendment: If a permit amendment is needed, submit an application in accordance with the requirements of Minn. R. 7007.1150 through Minn. R. 7007.1500. Submittal dates vary, depending on the type of amendment needed. Upon adoption of a new or amended federal applicable requirement, and if there are three or more years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150 - 7007.1500]
5.1.32	Extension Requests: The Permittee may apply for an Administrative Amendment to extend a deadline in a permit by no more than 120 days, provided the proposed deadline extension meets the requirements of Minn. R. 7007.1400, subp. 1(H). Performance testing deadlines from the General Provisions of 40 CFR pt. 60 and pt. 63 are examples of deadlines for which the MPCA does not have authority to grant extensions and therefore do not meet the requirements of Minn. R. 7007.1400, subp. 1(H). [Minn. R. 7007.1400, subp. 1(H)]
5.1.33	Within 15 days of a request from the Commissioner, the Permittee must provide a complete summary of all performance tests required at the facility including the subject item, pollutant, most recent test date (if applicable), and the date of the next test in an approved format. [Minn. R. 7007.0800, subp. 16(L)]
5.1.34	Emission Inventory Report: due on or before April 1 of each calendar year following permit issuance. Submit in a format specified by the Commissioner. [Minn. R. 7019.3000-7019.3100]
5.1.35	Emission Fees: due 30 days after receipt of an MPCA bill. [Minn. R. 7002.0005-7002.0085]

Requirement number	Requirement and citation
5.1.36	The Permittee must submit a Risk Management Plan (RMP) under 40 CFR pt. 68. Each owner or operator of a stationary source, at which a regulated substance is present above a threshold quantity in a process, shall design and implement an accidental release prevention program. An initial RMP must be submitted no later than the latest of the following dates: 1) June 21, 1999; 2) Three years after the date on which a regulated substance is first listed under 40 CFR 68.130; or 3) The date on which a regulated substance is first present above a threshold quantity in a process. A full update and resubmission of the RMP is required at least once every five years. The five-year anniversary date is reset whenever the Permittee fully updates and resubmits their RMP. Submit RMPs as specified by EPA as of the date of submission. [40 CFR pt. 68]
5.1.37	Mercury Emissions Reduction Plan Implementation: The Permittee must implement and comply with the mercury emissions reduction plan, as approved by the Commissioner. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0502, Minn. R. 7007.0800, subp. 2(A)]
5.1.38	Mercury Emissions Reduction Plan Information Requests: The Permittee shall respond to MPCA information requests regarding the Permittee's submitted mercury emission reduction plan under review within the timeframe specified in the information request or within the timeframe extended in agreement with the MPCA. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0800, subp. 16(L), Minn. R. 7007.0800, subp. 2(A)]
5.1.39	Mercury Reduction Plan Implementation Reports: The Permittee must submit annual progress reports to the commissioner by April 1 of each year starting with the year following plan approval until one full year after achievement of the reduction as described in the plan. The report must provide the status of facility modifications and actions taken in the preceding 12 months on each of the plan elements as identified in Minn. R. 7007.0502, subp. 5. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0502, subp. 8, Minn. R. 7007.0800, subp. 16(L), Minn. R. 7007.0800, subp. 2(A)]
5.1.40	Mercury Reduction Plan Modifications: The Permittee may request modification of the approved mercury emissions reduction plan or enforceable agreement by submitting a written request to the commissioner. The request must include: (1) a description of the modification; (2) reasons for the modification; and (3) if the request is to modify the mercury reduction, the information required under Minn. R. 7007.0502, subp. 5(A)(1), for the requested new reduction. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0502, subp. 9(A), Minn. R. 7007.0800, subp. 2(A)]
5.1.41	Mercury Reduction Plan Modifications: The Permittee may not implement any proposed plan modifications until the commissioner approves the modification, issues an amended permit, or revises an enforceable agreement, as applicable. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0502, subp. 9(B), Minn. R. 7007.0800, subp. 2(A)]

Requirement number	Requirement and citation
COMG 37	Regional Haze and Facility-wide NOx Limits
5.2.1	Nitrogen Oxides <= 5000 pounds per hour 24-hour block average from all five waste gas stacks combined (EQUI 3, EQUI 146, EQUI 179, EQUI 279, EQUI 280; STRU 225, STRU 208, STRU 60, STRU 155, and STRU 69) at Permit Issuance. [Minn. R. 7007.3000, Title I Condition: 40 CFR 52.21(p)(visibility)]
5.2.2	Nitrogen Oxides <= 7300 tons per year 365-day rolling sum from all five waste gas stacks combined (EQUI 3, EQUI 146, EQUI 179, EQUI 279, EQUI 280; STRU 225, STRU 208, STRU 60, STRU 155, and STRU 69). [Minn. R. 7007.3000, Title I Condition: 40 CFR 52.21(p)(visibility)]
5.2.3	Nitrogen Oxides: Emissions Monitoring: The Permittee must use a CEMS to measure emissions as specified at EQUI 3, EQUI 146, EQUI 179, EQUI 279, and EQUI 280. Additional monitoring requirements are listed under the subject items COMG 73, COMG 74, COMG 75, COMG 76, and COMG 77. [40 CFR 52.1235(c)(1), Minn. R. 7007.3000, Minn. R. 7017.1006, Title I Condition: 40 CFR 52.21(p)(visibility)]
5.2.4	Nitrogen Oxides: Daily Recordkeeping: Each day, the Permittee shall calculate and record the following: 1) The NOx emissions for the previous day using CEMs data. 2) The 365-day rolling sum NOx emissions for the previous 365-day period by summing the daily NOx emissions data for the previous 365 days. [Title I Condition: 40 CFR 52.21(p)(visibility) & Minn. R. 7007.3000]
5.2.5	Nitrogen Oxides <= 1.6 pounds per million Btu 30-day rolling average. To determine the aggregate emission rate, the combined NOX emissions from lines 3, 4, 5, 6 and 7 (EQUI 3, EQUI 146, EQUI 179, EQUI 279, EQUI 280) shall be divided by the total heat input to the five lines (in MMBTU) during every rolling 30-day period. [40 CFR 52.1235(b)(1)(iii)]
5.2.6	Nitrogen Oxides: The Permittee shall calculate and record the aggregate emission rate and 30-day rolling average each day. [40 CFR 52.1235(b)(1)(iii)]
5.2.7	Sulfur Dioxide <= 498 pounds per hour 30-day rolling average when all lines EQUI 3, EQUI 146, EQUI 179, EQUI 279, and EQUI 280, are producing flux pellets. [40 CFR 52.1235(b)(2)(iii)]
5.2.8	Sulfur Dioxide <= 630 pounds per hour 30-day rolling average when EQUI 3, EQUI 146, and EQUI 179 (Lines 3-5) are producing acid pellets and EQUI 279, and EQUI 280 (Lines 6-7) are producing flux pellets. [40 CFR 52.1235(b)(2)(iii)]
5.2.9	Sulfur Dioxide <= 800 pounds per hour 30-day rolling average when all lines EQUI 3, EQUI 146, EQUI 179, EQUI 279, and EQUI 280, are producing acid pellets. [40 CFR 52.1235(b)(2)(iii)]
5.2.10	Sulfur Dioxide: The permittee shall calculate compliance with the Sulfur Dioxide emission limits above using a weighted average as follows: $(L_{30}) = (498 \cdot (n_f) + 630 \cdot (n_{af}) + 800 \cdot (n_a)) / 30$ where: (L ₃₀) = the limit for a given 30-day averaging period; (n _f) = the number of days in the 30 day period that the facility is producing flux pellets on lines 3-7; (n _{af}) = the number of days in the 30 day period that the facility is producing acid pellets on lines 3-5 and flux pellets on lines 6 and 7; and (n _a) = the number of days in the 30 day period that the facility is producing acid pellets on lines 3-7. [40 CFR 52.1235(b)(2)(iii)]
5.2.11	Sulfur Dioxide: Emissions Monitoring: The Permittee must use a CEMS to measure emissions as specified at EQUI 3, EQUI 146, EQUI 179, EQUI 279, and EQUI 280. Additional monitoring requirements are listed under the subject items COMG 73, COMG 74, COMG 75, COMG 76, and COMG 77. [40 CFR 52.1235(c)(2), Minn. R. 7017.1006]

Requirement number	Requirement and citation
5.2.12	The Permittee must limit Sulfur Content of Fuel <= 0.60 percent by weight 30-day block average for any coal burned. [40 CFR 52.1235(b)(2)(iii)]
5.2.13	The Permittee must comply with all applicable recordkeeping requirements in 40 CFR 52.1235(d). [40 CFR 52.1235(d)]
5.2.14	The Permittee must comply with all applicable recordkeeping requirements in 40 CFR 52.1235(e). [40 CFR 52.1235(e)]
COMG 38	Line 6 and 7 Combined Limits
5.3.1	Volatile Organic Compounds <= 35 tons per year 12-month rolling sum for the combustion of wood waste (wood, wood bark, and sawdust) at Lines 6 and 7 combined. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2)]
5.3.2	Carbon Monoxide <= 90 tons per year 12-month rolling sum for the combustion of wood waste (wood, wood bark, and sawdust) at Lines 6 and 7 combined. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2)]
5.3.3	Wood waste: Daily Recordkeeping. On each day of operation, the Permittee must calculate, record, and maintain a record of the total weight of wood waste combusted in COMG 38 units. [Minn. R. 7007.0800, subps. 4-5, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.3.4	VOCs: Monthly Recordkeeping. By the 15th of the month, the Permittee must calculate and record the following using the formulas specified in this permit: 1) The total wood waste burned in COMG 38 units in the previous calendar month using the daily usage records. 2) The total VOC emissions for the previous month using the formulas specified in this permit; and 3) The 12-month rolling sum total VOC emissions for the previous 12-month period by summing the monthly emissions data for the previous 12 months. [Minn. R. 7007.0800, subps. 4-5]
5.3.5	VOC: Monthly Calculation. The Permittee must calculate COMG 38 VOC emissions using the following equation: $\text{VOC Emissions (tons/month)} = Q \times H \times F / 1,000,000$ Where: Q = Amount of wood waste used in the previous month, in lb/month. H = Heating value of wood waste used in the previous month, based on the most recent quarterly fuel sample, in BTU/lb. F = Emission factor of wood waste from the most recent MPCA-approved performance test, in lb VOC/MMBtu. At the time of permit issuance, the VOC emission factor is 0.0075 lb/MMBtu. [Minn. R. 7007.0800, subps. 4-5]
5.3.6	CO: Monthly Recordkeeping. By the 15th of the month, the Permittee must calculate and record the following using the formulas specified in this permit: 1) The total wood waste burned in COMG 38 units in the previous calendar month using the daily usage records. 2) The total CO emissions for the previous month using the formulas specified in this permit; and 3) The 12-month rolling sum total CO emissions for the previous 12-month period by summing the monthly emissions data for the previous 12 months. [Minn. R. 7007.0800, subps. 4-5]
5.3.7	CO: Monthly Calculation. The Permittee must calculate COMG 38 CO emissions using the following equation: $\text{CO Emissions (tons/month)} = Q \times H \times F / 1,000,000$ Where: Q = Amount of wood waste used in the previous month, in lb/month. H = Heating value of wood waste used in the previous month, based on the most recent quarterly fuel sample, in BTU/lb.

Requirement number	Requirement and citation
	F = Emission factor of wood waste from the most recent MPCA-approved performance test, in lb CO/MMBtu. At the time of permit issuance, the CO emission factor is 0.091 lb/MMBtu. [Minn. R. 7007.0800, subps. 4-5]
5.3.8	Heating Value of Wood Waste Fuel: A representative wood waste fuel sample must be collected and analyzed for heating value (BTU/lb) once each calendar quarter. [Minn. R. 7007.0800, subps. 4-5]
COMG 39	Taconite MACT Existing Ore Crushing and Handling
5.4.1	The Permittee must limit Filterable Particulate Matter ≤ 0.008 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all ore crushing and handling emission units in this group. The Permittee must determine the flow-weighted mean concentration of filterable particulate matter emissions following the procedures in 40 CFR 63.9621(b). [40 CFR 63.9590(a), 40 CFR 63.9621(b), 40 CFR 63.9634(b)(1), 40 CFR pt. 63, subp. RRRRR (Table 1)(Item 1)Existing, Minn. R. 7011.8030]
5.4.2	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9581; 40 CFR 63.9582(a)-(d); 40 CFR 63.9583(a) & (e); 40 CFR 63.9590(a); 40 CFR 63.9600(a); 40 CFR 63.9610(a) & (c); 40 CFR 63.9621(a) & (b); 40 CFR 63.9630(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (b); 40 CFR 63.9637; 40 CFR 63.9640(a) & (d); 40 CFR 63.9641(a)-(h); 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; 40 CFR 63.9650; 40 CFR 63.9652; 40 CFR pt. 63, subp. RRRRR, Table 1, Item 1 (Existing); and 40 CFR pt. 63, subp. RRRRR, Table 2, as specified elsewhere in this permit. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.4.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. A as follows: 40 CFR 63.1(a); 40 CFR 63.1(b)(1) & (3); 40 CFR 63.1(c)(1)-(2) & (6); 40 CFR 63.2; 40 CFR 63.3; 40 CFR 63.4(a)-(c);

Requirement number	Requirement and citation
	40 CFR 63.5(a)-(b) & (d)-(f); 40 CFR 63.6(a)(1); 40 CFR 63.6(b)(1)-(5); 40 CFR 63.6(c)(1)-(2); 40 CFR 63.6(e)(1)(iii); 40 CFR 63.6(f)(2)-(3); 40 CFR 63.6(g); 40 CFR 63.6(i)(1)-(14) & (16); 40 CFR 63.6(j); 40 CFR 63.7(a)(3) & (4); 40 CFR 63.7(b)-(d); 40 CFR 63.7(e)(2)-(4); 40 CFR 63.7(f)-(h); 40 CFR 63.8(b); 40 CFR 63.8(c)(1)(ii); 40 CFR 63.8(c)(2), (3), & (5)-(8); 40 CFR 63.8(d)(1)-(2); 40 CFR 63.8(e); 40 CFR 63.8(f)(1)-(5); 40 CFR 63.8(g)(1)-(4); 40 CFR 63.9; 40 CFR 63.10(a)(5)-(7); 40 CFR 63.10(b)(1); 40 CFR 63.10(b)(2)(iii), (vi)-(xii), & (xiv); 40 CFR 63.10(b)(3); 40 CFR 63.10(c)(1)-(6) & (10)-(14); 40 CFR 63.10(d)(1)-(2) & (4); 40 CFR 63.10(e)(2) & (3); 40 CFR 63.10(f); 40 CFR 63.12; 40 CFR 63.13; 40 CFR 63.14; and 40 CFR 63.15. A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
COMG 40	Taconite MACT Existing Finished Pellet Handling
5.5.1	The Permittee must limit Filterable Particulate Matter <= 0.008 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all finished pellet handling emission units in this group. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(b). [40 CFR 63.9590(a), 40 CFR 63.9621(b), 40 CFR 63.9634(b)(1), 40 CFR pt. 63, subp. RRRRR (Table 1)(Item 5)Existing, Minn. R. 7011.8030]
5.5.2	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9581; 40 CFR 63.9582(a)-(d); 40 CFR 63.9583(a) & (e); 40 CFR 63.9590(a); 40 CFR 63.9600(a); 40 CFR 63.9610(a) & (c); 40 CFR 63.9621(a) & (b); 40 CFR 63.9630(c); 40 CFR 63.9633; 40 CFR 63.9634(a) & (b); 40 CFR 63.9637; 40 CFR 63.9640(a) & (d); 40 CFR 63.9641(a)-(h); 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; 40 CFR 63.9650; 40 CFR 63.9652; 40 CFR pt. 63, subp. RRRRR, Table 1, Item 5 (Existing); and 40 CFR pt. 63, subp. RRRRR, Table 2, as specified elsewhere in this permit. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.5.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. A as follows: 40 CFR 63.1(a); 40 CFR 63.1(b)(1) & (3); 40 CFR 63.1(c)(1)-(2) & (6); 40 CFR 63.2; 40 CFR 63.3; 40 CFR 63.4(a)-(c); 40 CFR 63.5(a)-(b) & (d)-(f); 40 CFR 63.6(a)(1); 40 CFR 63.6(b)(1)-(5); 40 CFR 63.6(c)(1)-(2); 40 CFR 63.6(e)(1)(iii); 40 CFR 63.6(f)(2)-(3); 40 CFR 63.6(g); 40 CFR 63.6(i)(1)-(14) & (16); 40 CFR 63.6(j); 40 CFR 63.7(a)(3) & (4); 40 CFR 63.7(b)-(d); 40 CFR 63.7(e)(2)-(4); 40 CFR 63.7(f)-(h); 40 CFR 63.8(b); 40 CFR 63.8(c)(1)(ii); 40 CFR 63.8(c)(2), (3), & (5)-(8);

Requirement number	Requirement and citation
COMG 73	Line 3 CEMS
5.7.1	Nitrogen Oxides: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 146. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(1), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.7.2	Sulfur Dioxide: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 146. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(2), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.7.3	Flue Gas Flow: Emissions Monitoring: The owner or operator shall use a flow gas monitor to measure flue gas flow rate for determining the quantity of emissions from concentration measurements of SO₂ and NO_x from EQUI 146. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(3), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.7.4	Continuous Operation: CEMS must be operated and data recorded during all periods of emission unit operation including periods of emission unit start-up, shutdown, or malfunction except for periods of acceptable monitor downtime. This requirement applies whether or not a numerical emission limit applies during these periods. A CEMS must not be bypassed except in emergencies where failure to bypass would endanger human health, safety, or plant equipment. [Minn. R. 7017.1090]
5.7.5	Monitoring Data: All data points collected by a CEMS shall be used to calculate individual hourly emission averages unless another applicable requirement requires more frequent averaging. Each hourly average starts at the beginning of the hour and ends at the beginning of the following hour. In order for an hour of data to be considered valid, it must contain the following minimum number of data points: A. four data points, equally spaced, if the emission unit operated during the entire hour; B. two data points, at least 15 minutes apart, during periods of monitor calibration or routine maintenance; C. one data point if the emission unit operated for 15 minutes or less during the hour. Monitoring data shall be recorded in the same units of measurement and averaging period as the facility's emission standard. [Minn. R. 7017.1160]
5.7.6	QA Plan: Develop and implement a written quality assurance plan that covers each CEMS. The plan must be on site and available for inspection within 30 days after monitor certification. The plan must include the manufacturer's spare parts list for each CEMS and require that those parts be kept at the facility unless the Commissioner gives written approval to exclude specific spare parts from the list. [Minn. R. 7017.1170, subp. 2]
5.7.7	CEMS Daily Calibration Drift (CD) Test: The CD must be quantified and recorded at zero (low-level) and upscale (high-level) gas concentrations at least once daily according to the procedures listed in Minn. R. 7017.1170, subp. 3(A) and (B), 40 CFR 60.13(d)(1) or 40 CFR pt. 75, Appendix B as applicable for each pollutant concentration, each diluent monitor, and for each monitor range. If no span value is specified in the applicable requirement or in a compliance document, the Permittee must use a span value equivalent to 1.5 times the emission limit. [Minn. R. 7017.1170, subp. 3]
5.7.8	Relative Accuracy Test Audit (RATA) Notification: due 30 days before CEMS Relative Accuracy Test Audit (RATA). [Minn. R. 7017.1180, subp. 2]
5.7.9	Recordkeeping: The owner or operator must retain records of all CEMS monitoring data and support

Requirement number	Requirement and citation
	information for a period of five years from the date of the monitoring sample, measurement or report. Records shall be kept at the source. [Minn. R. 7017.1130]
COMG 74	Line 4 CEMS
5.8.1	Nitrogen Oxides: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 279. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(1), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.8.2	Sulfur Dioxide: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 279. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(2), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.8.3	Flue Gas Flow: Emissions Monitoring: The owner or operator shall use a flow gas monitor to measure flue gas flow rate for determining the quantity of emissions from concentration measurements of SO₂ and NO_x from EQUI 279. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(3), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.8.4	Continuous Operation: CEMS must be operated and data recorded during all periods of emission unit operation including periods of emission unit start-up, shutdown, or malfunction except for periods of acceptable monitor downtime. This requirement applies whether or not a numerical emission limit applies during these periods. A CEMS must not be bypassed except in emergencies where failure to bypass would endanger human health, safety, or plant equipment. [Minn. R. 7017.1090]
5.8.5	Monitoring Data: All data points collected by a CEMS shall be used to calculate individual hourly emission averages unless another applicable requirement requires more frequent averaging. Each hourly average starts at the beginning of the hour and ends at the beginning of the following hour. In order for an hour of data to be considered valid, it must contain the following minimum number of data points: A. four data points, equally spaced, if the emission unit operated during the entire hour; B. two data points, at least 15 minutes apart, during periods of monitor calibration or routine maintenance; C. one data point if the emission unit operated for 15 minutes or less during the hour. Monitoring data shall be recorded in the same units of measurement and averaging period as the facility's emission standard. [Minn. R. 7017.1160]
5.8.6	QA Plan: Develop and implement a written quality assurance plan that covers each CEMS. The plan must be on site and available for inspection within 30 days after monitor certification. The plan must include the manufacturer's spare parts list for each CEMS and require that those parts be kept at the facility unless the Commissioner gives written approval to exclude specific spare parts from the list. [Minn. R. 7017.1170, subp. 2]
5.8.7	CEMS Daily Calibration Drift (CD) Test: The CD must be quantified and recorded at zero (low-level) and upscale (high-level) gas concentrations at least once daily according to the procedures listed in Minn. R. 7017.1170, subp. 3(A) and (B), 40 CFR 60.13(d)(1) or 40 CFR pt. 75, Appendix B as applicable for each pollutant concentration, each diluent monitor, and for each monitor range. If no span value is specified in the applicable requirement or in a compliance document, the Permittee must use a span value equivalent to 1.5 times the emission limit. [Minn. R. 7017.1170, subp. 3]

Requirement number	Requirement and citation
5.8.8	Relative Accuracy Test Audit (RATA) Notification: due 30 days before CEMS Relative Accuracy Test Audit (RATA). [Minn. R. 7017.1180, subp. 2]
5.8.9	Recordkeeping: The owner or operator must retain records of all CEMS monitoring data and support information for a period of five years from the date of the monitoring sample, measurement or report. Records shall be kept at the source. [Minn. R. 7017.1130]
COMG 75	Line 5 CEMS
5.9.1	Nitrogen Oxides: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 280. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(1), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.9.2	Sulfur Dioxide: Emissions Monitoring: The owner or operator shall use a CEMS to measure emissions from EQUI 280. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(2), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.9.3	Flue Gas Flow: Emissions Monitoring: The owner or operator shall use a flow gas monitor to measure flue gas flow rate for determining the quantity of emissions from concentration measurements of SO₂ and NO_x from EQUI 280. The CEMS must meet the requirements of 40 CFR 52.1235(c)(4)(i) through (xiv), as applicable. [40 CFR 52.1235(c)(3), 40 CFR 52.1235(c)(4), Minn. R. 7017.1006]
5.9.4	Continuous Operation: CEMS must be operated and data recorded during all periods of emission unit operation including periods of emission unit start-up, shutdown, or malfunction except for periods of acceptable monitor downtime. This requirement applies whether or not a numerical emission limit applies during these periods. A CEMS must not be bypassed except in emergencies where failure to bypass would endanger human health, safety, or plant equipment. [Minn. R. 7017.1090]
5.9.5	Monitoring Data: All data points collected by a CEMS shall be used to calculate individual hourly emission averages unless another applicable requirement requires more frequent averaging. Each hourly average starts at the beginning of the hour and ends at the beginning of the following hour. In order for an hour of data to be considered valid, it must contain the following minimum number of data points: A. four data points, equally spaced, if the emission unit operated during the entire hour; B. two data points, at least 15 minutes apart, during periods of monitor calibration or routine maintenance; C. one data point if the emission unit operated for 15 minutes or less during the hour. Monitoring data shall be recorded in the same units of measurement and averaging period as the facility's emission standard. [Minn. R. 7017.1160]
5.9.6	QA Plan: Develop and implement a written quality assurance plan that covers each CEMS. The plan must be on site and available for inspection within 30 days after monitor certification. The plan must include the manufacturer's spare parts list for each CEMS and require that those parts be kept at the facility unless the Commissioner gives written approval to exclude specific spare parts from the list. [Minn. R. 7017.1170, subp. 2]
5.9.7	CEMS Daily Calibration Drift (CD) Test: The CD must be quantified and recorded at zero (low-level) and upscale (high-level) gas concentrations at least once daily according to the procedures listed in Minn. R. 7017.1170, subp. 3(A) and (B), 40 CFR 60.13(d)(1) or 40 CFR pt. 75, Appendix B as applicable for each pollutant concentration, each diluent monitor, and for each monitor range.

Requirement number	Requirement and citation
	If no span value is specified in the applicable requirement or in a compliance document, the Permittee must use a span value equivalent to 1.5 times the emission limit. [Minn. R. 7017.1170, subp. 3]

	facility unless the Commissioner gives written approval to exclude specific spare parts from the list. [Minn. R. 7017.1170, subp. 2]
5.11.7	CEMS Daily Calibration Drift (CD) Test: The CD must be quantified and recorded at zero (low-level) and upscale (high-level) gas concentrations at least once daily according to the procedures listed in Minn. R. 7017.1170, subp. 3(A) and (B), 40 CFR 60.13(d)(1) or 40 CFR pt. 75, Appendix B as applicable for each pollutant concentration, each diluent monitor, and for each monitor range. If no span value is specified in the applicable requirement or in a compliance document, the Permittee must use a span value equivalent to 1.5 times the emission limit. [Minn. R. 7017.1170, subp. 3]
5.11.8	Relative Accuracy Test Audit (RATA) Notification: due 30 days before CEMS Relative Accuracy Test Audit (RATA). [Minn. R. 7017.1180, subp. 2]
5.11.9	Recordkeeping: The owner or operator must retain records of all CEMS monitoring data and support information for a period of five years from the date of the monitoring sample, measurement or report. Records shall be kept at the source. [Minn. R. 7017.1130]
EQUI 3	L6 Rotary Kiln
5.12.1	The Permittee shall vent emissions from EQUI 3 to control equipment meeting the requirements of TREA 143 whenever EQUI 3 operates. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.2	Fuel Restrictions: The Permittee shall combust at the kiln burner natural gas, coal, fuel oil, and/or types of biomass that are specified in Appendix N of this permit; and at the preheat burners natural gas. Other fuels, as allowed under 40 CFR Part 241, may be combusted for a short period of time during a trial burn as specified and approved by a major amendment to this permit. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.12.3	Fluorides <= 1.62 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.4	Carbon Monoxide <= 74.0 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.5	Volatile Organic Compounds <= 54.3 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.6	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.12.7	Sulfur Dioxide <= 4.0 pounds per million Btu heat input when burning solid fossil fuels or 2.0 pounds per million Btu heat input when burning liquid fuels. If more than one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. [Minn. R. 7011.0610, subp. 2]
5.12.8	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.12.9	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
5.12.10	Temperature >= 1400 degrees Fahrenheit 3-hour rolling average monitored at the kiln exit. This limit does not apply during EQUI 3 startup or shutdown. If the 3-hour rolling average operating temperature is below the minimum temperature limit, this must be reported as a deviation. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.11	Kiln exit temperature continuous monitoring. The Permittee must install, maintain, and operate at all times a temperature monitoring device(s) at the kiln exit. A minimum of one thermocouple shall be installed at the kiln exit. Each temperature monitoring device shall be certified by the manufacturer to have an accuracy of +/-5% over its operating range. The temperature monitoring device shall be operated continuously, and data recorded during all periods of operation. Continuously is defined as determining at least one data point in each 15-minute time interval. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.12.12	The Permittee must maintain a continuous hard copy readout or computer disk file of the temperature readings and calculated 3-hour rolling average temperature at the kiln exit. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.13	Burner and grate inspections. The Permittee must inspect the kiln and grate burners every 18 months. Each inspection must be conducted no more than 18 months after the previous inspection. The inspection must verify at a minimum: -proper alignment of kiln burners and grate burners; and -good operating condition of combustion air fans for the kiln burners and grate burners. The Permittee must keep a written record of the inspection and any action resulting from the inspection. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.12.14	The Permittee must limit Filterable Particulate Matter ≤ 0.01 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all stacks from the indurating furnace. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(c). [40 CFR 63.9590(a), 40 CFR 63.9621(c), 40 CFR 63.9634(c)(1), 40 CFR pt. 63, subp. RRRRR (Table 1)(Item 3)Existing, Minn. R. 7011.8030]
5.12.15	The Permittee must limit Mercury ≤ 0.000014 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.6(j), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 2)(Item 1), Minn. R. 7011.0050, subp. 1(B), Minn. R. 7011.8030]
5.12.16	The Permittee must limit Hydrogen Chloride ≤ 0.046 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024 amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.6(j), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 3)(Item 1), Minn. R. 7011.0050, subp. 1(B), Minn. R. 7011.8030]

Requirement number	Requirement and citation
5.12.17	The Permittee must limit Hydrogen fluoride ≤ 0.012 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024 amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.6(j), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 3)(Item 1), Minn. R. 7011.0050, subp. 1(B), Minn. R. 7011.8030]
5.12.18	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9581; 40 CFR 63.9582(a)-(d); 40 CFR 63.9583(a),(e), & (f); 40 CFR 63.9590(a); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(4); 40 CFR 63.9610(a),(c) & (d); 40 CFR 63.9621(a) & (c); 40 CFR 63.9623(a)(5)-(8); 40 CFR 63.9630(b); 40 CFR 63.9633; 40 CFR 63.9634(a) & (c); 40 CFR 63.9636(a)(4); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9640(a),(d) & (e); 40 CFR 63.9641(a)-(h); 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; 40 CFR 63.9650; 40 CFR 63.9652; 40 CFR pt. 63, subp. RRRRR, Table 1, Item 3 (Existing); 40 CFR pt. 63, subp. RRRRR, Table 2, Item 1(1)(individual limit); 40 CFR pt. 63, subp. RRRRR, Table 3, Item 1; and 40 CFR pt. 63, subp. RRRRR, Table 4, as specified elsewhere in this permit. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3.

Requirement number	Requirement and citation
	Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. 5.12.22	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. A as follows: 40 CFR 63.1(a); 40 CFR 63.1(b)(1) & (3); 40 CFR 63.1(c)(1)-(2) & (6); 40 CFR 63.2; 40 CFR 63.3; 40 CFR 63.4(a)-(c); 40 CFR 63.5(a)-(b) & (d)-(f); 40 CFR 63.6(a)(1); 40 CFR 63.6(b)(1)-(5); 40 CFR 63.6(c)(1)-(2); 40 CFR 63.6(e)(1)(iii); 40 CFR 63.6(f)(2)-(3); 40 CFR 63.6(g); 40 CFR 63.6(i)(1)-(14) & (16); 40 CFR 63.6(j); 40 CFR 63.7(a)(3) & (4); 40 CFR 63.7(b)-(d); 40 CFR 63.7(e)(2)-(4);

Requirement number	Requirement and citation
	40 CFR 63.7(f)-(h); 40 CFR 63.8(b); 40 CFR 63.8(c)(1)(ii); 40 CFR 63.8(c)(2), (3), & (5)-(8); 40 CFR 63.8(d)(1)-(2); 40 CFR 63.8(e); 40 CFR 63.8(f)(1)-(5); 40 CFR 63.8(g)(1)-(4); 40 CFR 63.9; 40 CFR 63.10(a)(5)-(7); 40 CFR 63.10(b)(1); 40 CFR 63.10(b)(2)(iii), (vi)-(xii), & (xiv); 40 CFR 63.10(b)(3); 40 CFR 63.10(c)(1)-(6) & (10)-(14); 40 CFR 63.10(d)(1)-(2) & (4); 40 CFR 63.10(e)(2) & (3); 40 CFR 63.10(f); 40 CFR 63.12; 40 CFR 63.13; 40 CFR 63.14; and 40 CFR 63.15. A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.12.23	Bypass Event: During any period in which a bypass stack is open, the Permittee is prohibited from feeding greenballs/pellets to EQU 3 and fuel use is limited to natural gas. [Minn. R. 7007.0800, subp. 2(A)]
5.12.24	Bypass Event Recordkeeping: The Permittee shall record the following each time a bypass event occurs; - Beginning date and time of event - End date and time of event - Duration of event (min) - Reason for bypass event - Fuel type combusted during event - Greenball/pellet feed rate during event. [Minn. R. 7007.0800, subps. 4-5]
5.12.25	Fuel Sampling: The Permittee shall obtain and maintain a fuel supplier certification of the sulfur weight percent and heating value for each shipment of liquid or solid fuel. In absence of fuel certification, the Permittee shall sample liquid or solid fuel after each delivery but not more than once each calendar week, when multiple deliveries are made. Current ASTM method(s) must be used to determine sulfur content in percent by weight and fuel heating value. The Permittee shall maintain records of fuel deliveries and analysis results. [Minn. R. 7007.0800, subps. 4-5]
EQUI 5	Secondary Crusher L10
5.13.1	The Permittee shall vent emissions from EQUI 5 to control equipment meeting the requirements of TREA 52 whenever EQUI 5 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.13.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.13.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 6	Conveyor Transfer 008 to 009
5.14.1	The Permittee shall vent emissions from EQUI 6 to control equipment meeting the requirements of TREA 53 whenever EQUI 6 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.14.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.14.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 7	Conveyor Transfer 008 to 009
5.15.1	The Permittee shall vent emissions from EQUI 7 to control equipment meeting the requirements of TREA 55 whenever EQUI 7 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.15.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.15.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 8	Conveyor Transfer 008-009
5.16.1	The Permittee shall vent emissions from EQUI 8 to control equipment meeting the requirements of TREA 230 whenever EQUI 8 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.16.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.16.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 9	Secondary Crusher L11
5.17.1	The Permittee shall vent emissions from EQUI 9 to control equipment meeting the requirements of TREA 57 whenever EQUI 9 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.17.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.17.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 10	Secondary Crusher L14
5.18.1	The Permittee shall vent emissions from EQUI 10 to control equipment meeting the requirements of TREA 248 whenever EQUI 10 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.18.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.18.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]

5.45.1	The Permittee shall vent emissions from EQUI 46 to control equipment meeting the requirements of TREA 108 whenever EQUI 46 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.45.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
5.45.3	The Permittee must limit Filterable Particulate Matter <= 0.05 grams per dry standard cubic meter (0.022 gr/dscf). [40 CFR 60.382(a)(1), Minn. R. 7011.2700]
5.45.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. LL, as follows: 40 CFR 60.380; 40 CFR 60.381; 40 CFR 60.382(a)(1); 40 CFR 60.383; 40 CFR 60.384; 40 CFR 60.385(a); 40 CFR 60.385(b)-(e); and 40 CFR 60.386(a), (b)(1), & (c). A copy of 40 CFR pt. 60, subp. LL is included in Appendix E. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. LL, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.2700]
5.45.5	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. A as follows: 40 CFR 60.1(a)-(b), & (c); 40 CFR 60.2; 40 CFR 60.3; 40 CFR 60.4; 40 CFR 60.5; 40 CFR 60.6(a) & (b); 40 CFR 60.7(a)(1), (3), (4), & (6); 40 CFR 60.7(b); 40 CFR 60.8; 40 CFR 60.9; 40 CFR 60.11(a)-(d), (f), & (g); 40 CFR 60.11(e)(1)-(3) & (6)-(8); 40 CFR 60.12; 40 CFR 60.14(a)-(c) & (e)-(g); 40 CFR 60.15; 40 CFR 60.17; and 40 CFR 60.19. A copy of 40 CFR pt. 60, subp. A is included in Appendix C. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(A), Minn. R. 7017.1010 & 7017.2015, subp. 2,

EQUI 88	S3 Bentonite Storage

Requirement number	Requirement and citation
5.73.1	The Permittee shall vent emissions from EQUI 88 to control equipment meeting the requirements of TREA 135 whenever EQUI 88 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.73.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.73.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 89	S3 Bentonite Storage
5.74.1	The Permittee shall vent emissions from EQUI 89 to control equipment meeting the requirements of TREA 135 whenever EQUI 89 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.74.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.74.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 90	L6 Bentonite Day Bin
5.75.1	The Permittee shall vent emissions from EQUI 90 to control equipment meeting the requirements of TREA 136 whenever EQUI 90 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.75.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.75.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 91	L6 Bentonite Day Bin
5.76.1	The Permittee shall vent emissions from TREA 91 to control equipment meeting the requirements of EQUI 136 whenever TREA 92 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.76.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.76.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 92	L6 Bentonite Day Bin
5.77.1	The Permittee shall vent emissions from EQUI 92 to control equipment meeting the requirements of TREA 136 whenever EQUI 92 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.77.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.77.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 93	L6 Bentonite Blending
5.78.1	The Permittee shall vent emissions from EQUI 93 to control equipment meeting the requirements of TREA 137 whenever EQUI 93 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.78.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.78.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further

Requirement number	Requirement and citation
	reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 94	L6 Bentonite Blending
5.79.1	The Permittee shall vent emissions from EQUI 94 to control equipment meeting the requirements of TREA 137 whenever EQUI 94 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.79.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.79.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 95	L6 Bentonite Blending
5.80.1	The Permittee shall vent emissions from EQUI 95 to control equipment meeting the requirements of TREA 137 whenever EQUI 95 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.80.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.80.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 96	L6 Grate Feed
5.81.1	The Permittee shall vent emissions from EQUI 96 to control equipment meeting the requirements of TREA 138 whenever EQUI 96 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.81.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.81.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 97	L6 Grate Discharge
5.82.1	The Permittee shall vent emissions from EQUI 97 to control equipment meeting the requirements of TREA 139 whenever EQUI 97 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.82.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.82.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 98	L7 Bentonite Day Bin
5.83.1	The Permittee shall vent emissions from EQUI 98 to control equipment meeting the requirements of TREA 130 whenever EQUI 98 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.83.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]

5.110.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 140	Storage Bin L17,18
5.111.1	The Permittee shall vent emissions from EQUI 140 to control equipment meeting the requirements of TREA 216 whenever EQUI 140 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.111.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.111.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 141	Storage Bin L17,18
5.112.1	The Permittee shall vent emissions from EQUI 141 to control equipment meeting the requirements of TREA 216 whenever EQUI 141 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.112.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.112.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 142	Storage Bin L17,18
5.113.1	The Permittee shall vent emissions from EQUI 142 to control equipment meeting the requirements of TREA 216 whenever EQUI 142 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.113.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.113.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 143	L3 Bentonite Blending
5.114.1	The Permittee shall vent emissions from EQUI 143 to control equipment meeting the requirements of TREA 94 whenever EQUI 143 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.114.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.114.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 144	L3 Bentonite Blending
5.115.1	The Permittee shall vent emissions from EQUI 144 to control equipment meeting the requirements of TREA 94 whenever EQUI 144 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.115.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.115.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 146	L3 Rotary Kiln
5.116.1	The Permittee shall vent emissions from EQUI 146 to control equipment meeting the requirements of TREA 224 whenever EQUI 146 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.2	Fuel Restrictions: The Permittee shall combust at the kiln burner natural gas, fuel oil, and/or types of biomass that are specified in Appendix N of this permit; and at the preheat burners natural gas. Other fuels, as allowed under 40 CFR Part 241, may be combusted for a short period of time during a trial burn as specified and approved by a major amendment to this permit. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.116.3	Fluorides <= 1.04 pounds per hour 3-hour average at Line 3 Waste Gas Stack (STRU 225). [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.4	Carbon Monoxide <= 68.8 pounds per hour 3-hour average at Line 3 Waste Gas Stack (STRU 225). [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.5	Volatile Organic Compounds <= 51.6 pounds per hour 3-hour average, as propane, at Line 3 Waste Gas Stack (STRU 225). [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.6	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.116.7	Sulfur Dioxide <= 2.0 pounds per million Btu heat input when burning liquid fossil fuels. If more than

Requirement number	Requirement and citation
	one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. The potential to emit from the unit is 0.396 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.0610, subp. 2]
5.116.8	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.116.9	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.116.10	Temperature >= 1400 degrees Fahrenheit 3-hour rolling average monitored at the kiln exit. This limit does not apply during EQUI 146 startup or shutdown. If the 3-hour rolling average operating temperature is below the minimum temperature limit, this must be reported as a deviation. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.11	Kiln exit temperature continuous monitoring. The Permittee must install, maintain, and operate at all times a temperature monitoring device(s) at the kiln exit. A minimum of one thermocouple shall be installed at the kiln exit. Each temperature monitoring device shall be certified by the manufacturer to have an accuracy of +/-5% over its operating range. The temperature monitoring device shall be operated continuously, and data recorded during all periods of operation. Continuously is defined as determining at least one data point in each 15-minute time interval. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.12	The Permittee must maintain a continuous hard copy readout or computer disk file of the temperature readings and calculated 3-hour rolling average temperature at the kiln exit. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.13	Burner and grate inspections. The Permittee must inspect the kiln and grate burners every 18 months. Each inspection must be conducted no more than 18 months after the previous inspection. The inspection must verify at a minimum: -proper alignment of kiln burners and grate burners; and -good operating condition of combustion air fans for the kiln burners and grate burners. The Permittee must keep a written record of the inspection and any action resulting from the inspection. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.116.14	The Permittee must limit Filterable Particulate Matter <= 0.01 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all stacks from the indurating furnace. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(c). [40 CFR 63.9590(a), 40 CFR 63.9621(c), 40 CFR 63.9634(c)(1), 40 CFR pt. 63, subp. RRRRR(Table 1)(Item 3)Existing, Minn. R. 7011.8030]
5.116.15	The Permittee must limit Mercury <= 0.000014 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in

5.116.17	The Permittee must limit Hydrogen fluoride $\leq$ 0.012 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 3)(Item 1), Minn. R. 7011.8030]
5.116.18	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9581; 40 CFR 63.9582(a)-(d); 40 CFR 63.9583(a),(e), & (f); 40 CFR 63.9590(a); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(4); 40 CFR 63.9610(a),(c) & (d); 40 CFR 63.9621(a) & (c); 40 CFR 63.9623(a)(5)-(8); 40 CFR 63.9630(b); 40 CFR 63.9633; 40 CFR 63.9634(a) & (c); 40 CFR 63.9636(a)(4); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9640(a),(d) & (e);

A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.116.23	Bypass Event: During any period in which a bypass stack is open, the Permittee is prohibited from feeding greenballs/pellets to EQU 146 and fuel use is limited to natural gas. [Minn. R. 7007.0800, subp. 2(A)]
5.116.24	Bypass Event Recordkeeping: The Permittee shall record the following each time a bypass event occurs;

Requirement number	Requirement and citation
	- Beginning date and time of event - End date and time of event - Duration of event (min) - Reason for bypass event - Fuel type combusted during event - Greenball/pellet feed rate during event. [Minn. R. 7007.0800, subps. 4-5]
5.116.25	Fuel Sampling: The Permittee shall obtain and maintain a fuel supplier certification of the sulfur weight percent and heating value for each shipment of liquid or solid fuel. In absence of fuel certification, the Permittee shall sample liquid or solid fuel after each delivery but not more than once each calendar week, when multiple deliveries are made. Current ASTM method(s) must be used to determine sulfur content in percent by weight and fuel heating value. The Permittee shall maintain records of fuel deliveries and analysis results. [Minn. R. 7007.0800, subps. 4-5]
EQUI 147	L3 Cooler Discharge
5.117.1	The Permittee shall vent emissions from EQUI 147 to control equipment meeting the requirements of TREA 174 whenever EQUI 147 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.117.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.117.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 148	L3 041/046 Conveyor Belt Vent
5.118.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.118.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 149	S1 Conveyor Transfer 042-043
5.119.1	The Permittee shall vent emissions from EQUI 149 to control equipment meeting the requirements of TREA 176 whenever EQUI 149 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.119.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.119.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 150	L3 Conveyor Transfer 041-042
5.120.1	The Permittee shall vent emissions from EQUI 150 to control equipment meeting the requirements of TREA 177 whenever EQUI 150 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.120.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.120.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 151	S1 Bentonite Storage Bin
5.121.1	The Permittee shall vent emissions from EQUI 151 to control equipment meeting the requirements of TREA 97 whenever EQUI 151 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.121.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]

Requirement number	Requirement and citation
5.121.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 152	L2,3 Bentonite Day Bin
5.122.1	The Permittee shall vent emissions from EQUI 152 to control equipment meeting the requirements of TREA 98 whenever EQUI 152 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.122.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.122.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 153	L2,3 Bentonite Day Bin
5.123.1	The Permittee shall vent emissions from EQUI 153 to control equipment meeting the requirements of TREA 98 whenever EQUI 153 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.123.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.123.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 154	S2 Bentonite Storage Bin
5.124.1	The Permittee shall vent emissions from EQUI 154 to control equipment meeting the requirements of TREA 100 whenever EQUI 154 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

5.140.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 175	L7 Bentonite Day Bin
5.141.1	The Permittee shall vent emissions from EQUI 175 to control equipment meeting the requirements of TREA 130 whenever EQUI 175 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.141.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.141.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 176	L7 Bentonite Blending
5.142.1	The Permittee shall vent emissions from EQUI 176 to control equipment meeting the requirements of TREA 145 whenever EQUI 176 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.142.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.142.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 177	L7 Bentonite Blending
5.143.1	The Permittee shall vent emissions from EQUI 177 to control equipment meeting the requirements of TREA 145 whenever EQUI 177 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.143.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.143.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 178	L7 Grate Discharge
5.144.1	The Permittee shall vent emissions from EQUI 178 to control equipment meeting the requirements of

Requirement number	Requirement and citation
	TREA 147 whenever EQUI 178 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.144.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.144.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 179	L7 Rotary Kiln
5.145.1	The Permittee shall vent emissions from EQUI 179 to control equipment meeting the requirements of TREA 151 whenever EQUI 179 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.2	Fuel Restrictions: The Permittee shall combust at the kiln burner natural gas, coal, fuel oil, and/or types of biomass that are specified in Appendix N of this permit; and at the preheat burners natural gas. Other fuels, as allowed under 40 CFR Part 241, may be combusted for a short period of time during a trial burn as specified and approved by a major amendment to this permit. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.145.3	Fluorides <= 1.62 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.4	Carbon Monoxide <= 74.0 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.5	Volatile Organic Compounds <= 54.3 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.6	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.145.7	Sulfur Dioxide <= 4.0 pounds per million Btu heat input when burning solid fossil fuels or 2.0 pounds per million Btu heat input when burning liquid fuels. If more than one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. [Minn. R. 7011.0610, subp. 2]
5.145.8	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.145.9	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.145.10	Temperature >= 1400 degrees Fahrenheit 3-hour rolling average monitored at the kiln exit. This limit does not apply during EQUI 179 startup or shutdown. If the 3-hour rolling average operating temperature is below the minimum temperature limit, this must be reported as a deviation. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.11	Kiln exit temperature continuous monitoring. The Permittee must install, maintain, and operate at all times a temperature monitoring device(s) at the kiln exit. A minimum of one thermocouple shall be installed at the kiln exit. Each temperature monitoring device shall be certified by the manufacturer to have an accuracy of +/-5% over its operating range. The temperature monitoring device shall be operated continuously, and data recorded during all periods of operation. Continuously is defined as determining at least one data point in each 15-minute time interval. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.12	The Permittee must maintain a continuous hard copy readout or computer disk file of the temperature readings and calculated 3-hour rolling average temperature at the kiln exit. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.13	Burner and grate inspections. The Permittee must inspect the kiln and grate burners every 18 months. Each inspection must be conducted no more than 18 months after the previous inspection. The

Requirement number	Requirement and citation
	inspection must verify at a minimum: -proper alignment of kiln burners and grate burners; and -good operating condition of combustion air fans for the kiln burners and grate burners. The Permittee must keep a written record of the inspection and any action resulting from the inspection. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.145.14	The Permittee must limit Filterable Particulate Matter ≤ 0.01 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all stacks from the indurating furnace. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(c). [40 CFR 63.9590(a), 40 CFR 63.9621(c), 40 CFR 63.9634(c)(1), 40 CFR pt. 63, subp. RRRRR(Table 1)(Item 3)Existing, Minn. R. 7011.8030]
5.145.15	The Permittee must limit Mercury ≤ 0.000014 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 2)(Item 1), Minn. R. 7011.8030]
5.145.16	The Permittee must limit Hydrogen Chloride ≤ 0.046 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 3)(Item 1), Minn. R. 7011.8030]
5.145.17	The Permittee must limit Hydrogen fluoride ≤ 0.012 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments,

Requirement number	Requirement and citation
	with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR 63.a(1), 40 CFR pt. 63, subp. RRRRR(Table 3)(Item 1), Minn. R. 7011.8030]
5.145.18	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9581; 40 CFR 63.9582(a)-(d); 40 CFR 63.9583(a),(e), & (f); 40 CFR 63.9590(a); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(4); 40 CFR 63.9610(a),(c) & (d); 40 CFR 63.9621(a) & (c); 40 CFR 63.9623(a)(5)-(8); 40 CFR 63.9630(b); 40 CFR 63.9633; 40 CFR 63.9634(a) & (c); 40 CFR 63.9636(a)(4); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9640(a)-(d) & (e); 40 CFR 63.9641(a)-(h); 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; 40 CFR 63.9650; 40 CFR 63.9652; 40 CFR pt. 63, subp. RRRRR, Table 1, Item 3 (Existing); 40 CFR pt. 63, subp. RRRRR, Table 2, Item 1(1)(individual limit); 40 CFR pt. 63, subp. RRRRR, Table 3, Item 1; and 40 CFR pt. 63, subp. RRRRR, Table 4, as specified elsewhere in this permit. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp.

Requirement number	Requirement and citation
	RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.145.19	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, to demonstrate compliance with the hydrogen chloride and hydrogen fluoride emission limits in Table 3 of 40 CFR pt. 63, subp. RRRRR, the Permittee must: - meet the applicable hydrogen chloride and hydrogen fluoride emission limits in Table 3 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable hydrogen chloride and hydrogen fluoride emission limits; - conduct initial performance tests for hydrogen chloride and hydrogen fluoride on all stacks associated with each indurating furnace no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(l); - determine compliance with the applicable hydrogen chloride and hydrogen fluoride emission limits by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(g) and (i); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(1) and (3); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(f) and (h); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(g) through (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(i)(1) and (2), (k), and (l); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.145.20	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, if the Permittee elects not to demonstrate compliance with the mercury emission limit

Requirement number	Requirement and citation
	using a mercury CEMS, the Permittee must: - meet the applicable mercury emission limit in Table 2 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable mercury emission limit; - conduct initial performance tests for mercury on all stacks associated with each indurating furnace no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(k)(1); - determine compliance with the applicable mercury emission limit by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(h); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(2); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(g) and (j); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(h) and (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(j)(1) and (2), (k), (l), and (n); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.145.23	Bypass Event: During any period in which a bypass stack is open, the Permittee is prohibited from feeding greenballs/pellets to EQU 179 and fuel use is limited to natural gas. [Minn. R. 7007.0800, subp. 2(A)]
5.145.24	Bypass Event Recordkeeping: The Permittee shall record the following each time a bypass event occurs; - Beginning date and time of event - End date and time of event - Duration of event (min) - Reason for bypass event - Fuel type combusted during event - Greenball/pellet feed rate during event. [Minn. R. 7007.0800, subps. 4-5]
5.145.25	Fuel Sampling: The Permittee shall obtain and maintain a fuel supplier certification of the sulfur weight percent and heating value for each shipment of liquid or solid fuel. In absence of fuel certification, the Permittee shall sample liquid or solid fuel after each delivery but not more than once each calendar week, when multiple deliveries are made. Current ASTM method(s) must be used to determine sulfur content in percent by weight and fuel heating value. The Permittee shall maintain records of fuel deliveries and analysis results. [Minn. R. 7007.0800, subps. 4-5]

EQUI 273	L5 Pellet Scrn Fine Belt
5.221.1	The Permittee shall vent emissions from EQUI 273 to control equipment meeting the requirements of TREA 132 whenever EQUI 273 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.221.2	The Permittee must limit Filterable Particulate Matter <= 0.05 grams per dry standard cubic meter (0.022 gr/dscf). [40 CFR 60.382(a)(1), Minn. R. 7011.2700]
5.221.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. LL, as follows: 40 CFR 60.380; 40 CFR 60.381; 40 CFR 60.382(a)(1); 40 CFR 60.383; 40 CFR 60.384;

Requirement number	Requirement and citation
	40 CFR 60.385(a); 40 CFR 60.385(b)-(e); and 40 CFR 60.386(a), (b)(1), & (c). A copy of 40 CFR pt. 60, subp. LL is included in Appendix E. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. LL, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.2700]
5.221.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. A as follows: 40 CFR 60.1(a), (b), & (c); 40 CFR 60.2; 40 CFR 60.3; 40 CFR 60.4; 40 CFR 60.5; 40 CFR 60.6(a) & (b); 40 CFR 60.7(a)(1), (3), (4), & (6); 40 CFR 60.7(b); 40 CFR 60.8; 40 CFR 60.9; 40 CFR 60.11(a)-(d), (f), & (g); 40 CFR 60.11(e)(1)-(3) & (6)-(8); 40 CFR 60.12; 40 CFR 60.14(a)-(c) & (e)-(g); 40 CFR 60.15; 40 CFR 60.17; and 40 CFR 60.19. A copy of 40 CFR pt. 60, subp. A is included in Appendix C. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(A), Minn. R. 7017.1010 & 7017.2015, subp. 2, Minn. R. 7019.0100]
EQUI 274	Diesel Generator
5.222.1	Opacity <= 20 percent opacity once operating temperatures have been attained. [Minn. R. 7011.2300, subp. 1]
5.222.2	Sulfur Dioxide <= 0.0015 pounds per million Btu heat input. The potential to emit from the unit is 0.0015 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.2300, subp. 2(B)]
5.222.3	Fuel type: Diesel only, by design. [Minn. R. 7005.0100, subp. 35a]
5.222.4	Hours of Operation: The Permittee shall maintain documentation on site that the unit is an emergency generator by design that qualifies under the U.S. EPA memorandum entitled "Calculating Potential to Emit (PTE) for Emergency Generators" dated September 6, 1995, that allows calculation of potential emissions based on 500 operating hours per year. [Minn. R. 7007.0800, subps. 4-5]
5.222.5	The Permittee shall keep records of fuel type and usage on a monthly basis. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subp. 5]
5.222.6	Fuel Supplier Certification: The Permittee shall obtain and maintain a fuel supplier certification for each shipment of diesel fuel oil, certifying that the sulfur content does not exceed 0.0015 percent by weight. [Minn. R. 7007.0800, subps. 4-5]
EQUI 275	Limestone Dump Pocket
5.223.1	The Permittee shall vent emissions from EQUI 275 to control equipment meeting the requirements of TREA 90 whenever EQUI 275 operates. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.223.2	Opacity <= 7 percent opacity. [40 CFR 60.672(a), Minn. R. 7011.3350]
5.223.3	Filterable Particulate Matter <= 0.022 grains per dry standard cubic foot. [40 CFR 60.672(a), 40 CFR pt. 60, subp. 000(Table 2), Minn. R. 7011.3350]
5.223.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. 000 as follows: 40 CFR 60.670(a); 40 CFR 60.670(d)-(f); 40 CFR 60.671; 40 CFR 60.672(a); 40 CFR 60.673; 40 CFR 60.675(a)-(b); 40 CFR 60.676(a)(3); 40 CFR 60.676(f); 40 CFR 60.676(j); 40 CFR 60.676(k); 40 CFR pt. 60, subp. 000, Table 1; and 40 CFR pt. 60, subp. 000, Table 2. A copy of 40 CFR pt. 60, subp. 000 is included in Appendix F. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. 000, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.3550]
5.223.5	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. A as follows: 40 CFR 60.1; 40 CFR 60.2; 40 CFR 60.3; 40 CFR 60.4; 40 CFR 60.5; 40 CFR 60.7(a)-(b); 40 CFR 60.8; 40 CFR 60.9; 40 CFR 60.11(a)-(d); 40 CFR 60.11(e)(1)-(3) & (6)-(8); 40 CFR 60.11(f)-(g); 40 CFR 60.12; 40 CFR 60.14(a)-(c) & (e)-(g); 40 CFR 60.15; 40 CFR 60.17; and

Requirement number	Requirement and citation
	40 CFR 60.19. A copy of 40 CFR pt. 60, subp. A is included in Appendix C. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(A), Minn. R. 7017.1010 & 7017.2015, subp. 2, Minn. R. 7019.0100]
EQUI 278	S3 Ben storage+unloading hopper
5.224.1	The Permittee shall vent emissions from EQUI 278 in parallel to control equipment meeting the requirements of TREA 89 and TREA 135 whenever EQUI 278 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.224.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.224.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 279	L4 Rotary Kiln
5.225.1	The Permittee shall vent emissions from EQUI 279 to control equipment meeting the requirements of TREA 37 whenever EQUI 279 operates. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.2	Fuel Restrictions: The Permittee shall combust at the kiln burner natural gas, fuel oil, and/or types of biomass that are specified in Appendix N of this permit; and at the preheat burners natural gas. Other fuels, as allowed under 40 CFR Part 241, may be combusted for a short period of time during a trial burn as specified and approved by a major amendment to this permit. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.225.3	Fluorides <= 1.62 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.4	Carbon Monoxide <= 98.6 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.5	Volatile Organic Compounds <= 74.0 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.6	Sulfur Dioxide <= 2.0 pounds per million Btu heat input when burning liquid fossil fuels. If more than one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. The potential to emit from the unit is 0.396 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.0610, subp. 2]
5.225.7	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.225.8	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.225.9	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.225.10	Temperature >= 1400 degrees Fahrenheit 3-hour rolling average monitored at the kiln exit. This limit does not apply during EQUI 279 startup or shutdown. If the 3-hour rolling average operating temperature is below the minimum temperature limit, this must be reported as a deviation. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.225.11	Kiln exit temperature continuous monitoring. The Permittee must install, maintain, and operate at all times a temperature monitoring device(s) at the kiln exit. A minimum of one thermocouple shall be installed at the kiln exit. Each temperature monitoring device shall be certified by the manufacturer to have an accuracy of +/-5% over its operating range. The temperature monitoring device shall be operated continuously, and data recorded during all periods of operation. Continuously is defined as determining at least one data point in each 15-minute time interval. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.12	The Permittee must maintain a continuous hard copy readout or computer disk file of the temperature readings and calculated 3-hour rolling average temperature at the kiln exit. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.13	Burner and grate inspections. The Permittee must inspect the kiln and grate burners every 18 months. Each inspection must be conducted no more than 18 months after the previous inspection. The inspection must verify at a minimum: -proper alignment of kiln burners and grate burners; and -good operating condition of combustion air fans for the kiln burners and grate burners. The Permittee must keep a written record of the inspection and any action resulting from the inspection. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.225.14	The Permittee must limit Filterable Particulate Matter ≤ 0.01 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all stacks from the indurating furnace. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(c). [40 CFR 63.9590(a), 40 CFR 63.9621(c), 40 CFR 63.9634(c)(1), 40 CFR pt. 63, subp. RRRRR(Table 1)(Item 3)Existing, Minn. R. 7011.8030]
5.225.15	The Permittee must limit Mercury ≤ 0.000014 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 2)(Item 1), Minn. R. 7011.8030]
5.225.16	The Permittee must limit Hydrogen Chloride ≤ 0.046 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp.

RRRRR, Table 4, as specified elsewhere in this permit. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if

Requirement number	Requirement and citation
	there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.225.19	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, to demonstrate compliance with the hydrogen chloride and hydrogen fluoride emission limits in Table 3 of 40 CFR pt. 63, subp. RRRRR, the Permittee must: - meet the applicable hydrogen chloride and hydrogen fluoride emission limits in Table 3 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable hydrogen chloride and hydrogen fluoride emission limits; - conduct initial performance tests for hydrogen chloride and hydrogen fluoride on all stacks associated with each indurating furnace no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(l); - determine compliance with the applicable hydrogen chloride and hydrogen fluoride emission limits by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(g) and (i); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(1) and (3); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(f) and (h); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(g) through (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(i)(1) and (2), (k), and (l); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6,

Requirement number	Requirement and citation
	2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.225.20	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, if the Permittee elects not to demonstrate compliance with the mercury emission limit using a mercury CEMS, the Permittee must: - meet the applicable mercury emission limit in Table 2 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable mercury emission limit; - conduct initial performance tests for mercury on all stacks associated with each indurating furnace no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(k)(1); - determine compliance with the applicable mercury emission limit by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(h); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(2); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(g) and (j); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(h) and (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(j)(1) and (2), (k), (l), and (n); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in

A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.225.23	Bypass Event: During any period in which a bypass stack is open, the Permittee is prohibited from feeding greenballs/pellets to EQU 279 and fuel use is limited to natural gas. [Minn. R. 7007.0800, subp. 2(A)]
5.225.24	Bypass Event Recordkeeping: The Permittee shall record the following each time a bypass event occurs; - Beginning date and time of event - End date and time of event - Duration of event (min) - Reason for bypass event - Fuel type combusted during event - Greenball/pellet feed rate during event. [Minn. R. 7007.0800, subps. 4-5]
5.225.25	Fuel Sampling: The Permittee shall obtain and maintain a fuel supplier certification of the sulfur weight percent and heating value for each shipment of liquid or solid fuel. In absence of fuel certification, the Permittee shall sample liquid or solid fuel after each delivery but not more than once each calendar week, when multiple deliveries are made. Current ASTM method(s) must be used to determine sulfur content in percent by weight and fuel heating value. The Permittee shall maintain records of fuel deliveries and analysis results. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
EQUI 280	L5 Rotary Kiln
5.226.1	The Permittee shall vent emissions from EQUI 280 to control equipment meeting the requirements of TREA 38 whenever EQUI 280 operates. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.2	Fuel Restrictions: The Permittee shall combust at the kiln burner natural gas, fuel oil, and/or types of biomass that are specified in Appendix N of this permit; and at the preheat burners natural gas. Other fuels, as allowed under 40 CFR Part 241, may be combusted for a short period of time during a trial burn as specified and approved by a major amendment to this permit. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.226.3	Fluorides <= 1.62 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.4	Carbon Monoxide <= 98.6 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.5	Volatile Organic Compounds <= 74.0 pounds per hour 3-hour average. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.6	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 2, Title I Condition: 40 CFR 52.21(j)(BACT) and Minn. R. 7007.3000]
5.226.7	Temperature >= 1400 degrees Fahrenheit 3-hour rolling average monitored at the kiln exit. This limit does not apply during EQUI 280 startup or shutdown. If the 3-hour rolling average operating temperature is below the minimum temperature limit, this must be reported as a deviation. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.8	Kiln exit temperature continuous monitoring. The Permittee must install, maintain, and operate at all times a temperature monitoring device(s) at the kiln exit. A minimum of one thermocouple shall be installed at the kiln exit. Each temperature monitoring device shall be certified by the manufacturer to have an accuracy of +/-5% over its operating range. The temperature monitoring device shall be operated continuously, and data recorded during all periods of operation. Continuously is defined as determining at least one data point in each 15-minute time interval. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.9	The Permittee must maintain a continuous hard copy readout or computer disk file of the temperature readings and calculated 3-hour rolling average temperature at the kiln exit. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.10	Burner and grate inspections. The Permittee must inspect the kiln and grate burners every 18 months. Each inspection must be conducted no more than 18 months after the previous inspection. The inspection must verify at a minimum: -proper alignment of kiln burners and grate burners; and -good operating condition of combustion air fans for the kiln burners and grate burners. The Permittee must keep a written record of the inspection and any action resulting from the inspection. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.226.11	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.226.12	Sulfur Dioxide <= 2.0 pounds per million Btu heat input when burning liquid fossil fuels. If more than one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. The potential to emit from the unit is 0.396 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.0610, subp. 2]
5.226.13	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]

Requirement number	Requirement and citation
5.226.14	The Permittee must limit Filterable Particulate Matter ≤ 0.01 grains per dry standard cubic foot 3-hour average measured as a flow-weighted mean concentration for all stacks from the indurating furnace. The Permittee must determine the flow-weighted mean concentration of front-half particulate matter emissions following the procedures in 40 CFR Section 63.9621(c). [40 CFR 63.9590(a), 40 CFR 63.9621(c), 40 CFR 63.9634(c)(1), 40 CFR pt. 63, subp. RRRRR(Table 1)(Item 3)Existing, Minn. R. 7011.8030]
5.226.15	The Permittee must limit Mercury ≤ 0.000014 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR 63.9583(f)(1), 40 CFR 63.9590(a), 40 CFR pt. 63, subp. RRRRR(Table 2)(Item 1), Minn. R. 7011.8030]
5.226.16	The Permittee must limit Hydrogen Chloride ≤ 0.046 pound per long ton of pellets produced by March 8, 2027. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. 5.226.19	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, to demonstrate compliance with the hydrogen chloride and hydrogen fluoride emission

Requirement number	Requirement and citation
	limits in Table 3 of 40 CFR pt. 63, subp. RRRRR, the Permittee must: - meet the applicable hydrogen chloride and hydrogen fluoride emission limits in Table 3 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable hydrogen chloride and hydrogen fluoride emission limits; - conduct initial performance tests for hydrogen chloride and hydrogen fluoride on all stacks associated with each indurating furnace no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(l); - determine compliance with the applicable hydrogen chloride and hydrogen fluoride emission limits by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(g) and (i); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(1) and (3); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(f) and (h); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(g) through (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(i)(1) and (2), (k), and (l); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.226.20	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, if the Permittee elects not to demonstrate compliance with the mercury emission limit using a mercury CEMS, the Permittee must: - meet the applicable mercury emission limit in Table 2 of 40 CFR pt. 63, subp. RRRRR by March 8, 2027; - meet the applicable operating limits for control devices used to meet the applicable mercury emission limit; - conduct initial performance tests for mercury on all stacks associated with each indurating furnace

Requirement number	Requirement and citation
	no later than 180 calendar days after March 8, 2027, in accordance with 40 CFR 63.9620(k)(1); - determine compliance with the applicable mercury emission limit by following the applicable test methods and procedures in 40 CFR 63.9621(d)(1) through (9); - submit a site-specific monitoring plan in accordance with 40 CFR 63.9631(i), if applicable; - establish applicable site-specific operating limits according to the procedures in 40 CFR 63.9622(h); - demonstrate initial compliance in accordance with 40 CFR 63.9623(c)(2); - conduct subsequent performance test in accordance with 40 CFR 63.9630(b); - install, operate, and maintain a continuous parameter monitoring system and monitor the applicable operating parameters, in accordance with 40 CFR 63.9631(g) and (j); - develop and make available for inspection upon request a site-specific monitoring plan that addresses the requirements in 40 CFR 63.9632(b)(1) through (7); - must meet the requirements for each CPMS in 40 CFR 63.9632(c)(1) and (2); - must conduct a performance evaluation of each CPMS and maintain the CPMS in continuous operation in accordance with your site-specific monitoring plan; - meet the applicable requirements for continuous parameter monitoring systems in 40 CFR 63.9632(h) and (i); - demonstrate continuous compliance in accordance with the applicable requirements of 40 CFR 63.9634(j)(1) and (2), (k), (l), and (n); - demonstrate continuous compliance with the operation and maintenance requirements by completing the applicable requirements of 40 CFR 63.9636(a)(1) through (4); - submit a notification of compliance status in accordance with 40 CFR 63.9640(e); and - keep all applicable records listed in 40 CFR 63.9642. Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.226.21	In addition to the other applicable requirements from 40 CFR pt. 63, subp. RRRRR found elsewhere in this permit, if the Permittee elects to demonstrate compliance with the mercury emission limit using a mercury CEMS, the Permittee is not required by 40 CFR pt. 63, subp. RRRRR to conduct performance testing for mercury or to establish and comply with operating limits for control devices used to reduce mercury emissions, and the Permittee must: - conduct a performance evaluation of each CEMS within 180 days of installation of the monitoring system, in accordance with 40 CFR 63.9620(k)(2); - determine compliance with the applicable mercury emission limit by using a 30-day rolling average of the 1-hour arithmetic average CEMS data, including CEMS data during startup and shutdown, in accordance with 40 CFR 63.9621(e); - calculate the 30-day rolling average of 1-hour arithmetic average emission concentrations, including CEMS data during startup and shutdown, in accordance with 40 CFR 63.9623(e); - comply with the requirements in 40 CFR 63.9631(k)(1)-(5); - comply with the requirements if 40 CFR 63.9634(j)(1); - must submit the results of the performance evaluation following the procedure specified in either 40 CFR 63.9641(i)(1) or (2) within 60 days after the date of completing each CEMS performance

Requirement number	Requirement and citation
	evaluation; - keep the applicable records specified in 40 CFR 63.9642(b)(1) through (5); and - keep records of the notifications required in 40 CFR 63.9642(f). Under authority provided in Section 112(i)(4) of the Clean Air Act (42 U.S.C. 7412(i)(4)) and according to Proclamation 10958 of July 17, 2025, the Permittee is exempt from compliance with the May 6, 2024, amendments to 40 CFR pt. 63, subp. RRRRR (89 FR 16408) (Taconite MACT amendments) for a period of two years beyond the Taconite MACT amendments' relevant compliance dates. This exemption applies to all compliance deadlines established under the Taconite MACT amendments, with each such deadline extended by two years from the date originally required for such deadline. The effect of this exemption is that, during each such 2-year period, the Permittee is subject to the emissions and compliance obligations that they are currently subject to under 40 CFR pt. 63, subp. RRRRR as that standard existed prior to the Taconite MACT amendments. A copy of the presidential proclamation, as published in the Federal Register on July 23, 2025 (90 FR 34743), is included in Appendix O. [40 CFR 63.4(a)(1), 40 CFR 63.6(j), 40 CFR 63.6(a)(1)(ii), 40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.226.22	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. A as follows: 40 CFR 63.1(a); 40 CFR 63.1(b)(1); 40 CFR 63.1(b)(3); 40 CFR 63.1(c)(1); 40 CFR 63.1(c)(2); 40 CFR 63.1(c)(6); 40 CFR 63.2; 40 CFR 63.3; 40 CFR 63.4(a); 40 CFR 63.4(b); 40 CFR 63.4(c); 40 CFR 63.5(a); 40 CFR 63.5(b); 40 CFR 63.5(d); 40 CFR 63.5(e); 40 CFR 63.5(f); 40 CFR 63.6(a)(1); 40 CFR 63.6(b)(1); 40 CFR 63.6(b)(2); 40 CFR 63.6(b)(3); 40 CFR 63.6(b)(4); 40 CFR 63.6(b)(5); 40 CFR 63.6(c)(1); 40 CFR 63.6(c)(2); 40 CFR 63.6(e)(1); 40 CFR 63.6(f)(2); 40 CFR 63.6(f)(3); 40 CFR 63.6(g); 40 CFR 63.6(i)(1); 40 CFR 63.6(i)(2); 40 CFR 63.6(i)(3); 40 CFR 63.6(i)(4); 40 CFR 63.6(i)(5);

	40 CFR 63.10(f); 40 CFR 63.12; 40 CFR 63.13; 40 CFR 63.14; 40 CFR 63.15(a); and 40 CFR 63.15(b). A copy of 40 CFR pt. 63, subp. A is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, subp. 1(B), Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.226.23	Bypass Event: During any period in which a bypass stack is open, the Permittee is prohibited from feeding greenballs/pellets to EQU 280 and fuel use is limited to natural gas. [Minn. R. 7007.0800, subp. 2(A)]
5.226.24	Bypass Event Recordkeeping: The Permittee shall record the following each time a bypass event occurs; - Beginning date and time of event - End date and time of event - Duration of event (min) - Reason for bypass event - Fuel type combusted during event - Greenball/pellet feed rate during event. [Minn. R. 7007.0800, subps. 4-5]
5.226.25	Fuel Sampling: The Permittee shall obtain and maintain a fuel supplier certification of the sulfur weight percent and heating value for each shipment of liquid or solid fuel. In absence of fuel certification, the Permittee shall sample liquid or solid fuel after each delivery but not more than once each calendar week, when multiple deliveries are made. Current ASTM method(s) must be used to determine sulfur content in percent by weight and fuel heating value. The Permittee shall maintain records of fuel deliveries and analysis results. [Minn. R. 7007.0800, subps. 4-5]
EQUI 281	Step III Coarse Crusher Pan Feeders
5.227.1	The Permittee shall vent emissions from EQUI 281 in parallel to control equipment meeting the requirements of TREA 120, and TREA 121 whenever EQUI 281 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.227.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.227.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 282	Zinc Melt Furnace
5.228.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.228.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.228.3	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.228.4	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]

Requirement number	Requirement and citation
EQUI 283	Secondary Crusher L5
5.229.1	The Permittee shall vent emissions from EQUI 283 to control equipment meeting the requirements of TREA 267 whenever EQUI 283 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.229.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.229.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 284	Conveyor Transfer 008-009
5.230.1	The Permittee shall vent emissions from EQUI 284 to control equipment meeting the requirements of TREA 230 whenever EQUI 284 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.230.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.230.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 285	Secondary Crusher L12
5.231.1	The Permittee shall vent emissions from EQUI 285 to control equipment meeting the requirements of TREA 58 whenever EQUI 285 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.231.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.231.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 286	Secondary Crusher L13
5.232.1	The Permittee shall vent emissions from EQUI 286 to control equipment meeting the requirements of TREA 59 whenever EQUI 286 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.232.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.232.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 287	Secondary Crusher L15
5.233.1	The Permittee shall vent emissions from EQUI 287 to control equipment meeting the requirements of TREA 61 whenever EQUI 287 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.233.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.233.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 288	Conveyor Transfer 003
5.234.1	The Permittee shall vent emissions from EQUI 288 to control equipment meeting the requirements of TREA 63 whenever EQUI 288 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

	TREA 66 whenever EQUI 297 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.240.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.240.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 298	Tertiary Crusher L19
5.241.1	The Permittee shall vent emissions from EQUI 298 to control equipment meeting the requirements of TREA 67 whenever EQUI 298 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.241.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.241.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 299	Tertiary Crusher L20
5.242.1	The Permittee shall vent emissions from EQUI 299 to control equipment meeting the requirements of TREA 68 whenever EQUI 299 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.242.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.242.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 300	Tertiary Crusher L21
5.243.1	The Permittee shall vent emissions from EQUI 300 to control equipment meeting the requirements of TREA 69 whenever EQUI 300 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.243.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.243.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 301	Tertiary Crusher L22
5.244.1	The Permittee shall vent emissions from EQUI 301 to control equipment meeting the requirements of TREA 70 whenever EQUI 301 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.244.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.244.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 303	Tertiary Crusher L24
5.245.1	The Permittee shall vent emissions from EQUI 303 to control equipment meeting the requirements of TREA 72 whenever EQUI 303 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.245.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.245.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]

EQUI 304	Tertiary Crusher L25
5.246.1	The Permittee shall vent emissions from EQUI 306 to control equipment meeting the requirements of TREA 75 whenever EQUI 306 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.246.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.246.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 305	Tertiary Crusher L26
5.247.1	The Permittee shall vent emissions from EQUI 305 to control equipment meeting the requirements of TREA 74 whenever EQUI 305 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.247.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.247.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 309	Conveyor Transfer 005-006
5.248.1	The Permittee shall vent emissions from EQUI 309 to control equipment meeting the requirements of TREA 215 whenever EQUI 309 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.248.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.248.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 310	Conveyor Transfer 005-006
5.249.1	The Permittee shall vent emissions from EQUI 310 to control equipment meeting the requirements of TREA 215 whenever EQUI 310 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.249.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.249.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 311	Zinc Melt Furnace
5.250.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.250.2	Sulfur Dioxide <= 2.0 pounds per million Btu heat input when burning liquid fossil fuels. If more than one fuel is burned simultaneously, calculate the emission limit as indicated in Minn. R. 7011.0605. The potential to emit from the unit is 0.5 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.0610, subp. 2]
5.250.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.250.4	Fuel type: Natural gas and No. 2 fuel oil only, by design. [Minn. R. 7005.0100, subp. 35a]
5.250.5	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
EQUI 312	Zinc Melt Furnace

EQUI 331	Conveyor Transfer 003 to 004
5.270.1	The Permittee shall vent emissions from EQUI 331 to control equipment meeting the requirements of TREA 222 whenever EQUI 331 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.270.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.270.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 332	Conveyor Transfer 003 to 004
5.271.1	The Permittee shall vent emissions from EQUI 332 to control equipment meeting the requirements of TREA 222 whenever EQUI 332 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.271.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.271.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 333	Conveyor Transfer 003 to 004
5.272.1	The Permittee shall vent emissions from EQUI 333 to control equipment meeting the requirements of TREA 222 whenever EQUI 333 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.272.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]

Requirement number	Requirement and citation
5.272.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 335	Tertiary Crusher L1
5.273.1	The Permittee shall vent emissions from EQUI 335 to control equipment meeting the requirements of TREA 194 whenever EQUI 335 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.273.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.273.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 336	Tertiary Crusher L3
5.274.1	The Permittee shall vent emissions from EQUI 336 to control equipment meeting the requirements of TREA 196 whenever EQUI 336 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.274.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.274.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 337	Tertiary Crusher L5
5.275.1	The Permittee shall vent emissions from EQUI 337 to control equipment meeting the requirements of TREA 198 whenever EQUI 337 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.275.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.275.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 338	Tertiary Crusher L6
5.276.1	The Permittee shall vent emissions from EQUI 338 to control equipment meeting the requirements of TREA 199 whenever EQUI 338 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.276.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.276.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 339	Secondary Crusher L6
5.277.1	The Permittee shall vent emissions from EQUI 339 to control equipment meeting the requirements of TREA 48 whenever EQUI 339 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.277.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.277.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 340	Secondary Crusher L8
5.278.1	The Permittee shall vent emissions from EQUI 340 to control equipment meeting the requirements of

Requirement number	Requirement and citation
	TREA 50 whenever EQUI 340 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.278.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.278.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 341	Secondary Crusher L9
5.279.1	The Permittee shall vent emissions from EQUI 341 to control equipment meeting the requirements of TREA 51 whenever EQUI 341 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.279.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.279.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 342	Conveyor Transfer 008 to 009
5.280.1	The Permittee shall vent emissions from EQUI 342 to control equipment meeting the requirements of TREA 53 whenever EQUI 342 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.280.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.280.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 343	Conveyor Transfer 008 to 009
5.281.1	The Permittee shall vent emissions from EQUI 343 to control equipment meeting the requirements of TREA 55 whenever EQUI 343 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.281.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.281.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 345	L3 Bentonite Blending
5.282.1	The Permittee shall vent emissions from EQUI 345 to control equipment meeting the requirements of TREA 94 whenever EQUI 345 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.282.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.282.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 346	L3 Bentonite Blending
5.283.1	The Permittee shall vent emissions from EQUI 346 to control equipment meeting the requirements of TREA 94 whenever EQUI 346 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.283.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.283.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]

Requirement number	Requirement and citation
EQUI 347	L3 Grate Feed
5.284.1	The Permittee shall vent emissions from EQUI 347 to control equipment meeting the requirements of TREA 172 whenever EQUI 347 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.284.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.284.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 348	L3 Grate Discharge
5.285.1	The Permittee shall vent emissions from EQUI 348 to control equipment meeting the requirements of TREA 173 whenever EQUI 348 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.285.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.285.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 350	L3 Cooler Vent Stack
5.286.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.286.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
5.286.3	Visible Emissions: The Permittee shall check the Line 3 Pellet Cooler Stack (STRU 121) for any visible emissions once each day of operation during daylight hours, except during inclement weather. [Minn. R. 7007.0800, subp. 2(A)]
5.286.4	Recordkeeping of Visible Emissions: The Permittee shall record the time and date of each visible emission inspection, whether or not any visible emissions were observed and whether or not inclement weather was present. [Minn. R. 7007.0800, subps. 4-5]
5.286.5	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the Pellet Cooler or any of its components are found during the inspection to need repair Corrective actions shall eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M plan. The Permittee shall keep a record of the type and date of any corrective action taken. [Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subps. 4-5]
EQUI 351	L3 Feeder 041/046 Belts
5.287.1	The Permittee shall vent emissions from EQUI 351 to control equipment meeting the requirements of TREA 175 whenever EQUI 351 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.287.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.287.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]

5.300.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 365	L4 Bentonite Blending
5.301.1	The Permittee shall vent emissions from EQUI 365 to control equipment meeting the requirements of TREA 102 whenever EQUI 365 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.301.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.301.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 366	L4 Bentonite Blending
5.302.1	The Permittee shall vent emissions from EQUI 366 to control equipment meeting the requirements of TREA 102 whenever EQUI 366 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.302.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.302.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 367	L4 Bentonite Blending
5.303.1	The Permittee shall vent emissions from EQUI 367 to control equipment meeting the requirements of TREA 102 whenever EQUI 367 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.303.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.303.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 368	L4 Grate Discharge
5.304.1	The Permittee shall vent emissions from EQUI 368 to control equipment meeting the requirements of TREA 104 whenever EQUI 368 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.304.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.304.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 370	L4 Pellet Cooler Vent Stack
5.305.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]

Requirement number	Requirement and citation
5.305.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
5.305.3	Visible Emissions: The Permittee shall check the Line 4 Pellet Cooler Stack (STRU 129) for any visible emissions once each day of operation during daylight hours, except during inclement weather. [Minn. R. 7007.0800, subp. 2(A)]
5.305.4	Recordkeeping of Visible Emissions: The Permittee shall record the time and date of each visible emission inspection, whether or not any visible emissions were observed and whether or not inclement weather was present. [Minn. R. 7007.0800, subps. 4-5]
5.305.5	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the Pellet Cooler or any of its components are found during the inspection to need repair Corrective actions shall eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M plan. The Permittee shall keep a record of the type and date of any corrective action taken. [Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subps. 4-5]
EQUI 371	L4 Cooler Discharge / Fines Conveyor
5.306.1	The Permittee shall vent emissions from EQUI 371 to control equipment meeting the requirements of TREA 178 whenever EQUI 371 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.306.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.306.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 372	L4 Conveyor Transfer 041/046 to 042 Belts
5.307.1	The Permittee shall vent emissions from EQUI 372 to control equipment meeting the requirements of TREA 108 whenever EQUI 372 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.307.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.307.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 373	Electric Shop Curing Oven (new)
5.308.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.308.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.308.3	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.308.4	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
EQUI 374	Step II Coarse Crusher Pan Feeders
5.309.1	The Permittee shall vent emissions from EQUI 374 to control equipment meeting the requirements of TREA 232 whenever EQUI 374 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.309.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.309.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 375	Step III Coarse Crusher Pan Feeders
5.310.1	The Permittee shall vent emissions from EQUI 375 to control equipment meeting the requirements of TREA 120 whenever EQUI 375 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.310.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.310.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 376	Zinc Melt Furnace
5.311.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.311.2	Sulfur Dioxide <= 2.0 pounds per million Btu heat input when burning liquid fossil fuels. The potential to emit from the unit is 0.51 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.0610, subp. 2]
5.311.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.311.4	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.311.5	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
EQUI 377	Conveyor Transfer 005-006
5.312.1	The Permittee shall vent emissions from EQUI 377 to control equipment meeting the requirements of TREA122 whenever EQUI 377 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.312.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.312.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 378	Conveyor Transfer 004-005
5.313.1	The Permittee shall vent emissions from EQUI 378 to control equipment meeting the requirements of TREA 210 whenever EQUI 378 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.313.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.313.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 379	Conveyor Transfer 004-005
5.314.1	The Permittee shall vent emissions from EQUI 379 to control equipment meeting the requirements of TREA 210 whenever EQUI 379 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.314.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.314.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further

Requirement number	Requirement and citation
	reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 380	Conveyor Transfer 004-005
5.315.1	The Permittee shall vent emissions from EQUI 380 to control equipment meeting the requirements of TREA 210 whenever EQUI 380 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.315.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.315.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 381	Conveyor Transfer 008 to 009
5.316.1	The Permittee shall vent emissions from EQUI 381 to control equipment meeting the requirements of TREA 221 whenever EQUI 381 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.316.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.316.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 382	Secondary Crusher L3
5.317.1	The Permittee shall vent emissions from EQUI 382 to control equipment meeting the requirements of TREA 227 whenever EQUI 382 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.317.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.317.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 383	Conveyor Transfer 005 to 006
5.318.1	The Permittee shall vent emissions from EQUI 383 to control equipment meeting the requirements of TREA 213 whenever EQUI 383 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.318.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.318.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 384	Conveyor Transfer 005 to 006
5.319.1	The Permittee shall vent emissions from EQUI 384 to control equipment meeting the requirements of TREA 213 whenever EQUI 384 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.319.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.319.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 385	Conveyor Transfer 003 to 004
5.320.1	The Permittee shall vent emissions from EQUI 385 to control equipment meeting the requirements of TREA 222 whenever EQUI 385 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

EQUI 393	Conveyor Transfer 009-020
5.327.1	The Permittee shall vent emissions from EQUI 393 to control equipment meeting the requirements of TREA 229 whenever EQUI 393 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.327.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.327.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 394	Conveyor Transfer 009-020
5.328.1	The Permittee shall vent emissions from EQUI 394 to control equipment meeting the requirements of TREA 229 whenever EQUI 394 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.328.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.328.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 395	Conveyor Transfer 009-020
5.329.1	The Permittee shall vent emissions from EQUI 395 to control equipment meeting the requirements of TREA 86 whenever EQUI 395 operates. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.329.2	Opacity <= 20 percent opacity. [Minn. R. 7011.0715, subp. 1(B)]
5.329.3	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0715, subp. 1(A)]
EQUI 671	Diesel Generator
5.330.1	Opacity <= 20 percent opacity once operating temperatures have been attained. [Minn. R. 7011.2300, subp. 1]
5.330.2	Sulfur Dioxide <= 0.0015 pounds per million Btu heat input. The potential to emit from the unit is 0.0015 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.2300, subp. 2(B)]
5.330.3	Fuel type: No. 2 fuel oil/diesel fuel meeting the requirements of 40 CFR Section 1090.305 only. [Minn. R. 7005.0100, subp. 35a]
5.330.4	Hours of Operation: The Permittee shall maintain documentation on site that the unit is an emergency generator by design that qualifies under the U.S. EPA memorandum entitled "Calculating Potential to Emit (PTE) for Emergency Generators" dated September 6, 1995, that allows calculation of potential emissions based on 500 operating hours per year. [Minn. R. 7007.0800, subps. 4-5]
5.330.5	The Permittee shall keep records of fuel type and usage on a monthly basis. [Minn. R. 7007.0800, subp. 5]
5.330.6	Fuel Supplier Certification: The Permittee shall obtain and maintain a fuel supplier certification for each shipment of diesel fuel oil, certifying that the sulfur content does not exceed 0.0015 percent by

	weight. [Minn. R. 7007.0800, subps. 4-5]
5.330.7	At the time of permit issuance, EQUI 671 is considered a new affected source under 40 CFR pt. 63, subp. ZZZZ as defined at 40 CFR 63.6590(a)(2)(i). However, this unit meets the criteria in 40 CFR 63.6590(b)(1)(i) so no requirements of 40 CFR pt. 63, subps. A and ZZZZ, except the initial notification requirements of 40 CFR 63.6645(f), apply. [40 CFR 63.6590(a)(2)(i) and (b)(1)(i), Minn. R. 7011.8150]
5.330.8	The Permittee must limit emissions of NMHC+NOx <= 6.4 grams per kilowatt-hour as described in 40 CFR pt. 1039, Appendix I. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.9	The Permittee must limit emissions of Particulate Matter <= 0.20 grams per kilowatt-hour as described in 40 CFR pt. 1039, Appendix I. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.10	The Permittee must limit emissions of Carbon Monoxide <= 3.5 grams per kilowatt-hour as described in 40 CFR pt. 1039, Appendix I. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.11	The Permittee must limit emissions of Opacity <= 20 percent opacity during the acceleration mode. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.12	The Permittee must limit emissions of Opacity <= 15 percent opacity during the lugging mode. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.13	The Permittee must limit emissions of Opacity <= 50 percent opacity during the peaks in either the acceleration or lugging modes. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.330.14	The Permittee must limit Sulfur Content of Fuel <= 15.0 parts per million and either a minimum cetane index of 40 or a maximum aromatic content of 35 percent by volume, as required by 40 CFR 1090.305. [40 CFR 60.4207(b), Minn. R. 7011.2305]
5.330.15	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. IIII as follows: 40 CFR 60.4200(a)(2)(i); 40 CFR 60.4202(a)(2); 40 CFR 60.4205(b); 40 CFR 60.4206; 40 CFR 60.4207(b); 40 CFR 60.4208(a); 40 CFR 60.4209(a); 40 CFR 60.4211(a); 40 CFR 60.4211(c); 40 CFR 60.4211(f)(1); 40 CFR 60.4211(f)(2)(i); 40 CFR 60.4211(f)(3); 40 CFR 60.4214(b); 40 CFR 60.4214(d); 40 CFR 60.4214(g)-(j); 40 CFR 60.4218; 40 CFR 60.4219; and 40 CFR pt. 60, subp. IIII, Table 8. A copy of 40 CFR pt. 60, subp. IIII is included in Appendix H. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. IIII, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.2305]

EQUI 707	Line 3 Waste Gas Cyclone
5.362.1	EQUI 707 is a cyclone used for product recovery from EQUI 146. Therefore, EQUI 707 is considered

Requirement number	Requirement and citation
	inherent process equipment and is not treated as or considered to be control equipment. Any replacement or change or modification of EQUI 707 is a replacement or change or modification of an emission unit for purposes of determining if a permit amendment is required. [Minn. R. 7005.0100, subp. 10b, Minn. R. 7005.1150-1500]
5.362.2	The Permittee shall vent emissions from EQUI 146 to EQUI 707 whenever EQUI 146 operates, and operate and maintain EQUI 707 at all times that any emissions are vented to EQUI 707. The Permittee shall document periods of non-operation of the control equipment EQUI 707 whenever EQUI 146 is operating. [Minn. R. 7007.0800, subp. 2(A) and (B)]
5.362.3	The Permittee shall observe the proper operation of the knife gate valve releasing dust from the cyclone at least once each operating day. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.362.4	The Permittee shall record the date and time of each observation of dust releasing from the cyclone via the knife gate valve. [Minn. R. 7007.0800, subps. 4-5]
5.362.5	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee must inspect the control equipment components. The Permittee must maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.362.6	Corrective Actions: The Permittee must take corrective action as soon as possible if dust fails to release from the cyclone via the knife valve. Corrective actions must return the dust release mechanism to work properly and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the cyclone. The Permittee must keep a record of the type and date of any corrective action taken for each cyclone. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
EQUI 708	Line 4 Waste Gas Cyclone
5.363.1	EQUI 708 is a cyclone used for product recovery from EQUI 279. Therefore, EQUI 708 is considered inherent process equipment and is not treated as or considered to be control equipment. Any replacement or change or modification of EQUI 708 is a replacement or change or modification of an emission unit for purposes of determining if a permit amendment is required. [Minn. R. 7005.0100, subp. 10b, Minn. R. 7005.1150-1500]
5.363.2	The Permittee shall vent emissions from EQUI 279 to EQUI 708 whenever EQUI 279 operates, and operate and maintain EQUI 708 at all times that any emissions are vented to EQUI 708. The Permittee shall document periods of non-operation of the control equipment EQUI 708 whenever EQUI 279 is operating. [Minn. R. 7007.0800, subp. 2(A) and (B)]
5.363.3	The Permittee shall observe the proper operation of the knife gate valve releasing dust from the cyclone at least once each operating day. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.363.4	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee must inspect the control equipment components. The Permittee must maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.363.5	The Permittee shall record the date and time of each observation of dust releasing from the cyclone via the knife gate valve. [Minn. R. 7007.0800, subps. 4-5]
5.363.6	Corrective Actions: The Permittee must take corrective action as soon as possible if dust fails to release from the cyclone via the knife valve. Corrective actions must return the dust release mechanism to work properly and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the cyclone. The Permittee must keep a record of the type and date of any corrective action taken for each cyclone. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

Requirement number	Requirement and citation
EQUI 709	Line 5 Waste Gas Cyclone
5.364.1	EQUI 709 is a cyclone used for product recovery from EQUI 280. Therefore, EQUI 709 is considered inherent process equipment and is not treated as or considered to be control equipment. Any replacement or change or modification of EQUI 709 is a replacement or change or modification of an emission unit for purposes of determining if a permit amendment is required. [Minn. R. 7005.0100, subp. 10b, Minn. R. 7005.1150-1500]
5.364.2	The Permittee shall vent emissions from EQUI 280 to EQUI 709 whenever EQUI 280 operates, and operate and maintain EQUI 709 at all times that any emissions are vented to EQUI 709. The Permittee shall document periods of non-operation of the control equipment EQUI 709 whenever EQUI 280 is operating. [Minn. R. 7007.0800, subp. 2(A) and (B)]
5.364.3	The Permittee shall observe the proper operation of the knife gate valve releasing dust from the cyclone at least once each operating day. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.364.4	The Permittee shall record the date and time of each observation of dust releasing from the cyclone via the knife gate valve. [Minn. R. 7007.0800, subps. 4-5]
5.364.5	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee must inspect the control equipment components. The Permittee must maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.364.6	Corrective Actions: The Permittee must take corrective action as soon as possible if dust fails to release from the cyclone via the knife valve. Corrective actions must return the dust release mechanism to work properly and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the cyclone. The Permittee must keep a record of the type and date of any corrective action taken for each cyclone. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
EQUI 710	Line 6 Waste Gas Cyclone
5.365.1	EQUI 710 is a cyclone used for product recovery from EQUI 3. Therefore, EQUI 710 is considered inherent process equipment and is not treated as or considered to be control equipment. Any replacement or change or modification of EQUI 710 is a replacement or change or modification of an emission unit for purposes of determining if a permit amendment is required. [Minn. R. 7005.0100, subp. 10b, Minn. R. 7005.1150-1500]
5.365.2	The Permittee shall vent emissions from EQUI 3 to EQUI 710 whenever EQUI 3 operates, and operate and maintain EQUI 710 at all times that any emissions are vented to EQUI 710. The Permittee shall document periods of non-operation of the control equipment EQUI 710 whenever EQUI 3 is operating. [Minn. R. 7007.0800, subp. 2(A) and (B)]
5.365.3	The Permittee shall observe the proper operation of the knife gate valve releasing dust from the cyclone at least once each operating day. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.365.4	The Permittee shall record the date and time of each observation of dust releasing from the cyclone via the knife gate valve. [Minn. R. 7007.0800, subps. 4-5]
5.365.5	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee must inspect the control equipment components. The Permittee must maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.365.6	Corrective Actions: The Permittee must take corrective action as soon as possible if dust fails to release from the cyclone via the knife valve. Corrective actions must return the dust release mechanism to work properly and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the cyclone. The Permittee must

Requirement number	Requirement and citation
	keep a record of the type and date of any corrective action taken for each cyclone. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
EQUI 711	Line 7 Waste Gas Cyclone
5.366.1	EQUI 711 is a cyclone used for product recovery from EQUI 179. Therefore, EQUI 711 is considered inherent process equipment and is not treated as or considered to be control equipment. Any replacement or change or modification of EQUI 711 is a replacement or change or modification of an emission unit for purposes of determining if a permit amendment is required. [Minn. R. 7005.0100, subp. 10b, Minn. R. 7005.1150-1500]
5.366.2	The Permittee shall vent emissions from EQUI 179 to EQUI 711 whenever EQUI 179 operates, and operate and maintain EQUI 711 at all times that any emissions are vented to EQUI 711. The Permittee shall document periods of non-operation of the control equipment EQUI 711 whenever EQUI 179 is operating. [Minn. R. 7007.0800, subp. 2(A) and (B)]
5.366.3	The Permittee shall observe the proper operation of the knife gate valve releasing dust from the cyclone at least once each operating day. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.366.4	The Permittee shall record the date and time of each observation of dust releasing from the cyclone via the knife gate valve. [Minn. R. 7007.0800, subps. 4-5]
5.366.5	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee must inspect the control equipment components. The Permittee must maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.366.6	Corrective Actions: The Permittee must take corrective action as soon as possible if dust fails to release from the cyclone via the knife valve. Corrective actions must return the dust release mechanism to work properly and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the cyclone. The Permittee must keep a record of the type and date of any corrective action taken for each cyclone. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
EQUI 712	Burnout Oven
5.367.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.367.2	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.367.3	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.367.4	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
FUGI 1	Group 13 screened pellets stock pile
5.368.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.368.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 1 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.368.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
FUGI 3	Coarse tailings stock pile
5.369.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
FUGI 4	Ballast fines rock stock pile - east pit
5.370.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.370.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 4 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.370.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 5	Ballast product rock stock pile - western
5.371.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.371.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 5 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.371.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 6	Surface overburden stock pile
5.372.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.372.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 6 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.372.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 8	Unpaved road for heavy-duty vehicles
5.373.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.373.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 8 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]

Requirement number	Requirement and citation
5.373.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
5.373.4	The Permittee must control emissions from FUGI 8 using the water sprays TREA 268 according to control methods for water application to roads outlined in the fugitive dust control plan. The Permittee must apply water at a rate and frequency to maintain adequate moisture throughout the process and to eliminate visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
FUGI 9	Crude Ore Stock Pile
5.374.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.374.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 9 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.374.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 10	Group 13 screened fines stock pile
5.375.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.375.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 10 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.375.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 11	Ballast feed rock stock pile - east pit
5.376.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
FUGI 12	Waste Rock Stock Pile
5.377.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
FUGI 14	Step I/II crude ore stock pile
5.378.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.378.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 14 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]

Requirement number	Requirement and citation
5.378.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 15	Step II/III concentrate stock pile
5.379.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.379.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 15 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.379.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 16	Tailings Basin
5.380.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.380.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 16 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.380.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 17	Step I/II pellet main stock pile #45
5.381.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.381.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 17 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.381.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 18	Blasting & material handling
5.382.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent

Requirement number	Requirement and citation
	opacity. [Minn. R. 7011.0105]
FUGI 19	Step I/II Crude Ore Stockpile Temp 72
5.383.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.383.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 19 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.383.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 20	Unpaved road for secondary vehicles
5.384.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.384.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 20 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.384.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
5.384.4	The Permittee must control emissions from FUGI 20 using the water sprays TREA 268 according to control methods for water application to roads outlined in the fugitive dust control plan. The Permittee must apply water at a rate and frequency to maintain adequate moisture throughout the process and to eliminate visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
FUGI 21	Step III Crude Ore Stockpile Temp 74
5.385.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.385.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 21 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.385.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 22	Ballast product rock stock pile - east pit
5.386.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.386.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 22 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate

Requirement number	Requirement and citation
	corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.386.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 23	Step I/II pellet main stock pile #44
5.387.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.387.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 23 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.387.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 24	Group 13 feed stock pile
5.388.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
FUGI 25	Ballast fines rock stock pile - western
5.389.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.389.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 25 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.389.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 26	Unpaved road for light-duty vehicles
5.390.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
5.390.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 26 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.390.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
FUGI 27	Scrap rod stock pile
5.391.1	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 33 percent opacity. [Minn. R. 7011.0105]
FUGI 28	Step III pellet main stock pile
5.392.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
5.392.2	Daily Visible Emissions Check: On each day of operation, the Permittee must check visible emissions at FUGI 28 as described in the fugitive dust control plan in Appendix B of the permit. If the Permittee observes visible emissions, the Permittee must investigate the condition and conduct appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.392.3	Visible Emissions Recordkeeping: The Permittee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subps. 4-5]
FUGI 29	Ballast feed rock stock pile - western
5.393.1	Opacity <= 20 percent opacity. [Minn. R. 7011.0110]
FUGI 36	Contractor Activities
5.394.1	For each activity contracted by the Permittee that emits or has the potential to emit any air contaminant or pollution, the Permittee must retain the following records: 1. Contractor name; 2. The dates the contractor operated on site; 3. Daily hours of operation; 4. A description of the activities contracted by the Permittee, including types and amounts of materials handled and the end use of the material; 5. Location(s) where the activities occur; 6. Copies of any contracts for service for the activity; 7. A determination of whether each activity is part of the single stationary source, per the major source definition in 40 CFR 70.2; 8. A list of the equipment operated on-site by the contractor; and 9. Estimated emissions for the contracted activities. [Minn. R. 7007.0800, subps. 4-5]
5.394.2	The Permittee must include all activities contracted by the Permittee in the emission inventory required by Minn. R. 7019.3000-7019.3100. [Minn. R. 7019.3000 - 7019.3100]
5.394.3	The Permittee must require the contractor to provide certified records confirming units brought on-site demonstrate compliance with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9591(a) & (d); 40 CFR 63.9600(a); 40 CFR 63.9610(a); 40 CFR 63.9635; 40 CFR 63.9637; 40 CFR 63.9641(a)-(d), (g), & (h); 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; 40 CFR 63.9650; and 40 CFR pt. 63, subp. RRRRR, Table 4, as specified elsewhere in this permit.

Requirement number	Requirement and citation
	A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7011.8030]
5.394.4	The Permittee must require the contractor to provide certified records confirming units brought on-site demonstrate compliance with all applicable requirements of 40 CFR pt. 60, subp. LL, as follows: 40 CFR 60.380; 40 CFR 60.382(b); 40 CFR 60.385(a); and 40 CFR 60.386(b)(2). A copy of 40 CFR pt. 60, subp. LL is included in Appendix E. [40 CFR pt. 60, subp. LL, Minn. R. 7011.2700]
5.394.5	The Permittee must require the contractor to provide certified records confirming units brought on-site demonstrate compliance with all applicable requirements of 40 CFR pt. 60, subp. OOO, as follows: 40 CFR 60.670; 40 CFR 60.672(b); 40 CFR 60.675(a); 40 CFR 60.675(c)(3); 40 CFR 60.676(f); and 40 CFR pt. 60, subp. OOO, Table 3. A copy of 40 CFR pt. 60, subp. OOO is included in Appendix F. [40 CFR pt. 60, subp. OOO, Minn. R. 7011.3350]
5.394.6	Activities contracted by the Permittee are limited to the following maximum material throughputs, on a 12-month rolling sum basis: 1. 505,000 tons metallic fines 2. 2,585,000 tons metallic non-fines 3. 1,835,000 tons non-metallic material Activities contracted by the Permittee that are authorized by this permit are defined as 1. Metallic fines: concentrate, filter cake, etc. 2. Metallic non-fines: ball mill balls, chips, sinter, pellets, ore, etc. 3. Non-metallic material: fluxstone, rock, gravel, stemming, refractory, soil, road rock, filter rock, BFT, Ballast, etc. [Minn. R. 7007.0800, subp. 2(B)]
5.394.7	Recordkeeping: On each day of operation, the Permittee shall require the contractor to calculate, record, and maintain a record of the material throughput for each activity contracted by the Permittee and provide the information to the Permittee upon request. The Permittee must require the contractor to provide a monthly summary for each activity to the Permittee. This shall be based on written logs and/or electronic monitors. [Minn. R. 7007.0800, subps. 4-5]
5.394.8	By the 20th day of each month, the Permittee must calculate and record the following: 1) The monthly material throughput for each activity contracted by the Permittee for the previous month. 2) The 12-month rolling sum of monthly material throughput for each activity contracted by the Permittee. 3) Whether the 12-month rolling sums exceed the historical maximum material throughput identified elsewhere in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.394.9	Daily Visible Emissions Check: On each day of operation, the Permittee, the contractor, or a designee must check visible emissions for each activity contracted by the Permittee. If visible emissions are observed, the Permittee shall ensure that the contractor investigates the condition and conduct

Requirement number	Requirement and citation
	appropriate corrective actions to eliminate the visible emissions. [Minn. R. 7007.0800, subp. 2(A)]
5.394.10	Visible Emissions Recordkeeping: The Permittee, the contractor, or a designee must record the following: - The date, time, and location of each visible emission check; - If the Permittee observed visible emissions; and - If the Permittee observed visible emissions, the time the corrective actions occurred, what the corrective actions were, and whether the corrective actions eliminated the visible emissions. [Minn. R. 7007.0800, subp. 4-5]
TREA 37	Agglomerator II Line 4 Waste Gas Scrubber
5.395.1	The Permittee shall vent emissions from EQUI 279 to TREA 37 whenever EQUI 279 operates, and operate and maintain TREA 37 at all times that any emissions are vented to TREA 37. The Permittee shall document periods of non-operation of the control equipment TREA 37 whenever EQUI 279 is operating. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.2	If the Permittee replaces TREA 37, the replacement control must meet or exceed the control efficiency requirements of TREA 37 as well as comply with all other requirements of TREA 37. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 97.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(B)]
5.395.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 89.2 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(B)]
5.395.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 81.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(B)]
5.395.6	Pressure Drop ≥ 6.6 inches of water daily average (Pressure Drop Range Limit) as determined during the September 2023 performance test, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.7	Water flow rate ≥ 2322 gallons per minute daily average (Flow Rate Limit) as determined during the September 2023 performance test, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.8	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b);

Requirement number	Requirement and citation
	40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.395.9	The Permittee shall operate and maintain the scrubber in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.395.10	The Permittee shall maintain and operate a pressure drop monitoring device that continuously indicates and records the pressure drop across the scrubber every 15 minutes. The permittee shall maintain and operate a water flow monitoring device that indicates and records the water flow rate of the scrubber every 15 minutes. The recording device shall also calculate the three-hour rolling average pressure drop and water flow rate. [40 CFR 64.3(b)(ii), Minn. R. 7017.0200]
5.395.11	The Permittee shall maintain a continuous hard copy readout or computer disk file of the pressure drop readings and water flow rate readings. Readings outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7017.0200]
5.395.12	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.395.13	If the recorded water flow rate is below the Water Flow Rate Limit, the emissions during that time shall be considered uncontrolled until the water flow rate is above the Water Flow Rate Limit. The period of time for which emissions are considered uncontrolled shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.395.14	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.395.15	Annual Calibration: The Permittee shall calibrate the pressure drop monitor at least once every 12 months and shall maintain a written record of the calibration and any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.395.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions

Requirement number	Requirement and citation
	taken resulting from the inspection. [40 CFR 64.3, Minn. R. 7017.0200]
5.395.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [40 CFR 64.3, Minn. R. 7017.0200]
5.395.18	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the recorded water flow rate is below the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each control device. [40 CFR 64.7(d), Minn. R. 7017.0200]
5.395.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.20	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as

Requirement number	Requirement and citation
	operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Water Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.395.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.395.22	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.395.23	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range or minimum water flow rate, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.395.24	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.395.25	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 38	Line 5 Waste Gas Scrubber
5.396.1	The Permittee shall vent emissions from EQUI 280 to TREA 38 whenever EQUI 280 operates, and operate and maintain TREA 38 at all times that any emissions are vented to TREA 38. The Permittee shall document periods of non-operation of the control equipment TREA 38 whenever TREA 38 is operating. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.2	If the Permittee replaces TREA 38, the replacement control must meet or exceed the control efficiency requirements of TREA 38 as well as comply with all other requirements of TREA 38. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 97.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2]
5.396.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 89.2 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2]
5.396.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 81.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2]
5.396.6	Pressure Drop ≥ 6.5 inches of water daily average (Pressure Drop Range Limit) as determined during the September 2023 performance test, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.7	Water flow rate ≥ 2298 gallons per minute daily average (Flow Rate Limit) as determined during the September 2023 performance test, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.8	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to

Requirement number	Requirement and citation
	Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.396.9	The Permittee shall operate and maintain the scrubber in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.396.10	The Permittee shall maintain and operate a pressure drop monitoring device that continuously indicates and records the pressure drop across the scrubber. The recording device shall also calculate the three-hour rolling average pressure drop. [40 CFR 64.3(b)(ii), Minn. R. 7017.0200]
5.396.11	The Permittee shall maintain a continuous hard copy readout or computer disk file of the pressure drop readings. Readings outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7017.0200]
5.396.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.396.13	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.396.14	If the recorded water flow rate is below the Water Flow Rate Limit, the emissions during that time shall be considered uncontrolled until the water flow rate is above the Water Flow Rate Limit. The period of time for which emissions are considered uncontrolled shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.396.15	Annual Calibration: The Permittee shall calibrate the pressure drop monitor at least once every 12 months and shall maintain a written record of the calibration and any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.396.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [40 CFR 64.3, Minn. R. 7017.0200]
5.396.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [40 CFR 64.3, Minn. R. 7017.0200]
5.396.18	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the recorded water flow rate is below the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each control device. [40 CFR 64.7(d), Minn. R. 7017.0200]

Requirement number	Requirement and citation
5.396.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.20	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.396.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.396.22	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits

Requirement number	Requirement and citation
	and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.396.23	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range or minimum water flow rate, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.396.24	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.396.25	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 48	Step I Secondary Crusher Line 6 Scrubber
5.397.1	The Permittee shall vent emissions from EQUI 339 to TREA 48 whenever EQUI 339 operates, and operate and maintain TREA 48 at all times that any emissions are vented to TREA 48. The Permittee shall document periods of non-operation of the control equipment whenever EQUI 339 is operating. Note: TREA 238 will replace TREA 48. Prior to the startup and operation of TREA 238, the Permittee shall follow the requirements for TREA 48. After the startup and operation of TREA 238, TREA 48 shall be shut down, and the Permittee shall follow requirements for TREA 238 instead of TREA 48. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.397.2	If the Permittee replaces TREA 48, the replacement control must meet or exceed the control efficiency requirements of TREA 48 as well as comply with all other requirements of TREA 48. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.397.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.397.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.397.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) and (B)]
5.397.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.397.7	Pressure Drop $\geq$ 4.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.397.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.397.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.397.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.397.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily

Requirement number	Requirement and citation
	average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.397.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.397.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.397.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.397.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.397.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.397.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.397.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the

Requirement number	Requirement and citation
	Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.397.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.397.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.397.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 49	Step I Secondary Crusher Line 7 Scrubber
5.398.1	The Permittee shall vent emissions from EQUI 390 to TREA 49 whenever EQUI 390 operates, and operate and maintain TREA 49 at all times that any emissions are vented to TREA 49. The Permittee shall document periods of non-operation of the control equipment TREA 49 whenever EQUI 390 is operating. Note: TREA 238 will replace TREA 49. Prior to the startup and operation of TREA 238, the Permittee shall follow the requirements for TREA 49. After the startup and operation of TREA 238, TREA 49 shall be shut down, and the Permittee shall follow requirements for TREA 238 instead of TREA 49. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.398.2	If the Permittee replaces TREA 49, the replacement control must meet or exceed the control efficiency requirements of TREA 49 as well as comply with all other requirements of TREA 49. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.398.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.398.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.398.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.398.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.398.7	Pressure Drop $\geq$ 4.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.398.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.398.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit,

Requirement number	Requirement and citation
	the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.398.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.398.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.398.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.398.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.398.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.398.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.398.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.398.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.398.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance

Requirement number	Requirement and citation
	testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.398.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.398.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.398.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 50	Step I Secondary Crusher Line 8 Scrubber
5.399.1	The Permittee shall vent emissions from EQUI 340 to TREA 50 whenever EQUI 340 operates, and

Requirement number	Requirement and citation
	operate and maintain TREA 50 at all times that any emissions are vented to TREA 50. The Permittee shall document periods of non-operation of the control equipment TREA 50 whenever EQUI 340 is operating. Note: TREA 240 will replace TREA 50. Prior to the startup and operation of TREA 240, the Permittee shall follow the requirements for TREA 50. After the startup and operation of TREA 240, TREA 50 shall be shut down, and the Permittee shall follow requirements for TREA 240 instead of TREA 50. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.399.2	If the Permittee replaces TREA 50, the replacement control must meet or exceed the control efficiency requirements of TREA 50 as well as comply with all other requirements of TREA 50. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.399.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.399.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.399.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.399.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application

Requirement number	Requirement and citation
	for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.399.7	Pressure Drop $\geq$ 4.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.399.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. The Permittee shall record the water flow rate at least once every 24 hours. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.399.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.399.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.399.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.399.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.399.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subs. 4-5]

Requirement number	Requirement and citation
5.399.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.399.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.399.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.399.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.399.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.399.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or

Requirement number	Requirement and citation
	- if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.399.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.399.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 51	Step I Secondary Crusher Line 9 Scrubber
5.400.1	The Permittee shall vent emissions from EQUI 341 to TREA 51 whenever EQUI 341 operates, and operate and maintain TREA 51 at all times that any emissions are vented to TREA 51. The Permittee shall document periods of non-operation of the control equipment TREA 51 whenever EQUI 341 is operating. Note: TREA 241 will replace TREA 51. Prior to the startup and operation of TREA 241, the Permittee shall follow the requirements for TREA 51. After the startup and operation of TREA 241, TREA 51 shall be shut down, and the Permittee shall follow requirements for TREA 241 instead of TREA 51. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.400.2	If the Permittee replaces TREA 51, the replacement control must meet or exceed the control efficiency requirements of TREA 51 as well as comply with all other requirements of TREA 51. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.400.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.400.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.400.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.400.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b);

Requirement number	Requirement and citation
	40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.400.7	Pressure Drop $\geq$ 4.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.400.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.400.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.400.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.400.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.400.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate;

Requirement number	Requirement and citation
	- the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.400.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.400.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.400.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.400.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.400.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.400.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.400.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.400.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.400.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 52	Step I Secondary Crusher Line 10 Scrubber
5.401.1	The Permittee shall vent emissions from EQUI 5 to TREA 52 whenever EQUI 5 operates, and operate and maintain TREA 52 at all times that any emissions are vented to TREA 52. The Permittee shall document periods of non-operation of the control equipment TREA 52 whenever EQUI 5 is operating. Note: TREA 242 will replace TREA 52. Prior to the startup and operation of TREA 242, the Permittee shall follow the requirements for TREA 52. After the startup and operation of TREA 242, TREA 52 shall be shut down, and the Permittee shall follow requirements for TREA 242 instead of TREA 52. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.401.2	If the Permittee replaces TREA 52, the replacement control must meet or exceed the control efficiency requirements of TREA 52 as well as comply with all other requirements of TREA 52. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.401.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.401.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.401.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.401.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.401.7	Pressure Drop $\geq$ 4.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.401.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.401.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.401.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the

Requirement number	Requirement and citation
	required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.401.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.401.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.401.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.401.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.401.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.401.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.401.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.401.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the

Requirement number	Requirement and citation
	particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.401.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.401.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.401.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 53	Step I Conveyor Transfer 008 to 009 Scrubber
5.402.1	The Permittee shall vent emissions from EQUI 6, EQUI 7, and EQUI 342 to TREA 53 whenever EQUI 6, EQUI 7, and EQUI 342 operates, and operate and maintain TREA 53 at all times that any emissions are vented to TREA 53. The Permittee shall document periods of non-operation of the control equipment TREA 53 whenever EQUI 6, EQUI 7, and EQUI 342 are operating. Note: TREA 237 will replace TREA 53. Prior to the startup and operation of TREA 237, the Permittee shall follow the requirements for TREA 53. After the startup and operation of TREA 237, TREA 53 shall be shut down, and the Permittee shall follow requirements for TREA 237 instead of TREA 53. [Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.402.2	If the Permittee replaces TREA 53, the replacement control must meet or exceed the control efficiency requirements of TREA 53 as well as comply with all other requirements of TREA 53. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.402.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.402.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.402.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.402.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. 5.402.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.402.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.402.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.402.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.402.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.402.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.402.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.402.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every

Requirement number	Requirement and citation
	12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.402.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.402.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.402.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.402.20	Protocol for Resetting the Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.402.21	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.402.22	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 54	Secondary Storage Bin 070-02 Scrubber
5.403.1	The Permittee shall vent emissions from EQUI 392 to TREA 54 whenever EQUI 392 operates, and operate and maintain TREA 54 at all times that any emissions are vented to TREA 54. The Permittee shall document periods of non-operation of the control equipment TREA 54 whenever EQUI 392 is operating. Note: TREA 234 will replace TREA 54. Prior to the startup and operation of TREA 234, the Permittee shall follow the requirements for TREA 54. After the startup and operation of TREA 234, TREA 54 shall be shut down, and the Permittee shall follow requirements for TREA 234 instead of TREA 54. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.403.2	If the Permittee replaces TREA 54, the replacement control must meet or exceed the control efficiency requirements of TREA 54 as well as comply with all other requirements of TREA 54. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.403.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.403.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.403.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency

Requirement number	Requirement and citation
	for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.403.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.403.7	Pressure Drop $\geq$ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.403.8	Water flow rate $\geq$ 14.5 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.403.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.403.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.403.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous

Requirement number	Requirement and citation
	written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.403.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.403.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.403.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.403.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.403.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.403.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.403.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or

Requirement number	Requirement and citation
	- if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.403.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.403.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.403.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 57	Step III Secondary Crusher Line 11 Scrubber
5.404.1	The Permittee shall vent emissions from EQUI 9 to TREA 57 whenever EQUI 9 operates, and operate and maintain TREA 57 at all times that any emissions are vented to TREA 57. The Permittee shall document periods of non-operation of the control equipment TREA 57 whenever EQUI 9 is operating. Note: TREA 245 will replace TREA 57. Prior to the startup and operation of TREA 245, the Permittee shall follow the requirements for TREA 57. After the startup and operation of TREA 245, TREA 57 shall be shut down, and the Permittee shall follow requirements for TREA 245 instead of TREA 57. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.404.2	If the Permittee replaces TREA 57, the replacement control must meet or exceed the control efficiency requirements of TREA 57 as well as comply with all other requirements of TREA 57. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.404.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.404.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.404.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.404.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. 5.404.7	Pressure Drop ≥ 4.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.404.8	Water flow rate ≥ 24.5 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.404.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again

Requirement number	Requirement and citation
	above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.404.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.404.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.404.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.404.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.404.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.404.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.404.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.404.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.404.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established

Requirement number	Requirement and citation
	Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.404.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.404.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.404.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 58	Step III Secondary Crusher Line 12 Scrubber
5.405.1	The Permittee shall vent emissions from EQUI 285 to TREA 58 whenever EQUI 285 operates, and operate and maintain TREA 58 at all times that any emissions are vented to TREA 58. The Permittee

Requirement number	Requirement and citation
	shall document periods of non-operation of the control equipment TREA 58 whenever EQUI 285 is operating. Note: TREA 246 will replace TREA 58. Prior to the startup and operation of TREA 246, the Permittee shall follow the requirements for TREA 58. After the startup and operation of TREA 246, TREA 58 shall be shut down, and the Permittee shall follow requirements for TREA 246 instead of TREA 58. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.405.2	If the Permittee replaces TREA 58, the replacement control must meet or exceed the control efficiency requirements of TREA 58 as well as comply with all other requirements of TREA 58. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.405.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.405.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.405.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.405.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to

Requirement number	Requirement and citation
	Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.405.7	Pressure Drop $\geq$ 4.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f) as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.405.8	Water flow rate $\geq$ 24.5 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.405.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.405.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.405.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.405.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.405.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.405.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.405.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.405.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.405.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.405.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.405.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended.

5.406.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.406.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.406.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.406.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or

Requirement number	Requirement and citation
	- the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.406.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.406.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.406.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.406.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.406.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.406.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]

5.406.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.406.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.406.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 62	Conveyor Transfer 001-070 Bin Scrubber
5.407.1	The Permittee shall vent emissions from EQUI 11 to TREA 62 whenever EQUI 11 operates, and operate and maintain TREA 62 at all times that any emissions are vented to TREA 62. The Permittee shall document periods of non-operation of the control equipment TREA 62 whenever EQUI 11 is operating. Note: TREA 265 will replace TREA 62. Prior to the startup and operation of TREA 265, the Permittee shall follow the requirements for TREA 62. After the startup and operation of TREA 265, TREA 62 shall be shut down, and the Permittee shall follow requirements for TREA 265 instead of TREA 62. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.407.2	If the Permittee replaces TREA 62, the replacement control must meet or exceed the control efficiency requirements of TREA 62 as well as comply with all other requirements of TREA 62. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.407.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.407.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.407.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.407.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.407.7	Pressure Drop $\geq$ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.407.8	Water flow rate $\geq$ 13.9 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.407.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.407.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the

Requirement number	Requirement and citation
	required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.407.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.407.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.407.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.407.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.407.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.407.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.407.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.407.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the

Requirement number	Requirement and citation
	particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.407.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.407.20	Protocol for Resetting the Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended.

5.408.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.408.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.408.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.408.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.408.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.408.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.408.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.408.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 64	Conveyor Transfer 003 to 004 Scrubber
5.409.1	The Permittee shall vent emissions from EQUI 12 and EQUI 290 to TREA 64 whenever EQUI 12 and EQUI 290 operate, and operate and maintain TREA 64 at all times that any emissions are vented to TREA 64. The Permittee shall document periods of non-operation of the control equipment TREA 64 whenever EQUI 12 and EQUI 290 is operating. Note: TREA 262 will replace TREA 64. Prior to the startup and operation of TREA 262, the Permittee shall follow the requirements for TREA 64. After the startup and operation of TREA 262, TREA 64 shall be shut down, and the Permittee shall follow requirements for TREA 262 instead of TREA 64. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.409.2	If the Permittee replaces TREA 64, the replacement control must meet or exceed the control efficiency requirements of TREA 64 as well as comply with all other requirements of TREA 64. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.409.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.409.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.409.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) and (B)]
5.409.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.409.7	Pressure Drop $\geq$ 3.3 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.409.8	Water flow rate $\geq$ 14.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.409.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.409.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.409.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily

Requirement number	Requirement and citation
	average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.409.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.409.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.409.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.409.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.409.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.409.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.409.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the

Requirement number	Requirement and citation
	Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.409.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.409.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.409.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 65	Step III Tertiary Storage 006-080 Bins Scrubber
5.410.1	The Permittee shall vent emissions from EQUI 13, EQUI 14, EQUI 15, EQUI 291, EQUI 292, EQUI 293, and EQUI 296 to TREA 65 whenever EQUI 13, EQUI 14, EQUI 15, EQUI 291, EQUI 292, EQUI 293, or EQUI 296 operates, and operate and maintain TREA 65 at all times that any emissions are vented to TREA 65. The Permittee shall document periods of non-operation of the control equipment TREA 65 whenever EQUI 13, EQUI 14, EQUI 15, EQUI 291, EQUI 292, EQUI 293, or EQUI 296 is operating. Note: TREA 269 will replace TREA 65. Prior to the startup and operation of TREA 269, the Permittee shall follow the requirements for TREA 65. After the startup and operation of TREA 269, TREA 65 shall be shut down, and the Permittee shall follow requirements for TREA 269. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.410.2	If the Permittee replaces TREA 65, the replacement control must meet or exceed the control efficiency requirements of TREA 65 as well as comply with all other requirements of TREA 65. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.410.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.410.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.410.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.410.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.410.7	Pressure Drop $\geq$ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.410.8	Water flow rate $\geq$ 14.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.410.9	The Permittee shall calculate and record the daily average water flow rate at least once each

Requirement number	Requirement and citation
	operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.410.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.410.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.410.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.410.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.410.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.410.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.410.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.410.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]

Requirement number	Requirement and citation
5.410.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.410.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.410.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.410.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 66	Step III Tertiary Crusher Line 18 Scrubber

Requirement number	Requirement and citation
5.411.1	The Permittee shall vent emissions from EQUI 297 to TREA 66 whenever TREA 66 operates, and operate and maintain TREA 66 at all times that any emissions are vented to TREA 66. The Permittee shall document periods of non-operation of the control equipment TREA 66 whenever EQUI 297 is operating. Note: TREA 250 will replace TREA 66. Prior to the startup and operation of TREA 250, the Permittee shall follow the requirements for TREA 66. After the startup and operation of TREA 250, TREA 66 shall be shut down, and the Permittee shall follow requirements for TREA 250 instead of TREA 66. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.411.2	If the Permittee replaces TREA 66, the replacement control must meet or exceed the control efficiency requirements of TREA 66 as well as comply with all other requirements of TREA 66. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.411.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.411.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.411.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.411.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if

Requirement number	Requirement and citation
	there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.411.7	Pressure Drop $\geq$ 4.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.411.8	Water flow rate $\geq$ 21.8 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.411.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.411.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.411.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.411.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.411.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subs. 4-5]
5.411.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record

Requirement number	Requirement and citation
	of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.411.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.411.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.411.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.411.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.411.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs.

5.412.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.412.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.412.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.412.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.412.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.412.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.412.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.412.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.412.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.412.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.412.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow

	Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.412.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.412.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 68	Step III Tertiary Crusher Line 20 Scrubber
5.413.1	The Permittee shall vent emissions from EQUI 299 to TREA 68 whenever EQUI 299 operates, and operate and maintain TREA 68 at all times that any emissions are vented to TREA 68. The Permittee shall document periods of non-operation of the control equipment TREA 68 whenever EQUI 299 is operating. Note: TREA 253 will replace TREA 68. Prior to the startup and operation of TREA 253, the Permittee shall follow the requirements for TREA 68. After the startup and operation of TREA 253, TREA 68 shall be shut down, and the Permittee shall follow requirements for TREA 253 instead of TREA 68. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.413.2	If the Permittee replaces TREA 68, the replacement control must meet or exceed the control efficiency requirements of TREA 68 as well as comply with all other requirements of TREA 68. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.413.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.413.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.413.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.413.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.413.7	Pressure Drop $\geq$ 4.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.413.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.413.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.413.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.413.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.413.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.413.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.413.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.413.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.413.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.413.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.413.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run.

Requirement number	Requirement and citation
	- if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.413.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.413.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.413.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 69	Step III Tertiary Crusher Line 21 Scrubber
5.414.1	The Permittee shall vent emissions from EQUI 300 to TREA 69 whenever EQUI 300 operates, and operate and maintain TREA 69 at all times that any emissions are vented to TREA 69. The Permittee shall document periods of non-operation of the control equipment TREA 69 whenever EQUI 300 is operating. Note: TREA 251 will replace TREA 69. Prior to the startup and operation of TREA 251, the Permittee shall follow the requirements for TREA 69. After the startup and operation of TREA 251, TREA 69 shall be shut down, and the Permittee shall follow requirements for TREA 251 instead of TREA 69. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.414.2	If the Permittee replaces TREA 69, the replacement control must meet or exceed the control efficiency requirements of TREA 69 as well as comply with all other requirements of TREA 69. Prior to

Requirement number	Requirement and citation
	making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.414.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.414.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.414.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.414.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.414.7	Pressure Drop ≥ 4.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.414.8	Water flow rate ≥ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R.

Requirement number	Requirement and citation
	7011.8030, Minn. R. 7017.2025]
5.414.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.414.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.414.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.414.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.414.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.414.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.414.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.414.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.414.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The

Requirement number	Requirement and citation
	Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.414.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.414.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.414.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.414.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required

Requirement number	Requirement and citation
	by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 70	Step III Tertiary Crusher Line 22 Scrubber
5.415.1	The Permittee shall vent emissions from EQUI 301 to TREA 70 whenever EQUI 301 operates, and operate and maintain TREA 70 at all times that any emissions are vented to TREA 70. The Permittee shall document periods of non-operation of the control equipment TREA 70 whenever EQUI 301 is operating. Note: TREA 254 will replace TREA 70. Prior to the startup and operation of TREA 254, the Permittee shall follow the requirements for TREA 70. After the startup and operation of TREA 254, TREA 70 shall be shut down, and the Permittee shall follow requirements for TREA 254 instead of TREA 70. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.415.2	If the Permittee replaces TREA 70, the replacement control must meet or exceed the control efficiency requirements of TREA 70 as well as comply with all other requirements of TREA 70. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.415.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.415.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.415.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.415.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J.

Requirement number	Requirement and citation
	If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.415.7	Pressure Drop $\geq$ 4.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.415.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.415.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.415.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.415.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.415.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.415.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subs. 4-5]
5.415.14	Semiannual inspections: At least once semiannually, or more frequently if required by the

Requirement number	Requirement and citation
	manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.415.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.415.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.415.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.415.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.415.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the

Requirement number	Requirement and citation
	Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.415.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.415.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 71	Step III Tertiary Crusher Line 23 Scrubber
5.416.1	The Permittee shall vent emissions from EQUI 674 to TREA 71 whenever EQUI 674 operates, and operate and maintain TREA 71 at all times that any emissions are vented to TREA 71. The Permittee shall document periods of non-operation of the control equipment TREA 71 whenever EQUI 674 is operating. Note: TREA 255 will replace TREA 71. Prior to the startup and operation of TREA 255, the Permittee shall follow the requirements for TREA 71. After the startup and operation of TREA 255, TREA 71 shall be shut down, and the Permittee shall follow requirements for TREA 255 instead of TREA 71. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.2	If the Permittee replaces TREA 71, the replacement control must meet or exceed the control efficiency requirements of TREA 71 as well as comply with all other requirements of TREA 71. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3);

Requirement number	Requirement and citation
	40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.416.7	Pressure Drop $\geq$ 4.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.8	Water flow rate $\geq$ 21.3 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.416.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.416.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or

Requirement number	Requirement and citation
	- the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.416.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.416.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.416.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.416.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.416.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.416.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]

Requirement number	Requirement and citation
5.416.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.416.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.416.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 72	Step III Tertiary Crusher Line 24 Scrubber
5.417.1	The Permittee shall vent emissions from EQUI 303 to TREA 72 whenever EQUI 303 operates, and operate and maintain TREA 72 at all times that any emissions are vented to TREA 72. The Permittee shall document periods of non-operation of the control equipment TREA 72 whenever EQUI 303 is operating. Note: TREA 257 will replace TREA 72. Prior to the startup and operation of TREA 257, the Permittee shall follow the requirements for TREA 72. After the startup and operation of TREA 257, TREA 72 shall be shut down, and the Permittee shall follow requirements for TREA 257 instead of TREA 72. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.417.2	If the Permittee replaces TREA 72, the replacement control must meet or exceed the control efficiency requirements of TREA 72 as well as comply with all other requirements of TREA 72. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.417.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.417.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.417.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.417.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.417.7	Pressure Drop $\geq$ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.417.8	Water flow rate $\geq$ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.417.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.417.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the

Requirement number	Requirement and citation
	required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.417.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.417.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.417.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.417.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.417.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.417.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.417.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.417.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the

Requirement number	Requirement and citation
	particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.417.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.417.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.417.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 73	Step III Tertiary Crusher Line 25 Scrubber
5.418.1	The Permittee shall vent emissions from EQUI 675 to TREA 73 whenever EQUI 675 operates, and operate and maintain TREA 73 at all times that any emissions are vented to TREA 73. The Permittee shall document periods of non-operation of the control equipment TREA 73 whenever EQUI 675 is operating. Note: TREA 258 will replace TREA 73. Prior to the startup and operation of TREA 258, the Permittee shall follow the requirements for TREA 73. After the startup and operation of TREA 258, TREA 73 shall be shut down, and the Permittee shall follow requirements for TREA 258 instead of TREA 73. [Title I

Requirement number	Requirement and citation
	Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.2	If the Permittee replaces TREA 73, the replacement control must meet or exceed the control efficiency requirements of TREA 73 as well as comply with all other requirements of TREA 73. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.418.7	Pressure Drop ≥ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.418.8	Water flow rate $\geq$ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.418.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.418.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.418.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.418.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.418.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.418.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every

Requirement number	Requirement and citation
	12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.418.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.418.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.418.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.418.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a

Requirement number	Requirement and citation
	permit amendment incorporating the change. [Minn. R. 7017.2025]
5.418.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 74	Step III Tertiary Crusher Line 26 Scrubber
5.419.1	The Permittee shall vent emissions from EQUI 305 to TREA 74 whenever EQUI 305 operates, and operate and maintain TREA 74 at all times that any emissions are vented to TREA 74. The Permittee shall document periods of non-operation of the control equipment TREA 74 whenever EQUI 305 is operating. Note: TREA 259 will replace TREA 74. Prior to the startup and operation of TREA 259, the Permittee shall follow the requirements for TREA 74. After the startup and operation of TREA 259, TREA 74 shall be shut down, and the Permittee shall follow requirements for TREA 259 instead of TREA 74. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.419.2	If the Permittee replaces EQUI 305, the replacement control must meet or exceed the control efficiency requirements of EQUI 305 as well as comply with all other requirements of EQUI 305. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.419.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.419.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.419.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.419.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c);

Requirement number	Requirement and citation
	40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.419.7	Pressure Drop $\geq$ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.419.8	Water flow rate $\geq$ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.419.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.419.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.419.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.419.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.419.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet

Requirement number	Requirement and citation
	scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.419.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.419.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.419.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.419.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.419.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.419.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run.

Requirement number	Requirement and citation
	- if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.419.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.419.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 75	Step III Tertiary Crusher Line 27 Scrubber
5.420.1	The Permittee shall vent emissions from EQUI 306 to TREA 75 whenever EQUI 306 operates, and operate and maintain TREA 75 at all times that any emissions are vented to TREA 75. The Permittee shall document periods of non-operation of the control equipment TREA 75 whenever EQUI 306 is operating. Note: TREA 260 will replace TREA 75. Prior to the startup and operation of TREA 260, the Permittee shall follow the requirements for TREA 75. After the startup and operation of TREA 260, TREA 75 shall be shut down, and the Permittee shall follow requirements for TREA 260 instead of TREA 75. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.420.2	If the Permittee replaces TREA 75, the replacement control must meet or exceed the control efficiency requirements of TREA 75 as well as comply with all other requirements of TREA 75. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.420.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.420.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.420.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.420.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c);

Requirement number	Requirement and citation
	40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.420.7	Pressure Drop $\geq$ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.420.8	Water flow rate $\geq$ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.420.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.420.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.420.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.420.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the

Requirement number	Requirement and citation
	following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.420.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.420.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.420.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.420.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.420.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.420.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range

Requirement number	Requirement and citation
	Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.420.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.420.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.420.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 76	Step III Tertiary Crusher Line 28 Scrubber
5.421.1	The Permittee shall vent emissions from EQUI 673 to TREA 76 whenever EQUI 673 operates, and operate and maintain TREA 76 at all times that any emissions are vented to TREA 76. The Permittee shall document periods of non-operation of the control equipment TREA 76 whenever EQUI 673 is operating. Note: TREA 256 will replace TREA 76. Prior to the startup and operation of TREA 256, the Permittee shall follow the requirements for TREA 76. After the startup and operation of TREA 256, TREA 76 shall be shut down, and the Permittee shall follow requirements for TREA 256 instead of TREA 76. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.2	If the Permittee replaces TREA 76, the replacement control must meet or exceed the control efficiency requirements of TREA 76 as well as comply with all other requirements of TREA 76. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency

Requirement number	Requirement and citation
	for Particulate Matter ≥ 95.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.421.7	Pressure Drop ≥ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.8	Water flow rate ≥ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.10	The Permittee shall record the daily average pressure drop at least once each operating day using the

Requirement number	Requirement and citation
	continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.421.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.421.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.421.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.421.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.421.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.421.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.421.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.421.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.421.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.421.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.421.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 86	Step III Concentrator Tripper Transfer Scrubber
5.422.1	The Permittee shall vent emissions from EQUI 173, EQUI 240, EQUI 241, and EQUI 395 to TREA 86 whenever EQUI 173, EQUI 240, EQUI 241, or EQUI 395 operates, and operate and maintain TREA 86 at all times that any emissions are vented to TREA 86. The Permittee shall document periods of non-operation of the control equipment TREA 86 whenever EQUI 173, EQUI 240, EQUI 241, or EQUI 395 is operating.

Requirement number	Requirement and citation
	Note: TREA 261 will replace TREA 86. Prior to the startup and operation of TREA 261, the Permittee shall follow the requirements for TREA 86. After the startup and operation of TREA 261, TREA 86 shall be shut down, and the Permittee shall follow requirements for TREA 261 instead of TREA 86. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.422.2	If the Permittee replaces TREA 86, the replacement control must meet or exceed the control efficiency requirements of TREA 86 as well as comply with all other requirements of TREA 86. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.422.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.422.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.422.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.422.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.422.7	Pressure Drop ≥ 3.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is

Requirement number	Requirement and citation
	set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.422.8	Water flow rate $\geq$ 21.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.422.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.422.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.422.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.422.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.422.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.422.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.422.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The

Requirement number	Requirement and citation
	monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.422.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.422.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.422.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.422.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.422.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits

Requirement number	Requirement and citation
	and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.422.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 89	S3 Bentonite Storage Baghouse
5.423.1	The Permittee shall vent emissions from EQUI 278 to TREA 89 whenever EQUI 278 operates, and operate and maintain TREA 89 at all times that any emissions are vented to TREA 89. The Permittee shall document periods of non-operation of the control equipment TREA 89 whenever EQUI 278 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.423.2	If the Permittee replaces TREA 89, the replacement control must meet or exceed the control efficiency requirements of TREA 89 as well as comply with all other requirements of TREA 89. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.423.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.423.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.423.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.423.6	Pressure Drop ≥ 0.5 and ≤ 6.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. During inclement weather, the Permittee shall record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.423.7	Visible Emissions: The Permittee shall check the fabric filter stack STRU 113 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.423.8	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.423.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.423.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.423.11	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.423.12	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.423.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.423.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.423.15	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range.

Requirement number	Requirement and citation
	The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.423.16	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.423.17	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 90	Limestone Receiving Baghouse
5.424.1	The Permittee shall vent emissions from EQUI 275 and EQUI 705 to TREA 90 whenever EQUI 275 or EQUI 705 operates, and operate and maintain TREA 90 at all times that any emissions are vented to TREA 90. The Permittee shall document periods of non-operation of the control equipment TREA 90 whenever EQUI 275 or EQUI 705 is operating. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.424.2	If the Permittee replaces TREA 90, the replacement control must meet or exceed the control efficiency requirements of TREA 90 as well as comply with all other requirements of TREA 90. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.424.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.424.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.424.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.424.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of

Requirement number	Requirement and citation
	time for which the pressure drop is considered out of range must be reported as a deviation. [During inclement weather,] The Permittee must record the pressure drop at least once every 24 hours when in operation. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.424.7	Visible Emissions: The Permittee shall check the fabric filter stack STRU 253 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.424.8	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.424.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.424.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.424.11	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.424.12	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.424.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.424.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 94	Line 3 Bentonite Blending Baghouse
5.425.1	The Permittee shall vent emissions from EQUI 143, EQUI 144, EQUI 345, and EQUI 346 to TREA 94 whenever EQUI 143, EQUI 144, EQUI 345, or EQUI 346 operates, and operate and maintain TREA 94 at all times that any emissions are vented to TREA 94. The Permittee shall document periods of non-

Requirement number	Requirement and citation
	operation of the control equipment TREA 94 whenever EQUI 143, EQUI 144, EQUI 345, or EQUI 346 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.2	If the Permittee replaces TREA 94, the replacement control must meet or exceed the control efficiency requirements of TREA 94 as well as comply with all other requirements of TREA 94. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.425.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.425.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.425.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.425.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 4]
5.425.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.425.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.425.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 97	S1 Bentonite Storage Baghouse
5.426.1	The Permittee shall vent emissions from EQUI 151, EQUI 355, and EQUI 356 to TREA 97 whenever EQUI 151, EQUI 355, or EQUI 356 operates, and operate and maintain TREA 97 at all times that any emissions are vented to TREA 97. The Permittee shall document periods of non-operation of the control equipment TREA 97 whenever EQUI 151, EQUI 355, or EQUI 356 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.426.2	If the Permittee replaces TREA 97, the replacement control must meet or exceed the control efficiency requirements of TREA 97 as well as comply with all other requirements of TREA 97. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.426.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.426.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.426.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.426.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R.

	manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 99	Agglomerators I & II Bentonite Unloading Baghouse
5.428.1	The Permittee shall vent emissions from EQUI 359 to TREA 99 whenever EQUI 359 operates, and operate and maintain TREA 99 at all times that any emissions are vented to TREA 99. The Permittee shall document periods of non-operation of the control equipment TREA 99 whenever EQUI 359 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.2	If the Permittee replaces TREA 99, the replacement control must meet or exceed the control efficiency requirements of TREA 99 as well as comply with all other requirements of TREA 99. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.428.7	Visible Emissions: The Permittee shall check the fabric filter stack STRU 125 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.428.8	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range

Requirement number	Requirement and citation
	specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.428.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.428.10	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.428.11	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.428.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.428.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.428.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.428.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 100	S2 Bentonite Storage Baghouse
5.429.1	The Permittee shall vent emissions from EQUI 154, EQUI 360, and EQUI 361 to TREA 100 whenever EQUI 154, EQUI 360, or EQUI 361 operates, and operate and maintain TREA 100 at all times that any emissions are vented to TREA 100. The Permittee shall document periods of non-operation of the control equipment TREA 100 whenever EQUI 154, EQUI 360, or EQUI 361 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.2	If the Permittee replaces TREA 100, the replacement control must meet or exceed the control efficiency requirements of TREA 100 as well as comply with all other requirements of TREA 100. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to

Requirement number	Requirement and citation
	the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.6	Pressure Drop ≥ 0.5 and ≤ 6.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.429.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.429.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.429.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.429.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.429.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.429.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]

Requirement number	Requirement and citation
5.429.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 101	Line 4 Bentonite Day Bin Baghouse
5.430.1	The Permittee shall vent emissions from EQUI 155, EQUI 156, EQUI 362, EQUI 363, and EQUI 364 to TREA 101 whenever EQUI 155, EQUI 156, EQUI 362, EQUI 363, or EQUI 364 operates, and operate and maintain TREA 101 at all times that any emissions are vented to TREA 101. The Permittee shall document periods of non-operation of the control equipment TREA 101 whenever EQUI 155, EQUI 156, EQUI 362, EQUI 363, and EQUI 364 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.2	If the Permittee replaces TREA 101, the replacement control must meet or exceed the control efficiency requirements of TREA 101 as well as comply with all other requirements of TREA 101. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.6	Pressure Drop ≥ 0.5 and ≤ 6.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.430.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee

	shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.430.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.430.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.430.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.430.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.430.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.430.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 102	Line 4 Bentonite Blending Baghouse
5.431.1	The Permittee shall vent emissions from EQUI 157, EQUI 158, EQUI 365, EQUI 366, and EQUI 367 to TREA 102 whenever from EQUI 157, EQUI 158, EQUI 365, EQUI 366, or EQUI 367 operates, and operate and maintain TREA 102 at all times that any emissions are vented to TREA 102. The Permittee shall document periods of non-operation of the control equipment TREA 102 whenever from EQUI 157, EQUI 158, EQUI 365, EQUI 366, or EQUI 367 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.431.2	If the Permittee replaces TREA 102, the replacement control must meet or exceed the control efficiency requirements of TREA 102 as well as comply with all other requirements of TREA 102. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.431.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.431.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.431.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.431.6	Pressure Drop $\geq$ 0.5 and $\leq$ 6.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.431.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.431.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.431.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.431.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.431.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.431.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.431.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 103	Agglomerators II Line 4 Grate Feed Scrubber

Requirement number	Requirement and citation
5.432.1	The Permittee shall vent emissions from EQUI 159 to TREA 103 whenever EQUI 159 operates, and operate and maintain TREA 103 at all times that any emissions are vented to TREA 103. The Permittee shall document periods of non-operation of the control equipment TREA 103 whenever EQUI 159 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.432.2	If the Permittee replaces TREA 103, the replacement control must meet or exceed the control efficiency requirements of TREA 103 as well as comply with all other requirements of TREA 103. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.432.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.432.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.432.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.432.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.432.7	Pressure Drop ≥ 3.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is

Requirement number	Requirement and citation
	set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.432.8	Water flow rate $\geq$ 42.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.432.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.432.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.432.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.432.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.432.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.432.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.432.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The

Requirement number	Requirement and citation
	monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.432.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.432.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.432.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.432.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.432.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits

Requirement number	Requirement and citation
	and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.432.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 104	Agglomerators II Line 4 Grate Discharge Scrubber
5.433.1	The Permittee shall vent emissions from EQUI 368 to TREA 104 whenever EQUI 368 operates, and operate and maintain TREA 104 at all times that any emissions are vented to TREA 104. The Permittee shall document periods of non-operation of the control equipment TREA 104 whenever EQUI 368 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.433.2	If the Permittee replaces TREA 104, the replacement control must meet or exceed the control efficiency requirements of TREA 104 as well as comply with all other requirements of TREA 104. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.433.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.433.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.433.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.433.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652.

Requirement number	Requirement and citation
	A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.433.7	Pressure Drop $\geq$ 3.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.433.8	Water flow rate $\geq$ 42.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.433.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.433.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.433.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.433.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.433.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subs. 4-5]

Requirement number	Requirement and citation
5.433.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.433.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.433.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.433.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.433.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.433.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or

Requirement number	Requirement and citation
	- if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.433.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.433.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 107	Agglomerator I Line 4 Cooler Discharge Scrubber
5.434.1	The Permittee shall vent emissions from EQUI 79 to TREA 107 whenever EQUI 79 operates, and operate and maintain TREA 107 at all times that any emissions are vented to TREA 107. The Permittee shall document periods of non-operation of the control equipment TREA 107 whenever EQUI 79 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.434.2	If the Permittee replaces TREA 107, the replacement control must meet or exceed the control efficiency requirements of TREA 107 as well as comply with all other requirements of TREA 107. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.434.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.434.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.434.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.434.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e);

Requirement number	Requirement and citation

5.434.7	Pressure Drop $\geq$ 1.7 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.434.8	Water flow rate $\geq$ 31 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.434.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.434.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.434.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.434.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as

Requirement number	Requirement and citation
	applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.434.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.434.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.434.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.434.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.434.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.434.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.434.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.434.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.434.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 108	41, 46 Conveyor Transfer Scrubber
5.435.1	The Permittee shall vent emissions from EQUI 46, EQUI 315, and EQUI 372 to TREA 108 whenever EQUI 46, EQUI 315, or EQUI 372 operates, and operate and maintain TREA 108 at all times that any emissions are vented to TREA 108. The Permittee shall document periods of non-operation of the control equipment TREA 108 whenever EQUI 46, EQUI 315, and EQUI 372 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 14]
5.435.2	If the Permittee replaces TREA 108, the replacement control must meet or exceed the control efficiency requirements of TREA 108 as well as comply with all other requirements of TREA 108. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.435.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.435.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.435.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.435.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.435.7	Pressure Drop $\geq$ 9.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.435.8	Water flow rate $\geq$ 240 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.435.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.435.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.435.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subps. 4-5]
5.435.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.435.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.435.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.435.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.435.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.435.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.435.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs.

Requirement number	Requirement and citation
	Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.435.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.435.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.435.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 110	Line 5 Bentonite Day Bin Baghouse
5.436.1	The Permittee shall vent emissions from EQUI 27, EQUI 28, EQUI 29, EQUI 30, and EQUI 316 to TREA 110 whenever EQUI 27, EQUI 28, EQUI 29, EQUI 30, or EQUI 316 operates, and operate and maintain TREA 110 at all times that any emissions are vented to TREA 110. The Permittee shall document periods of non-operation of the control equipment TREA 110 whenever EQUI 27, EQUI 28, EQUI 29, EQUI 30, or EQUI 316 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.436.2	If the Permittee replaces TREA 110, the replacement control must meet or exceed the control efficiency requirements of TREA 110 as well as comply with all other requirements of TREA 110. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.436.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.436.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.436.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.436.6	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.436.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.436.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.436.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.436.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.436.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.436.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.436.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be

Requirement number	Requirement and citation
	separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 111	Line 5 Bentonite Blending Baghouse
5.437.1	The Permittee shall vent emissions from TREA 111 to EQUI 31, EQUI 32, EQUI 33, EQUI 34, and EQUI 35 whenever EQUI 31, EQUI 32, EQUI 33, EQUI 34, or EQUI 35 operates, and operate and maintain TREA 111 at all times that any emissions are vented to TREA 111. The Permittee shall document periods of non-operation of the control equipment TREA 111 whenever TREA EQUI 31, EQUI 32, EQUI 33, EQUI 34, or EQUI 35 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.2	If the Permittee replaces TREA 111, the replacement control must meet or exceed the control efficiency requirements of TREA 111 as well as comply with all other requirements of TREA 111. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.437.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.437.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subps. 4-5]
5.437.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.437.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.437.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.437.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.437.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 112	Agglomerator II Line 5 Grate Feed Scrubber
5.438.1	The Permittee shall vent emissions from EQUI 36 to TREA 112 whenever EQUI 36 operates, and operate and maintain TREA 112 at all times that any emissions are vented to TREA 112. The Permittee shall document periods of non-operation of the control equipment TREA 112 whenever EQUI 36 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.438.2	If the Permittee replaces TREA 112, the replacement control must meet or exceed the control efficiency requirements of TREA 112 as well as comply with all other requirements of TREA 112. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.438.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.438.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.438.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.438.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.438.7	Pressure Drop $\geq$ 3.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.438.8	Water flow rate $\geq$ 42.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.438.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.438.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.438.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.438.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.438.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.438.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.438.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.438.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.438.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.438.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data

Requirement number	Requirement and citation
	acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.438.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.438.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.438.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 113	Agglomerator II Line 5 Grate Discharge Scrubber
5.439.1	The Permittee shall vent emissions from EQUI 37 and EQUI 368 to TREA 113 whenever EQUI 37 or EQUI 368 operates, and operate and maintain TREA 113 at all times that any emissions are vented to TREA 113. The Permittee shall document periods of non-operation of the control equipment TREA 113 whenever EQUI 37 or EQUI 368 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.439.2	If the Permittee replaces TREA 113, the replacement control must meet or exceed the control efficiency requirements of TREA 113 as well as comply with all other requirements of TREA 113. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.439.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.439.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.439.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.439.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.439.7	Pressure Drop $\geq$ 3.2 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.439.8	Water flow rate $\geq$ 42.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.439.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.439.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the

Requirement number	Requirement and citation
	required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.439.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.439.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.439.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.439.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.439.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.439.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.439.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.439.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the

Requirement number	Requirement and citation
	particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.439.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.439.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.439.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 115	Step I Coarse Crusher Baghouse
5.440.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8);

	40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.440.2	The Permittee shall vent emissions from EQUI 47 to TREA 115 whenever EQUI 47 operates, and operate and maintain TREA 115 at all times that any emissions are vented to TREA 115. The Permittee shall document periods of non-operation of the control equipment TREA 115 whenever EQUI 47 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.3	If the Permittee replaces TREA 115, the replacement control must meet or exceed the control efficiency requirements of TREA 115 as well as comply with all other requirements of TREA 115. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.440.8	Pressure Drop ≥ 3.0 and ≤ 12.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR

Requirement number	Requirement and citation
	63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.440.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.440.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.440.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.440.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.440.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.440.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.440.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.440.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.440.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.440.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 116	Step II Coarse Crusher Baghouse
5.441.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.442.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.442.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.442.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions

Requirement number	Requirement and citation
	taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.442.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.442.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.442.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.442.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 120	Step III Coarse Crusher Pan Feeders Scrubber
5.443.1	The Permittee shall vent emissions from TREA 281 and EQUI 375 to TREA 120 whenever TREA 120 operates, and operate and maintain TREA 120 at all times that any emissions are vented to TREA 120. The Permittee shall document periods of non-operation of the control equipment TREA 120 whenever TREA 281 or EQUI 375 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.443.2	If the Permittee replaces TREA 120, the replacement control must meet or exceed the control efficiency requirements of TREA 120 as well as comply with all other requirements of TREA 120. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit

Requirement number	Requirement and citation
	amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.443.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.443.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.443.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.443.6	Pressure Drop $\geq$ 11.2 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.443.7	Water flow rate $\geq$ 144 gallons per minute (Water Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.443.8	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.443.9	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.443.10	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.443.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of

Requirement number	Requirement and citation
	any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.443.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.443.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.443.14	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.443.15	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.443.16	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.443.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.443.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows:

Requirement number	Requirement and citation
	- Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.443.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.443.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 121	Step III Coarse Crusher Pan Feeders Scrubber
5.444.1	The Permittee shall vent emissions from EQUI 281 and EQUI 375 to TREA 121 whenever EQUI 281 or EQUI 375 operates, and operate and maintain TREA 121 at all times that any emissions are vented to TREA 121. The Permittee shall document periods of non-operation of the control equipment TREA 121 whenever EQUI 281 or EQUI 375 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.444.2	If the Permittee replaces TREA 121, the replacement control must meet or exceed the control efficiency requirements of TREA 121 as well as comply with all other requirements of TREA 121. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.444.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 96.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.444.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.444.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.444.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c);

Requirement number	Requirement and citation
	40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.444.7	Pressure Drop $\geq$ 4.9 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.444.8	Water flow rate $\geq$ 22.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.444.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.444.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.444.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.444.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the

Requirement number	Requirement and citation
	following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.444.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.444.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.444.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.444.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.444.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.444.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range

Requirement number	Requirement and citation
	Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.444.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.444.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.444.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 126	Transfer House Conveyor Transfer Scrubber
5.445.1	The Permittee shall vent emissions from EQUI 324 to TREA 126 whenever EQUI 324 operates, and operate and maintain TREA 126 at all times that any emissions are vented to TREA 126. The Permittee shall document periods of non-operation of the control equipment TRA 126 whenever EQUI 324 is operating. Note: TREA 244 will replace TREA 126. Prior to the startup and operation of TREA 244, the Permittee shall follow the requirements for TREA 126. After the startup and operation of TREA 244, TREA 126 shall be shut down, and the Permittee shall follow requirements for TREA 244 instead of TREA 126. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.445.2	If the Permittee replaces TREA 126, the replacement control must meet or exceed the control efficiency requirements of TREA 126 as well as comply with all other requirements of TREA 126. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.445.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency

Requirement number	Requirement and citation
	for Particulate Matter ≥ 96.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.445.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.9 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.445.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.445.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.445.7	Pressure Drop ≥ 2.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.445.8	Water flow rate ≥ 18.4 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.445.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.445.10	The Permittee shall record the daily average pressure drop at least once each operating day using the

Requirement number	Requirement and citation
	continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.445.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.445.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.445.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.445.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.445.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.445.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.445.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.445.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.445.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.445.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.445.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 127	Surge Pile/Reclaim Scrubber
5.446.1	The Permittee shall vent emissions from EQUI 325 to TREA 127 whenever EQUI 325 operates, and operate and maintain TREA 127 at all times that any emissions are vented to TREA 127. The Permittee shall document periods of non-operation of the control equipment TREA 127 whenever EQUI 325 is operating. Note: TREA 236 will replace TREA 127. Prior to the startup and operation of TREA 236, the Permittee

Requirement number	Requirement and citation
	shall follow the requirements for TREA 127. After the startup and operation of TREA 236, TREA 127 shall be shut down, and the Permittee shall follow requirements for TREA 236 instead of TREA 127. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.446.2	If the Permittee replaces TREA 127, the replacement control must meet or exceed the control efficiency requirements of TREA 127 as well as comply with all other requirements of TREA 127. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.446.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.446.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.446.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.446.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.446.7	Pressure Drop ≥ 2.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR

Requirement number	Requirement and citation
	63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.446.8	Water flow rate $\geq$ 18.4 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.446.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.446.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.446.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.446.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.446.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.446.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.446.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored

Requirement number	Requirement and citation
	scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.446.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.446.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.446.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.446.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.446.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall

Requirement number	Requirement and citation
	be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.446.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 130	Line 7 Bentonite Day Bin Baghouse
5.447.1	The Permittee shall vent emissions from EQUI 98, EQUI 99, and EQUI 100 to TREA 130 whenever EQUI 98, EQUI 99, or EQUI 100 operates, and operate and maintain TREA 130 at all times that any emissions are vented to TREA 130. The Permittee shall document periods of non-operation of the control equipment TREA 130 whenever EQUI 98, EQUI 99, or EQUI 100 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.2	If the Permittee replaces TREA 130, the replacement control must meet or exceed the control efficiency requirements of TREA 130 as well as comply with all other requirements of TREA 130. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 93 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.447.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.447.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.447.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.447.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.447.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.447.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.447.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 132	Line 5 Pellet Cooler Discharge Scrubber
5.448.1	The Permittee shall vent emissions from EQUI 272 to TREA 132 whenever EQUI 272 operates, and operate and maintain TREA 132 at all times that any emissions are vented to TREA 132. The Permittee shall document periods of non-operation of the control equipment TREA 132 whenever EQUI 272 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.448.2	If the Permittee replaces TREA 132, the replacement control must meet or exceed the control efficiency requirements of TREA 132 as well as comply with all other requirements of TREA 132. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.448.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.448.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.448.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.448.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.448.7	Pressure Drop $\geq$ 1.7 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.448.8	Water flow rate $\geq$ 31.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.448.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.448.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.448.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value

Requirement number	Requirement and citation
	was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.448.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.448.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.448.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.448.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.448.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.448.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.448.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of

Requirement number	Requirement and citation
	the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.448.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.448.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.448.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 133	41, 46 Conveyor Transfer Scrubber
5.449.1	The Permittee shall vent emissions from EQUI 81, EQUI 82, EQUI 272, and EQUI 273 to TREA 133 whenever EQUI 81, EQUI 82, EQUI 272, and EQUI 273 operate, and operate and maintain TREA 133 at all times that any emissions are vented to TREA 133. The Permittee shall document periods of non-operation of the control equipment TREA 133 whenever EQUI 81, EQUI 82, EQUI 272, or EQUI 273 are operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.449.2	If the Permittee replaces TREA 133, the replacement control must meet or exceed the control efficiency requirements of TREA 133 as well as comply with all other requirements of TREA 133. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.449.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency

Requirement number	Requirement and citation
	for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.449.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.449.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.449.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.449.7	Pressure Drop ≥ 9.4 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.449.8	Water flow rate ≥ 240 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.449.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.449.10	The Permittee shall record the daily average pressure drop at least once each operating day using the

Requirement number	Requirement and citation
	continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.449.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.449.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.449.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.449.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.449.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.449.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.449.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.449.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.449.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.449.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.449.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 134	Agglomerator III S3 Conveyor Transfer Scrubber
5.450.1	The Permittee shall vent emissions from EQUI 87 and EQUI 164 to TREA 134 whenever EQUI 87 or EQUI 164 operates, and operate and maintain TREA 134 at all times that any emissions are vented to TREA 134. The Permittee shall document periods of non-operation of the control equipment TREA 134 whenever EQUI 87 or EQUI 164 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.450.2	If the Permittee replaces TREA 134, the replacement control must meet or exceed the control

Requirement number	Requirement and citation
	efficiency requirements of TREA 134 as well as comply with all other requirements of TREA 134. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.450.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.450.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.450.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 30.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.450.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.450.7	Pressure Drop ≥ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.450.8	Water flow rate ≥ 33.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR

Requirement number	Requirement and citation
	63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.450.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.450.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.450.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.450.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.450.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.450.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.450.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.450.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.450.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.450.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.450.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.450.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.450.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to

Requirement number	Requirement and citation
	deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 135	S3 Bentonite Storage Baghouse
5.451.1	The Permittee shall vent emissions from EQUI 88, EQUI 89, EQUI 165 and EQUI 278 to TREA 135 whenever EQUI 88, EQUI 89, EQUI 165 or EQUI 278 operates, and operate and maintain TREA 135 at all times that any emissions are vented to TREA 135. The Permittee shall document periods of non-operation of the control equipment TREA 135 whenever EQUI 88, EQUI 89, EQUI 165 or EQUI 278 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.2	If the Permittee replaces TREA 135, the replacement control must meet or exceed the control efficiency requirements of TREA 135 as well as comply with all other requirements of TREA 135. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.6	Pressure Drop ≥ 0.5 and ≤ 6.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.451.7	Visible Emissions: The Permittee shall check the fabric filter stack STRU 139 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.451.8	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.451.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the

Requirement number	Requirement and citation
	following occur: - visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.451.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.451.11	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.451.12	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.451.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.451.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 136	Line 6 Bentonite Day Bin Baghouse
5.452.1	The Permittee shall vent emissions from EQUI 90, EQUI 91, EQUI 92, EQUI 166, and EQUI 167 to TREA 136 whenever EQUI 90, EQUI 91, EQUI 92, EQUI 166, or EQUI 167 operates, and operate and maintain TREA 136 at all times that any emissions are vented to TREA 136. The Permittee shall document periods of non-operation of the control equipment TREA 136 whenever EQUI 90, EQUI 91, EQUI 92, EQUI 166, or EQUI 167 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.452.2	If the Permittee replaces TREA 136, the replacement control must meet or exceed the control efficiency requirements of TREA 136 as well as comply with all other requirements of TREA 136. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.452.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.452.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.452.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.452.6	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.452.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.452.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.452.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.452.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.452.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.452.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.452.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be

Requirement number	Requirement and citation
	separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 137	Line 6 Bentonite Blending Baghouse
5.453.1	The Permittee shall vent emissions from EQUI 93, EQUI 94, EQUI 95, EQUI 168, and EQUI 269 to TREA 137 whenever EQUI 93, EQUI 94, EQUI 95, EQUI 168, or EQUI 269 operates, and operate and maintain TREA 137 at all times that any emissions are vented to TREA 137. The Permittee shall document periods of non-operation of the control equipment TREA 137 whenever EQUI 93, EQUI 94, EQUI 95, EQUI 168, or EQUI 269 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.2	If the Permittee replaces TREA 137, the replacement control must meet or exceed the control efficiency requirements of TREA 137 as well as comply with all other requirements of TREA 137. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.453.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.453.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subps. 4-5]
5.453.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.453.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.453.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.453.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.453.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 138	Line 6 Grate Feed Scrubber
5.454.1	The Permittee shall vent emissions from EQUI 96 to TREA 138 whenever EQUI 96 operates, and operate and maintain TREA 138 at all times that any emissions are vented to TREA 138. The Permittee shall document periods of non-operation of the control equipment TREA 138 whenever EQUI 96 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.454.2	If the Permittee replaces TREA 138, the replacement control must meet or exceed the control efficiency requirements of TREA 138 as well as comply with all other requirements of TREA 138. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.454.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.454.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.454.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.454.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.454.7	Pressure Drop $\geq$ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.454.8	Water flow rate $\geq$ 33 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.454.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.454.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.454.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.454.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.454.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.454.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.454.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.454.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.454.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.454.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data

Requirement number	Requirement and citation
	acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.454.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.454.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.454.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 139	Line 6 Grate Discharge Scrubber
5.455.1	The Permittee shall vent emissions from EQUI 97 to TREA 139 whenever EQUI 97 operates, and operate and maintain TREA 139 at all times that any emissions are vented to TREA 139. The Permittee shall document periods of non-operation of the control equipment TREA 139 whenever EQUI 97 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.455.2	If the Permittee replaces TREA 139, the replacement control must meet or exceed the control efficiency requirements of TREA 139 as well as comply with all other requirements of TREA 139. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.455.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.455.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency

Requirement number	Requirement and citation
	for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.455.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.455.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.455.7	Pressure Drop $\geq$ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.455.8	Water flow rate $\geq$ 33 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.455.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.455.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be

Requirement number	Requirement and citation
	reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.455.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.455.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.455.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.455.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.455.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.455.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.455.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.455.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as

Requirement number	Requirement and citation
	operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.455.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.455.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.455.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 143	Line 6 Waste Gas Stack Scrubber
5.456.1	The Permittee shall vent emissions from EQUI 3 to TREA 143 whenever EQUI 3 operates, and operate and maintain TREA 143 at all times that any emissions are vented to TREA 143. The Permittee shall document periods of non-operation of the control equipment TREA 143 whenever EQUI 3 is operating. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.2	If the Permittee replaces TREA 143, the replacement control must meet or exceed the control efficiency requirements of TREA 143 as well as comply with all other requirements of TREA 143. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 97.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.456.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 90.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.456.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 83.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.456.6	Pressure Drop ≥ 7.2 and ≤ 12 inches of water daily average (Pressure Drop Range Limit) unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.7	Water flow rate ≥ 2899 gallons per minute daily average (Flow Rate Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.8	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]

Requirement number	Requirement and citation
5.456.9	The Permittee shall operate and maintain the scrubber in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.456.10	The Permittee shall maintain and operate a pressure drop monitoring device that continuously indicates and records the pressure drop across the scrubber every 15 minutes. The permittee shall maintain and operate a water flow monitoring device that indicates and records the water flow rate of the scrubber every 15 minutes. The recording device shall also calculate the three-hour rolling average pressure drop and water flow rate. [40 CFR 64.3(b)(ii), Minn. R. 7017.0200]
5.456.11	The Permittee shall maintain a continuous hard copy readout or computer disk file of the pressure drop readings and water flow rate readings. Readings outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7017.0200]
5.456.12	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.456.13	If the recorded water flow rate is below the Water Flow Rate Limit, the emissions during that time shall be considered uncontrolled until the water flow rate is above the Water Flow Rate Limit. The period of time for which emissions are considered uncontrolled shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.456.14	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.456.15	Annual Calibration: The Permittee shall calibrate the pressure drop monitor at least once every 12 months and shall maintain a written record of the calibration and any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.456.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [40 CFR 64.3, Minn. R. 7017.0200]
5.456.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [40 CFR 64.3, Minn. R. 7017.0200]
5.456.18	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the recorded water flow rate is below the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each control device. [40 CFR 64.7(d), Minn. R. 7017.0200]

Requirement number	Requirement and citation
5.456.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.20	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Water Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.456.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]

Requirement number	Requirement and citation
5.456.22	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.456.23	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range or minimum water flow rate, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.456.24	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.456.25	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 145	Line 7 Bentonite Blending Baghouse
5.457.1	The Permittee shall vent emissions from EQUI 101, EQUI 102, EQUI 103, EQUI 176, and EQUI 177 to TREA 145 whenever from EQUI 101, EQUI 102, EQUI 103, EQUI 176, or EQUI 177 operates, and operate and maintain TREA 145 at all times that any emissions are vented to TREA 145. The Permittee shall document periods of non-operation of the control equipment TREA 145 whenever from EQUI 101, EQUI 102, EQUI 103, EQUI 176, or EQUI 177 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.457.2	If the Permittee replaces TREA 145, the replacement control must meet or exceed the control efficiency requirements of TREA 145 as well as comply with all other requirements of TREA 145. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.457.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.457.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 93 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.457.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 93 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.457.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. If the recorded pressure drop is outside the required range, the emissions during that time must be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range must be reported as a deviation. The Permittee must record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.457.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.457.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.457.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.457.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.457.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.457.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.457.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 146	Line 7 Grate Feed Scrubber
5.458.1	The Permittee shall vent emissions from EQUI 104 to TREA 146 whenever EQUI 104 operates, and operate and maintain TREA 146 at all times that any emissions are vented to TREA 146. The Permittee

Requirement number	Requirement and citation
	shall document periods of non-operation of the control equipment TREA 146 whenever EQUI 104 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.458.2	If the Permittee replaces TREA 146, the replacement control must meet or exceed the control efficiency requirements of TREA 146 as well as comply with all other requirements of TREA 146. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.458.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.458.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.458.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.458.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.458.7	Pressure Drop ≥ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R.

Requirement number	Requirement and citation
	7011.8030, Minn. R. 7017.2025]
5.458.8	Water flow rate $\geq$ 33 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.458.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.458.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.458.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.458.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.458.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.458.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.458.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]

Requirement number	Requirement and citation
5.458.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.458.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.458.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.458.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.458.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of

Requirement number	Requirement and citation
	preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.458.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 147	Line 7 Grate Discharge Scrubber
5.459.1	The Permittee shall vent emissions from EQUI 178 to TREA 147 whenever EQUI 178 operates, and operate and maintain TREA 147 at all times that any emissions are vented to TREA 147. The Permittee shall document periods of non-operation of the control equipment TREA 147 whenever EQUI 178 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.2	If the Permittee replaces TREA 147, the replacement control must meet or exceed the control efficiency requirements of TREA 147 as well as comply with all other requirements of TREA 147. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J.

Requirement number	Requirement and citation
	If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.459.7	Pressure Drop $\geq$ 3.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.459.8	Water flow rate $\geq$ 33 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.459.9	The Permittee shall record the water flow rate at least once each operating day. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.10	The Permittee shall record the pressure drop at least once each operating day. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.459.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall record the time and date of each pressure drop reading and water flow rate reading, and whether or not the recorded values were within the ranges specified in this permit. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.459.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.459.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.459.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn.

Requirement number	Requirement and citation
	R. 7007.0800, subps. 4-5]
5.459.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.459.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.459.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.459.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.459.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that

Requirement number	Requirement and citation
	approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.459.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.459.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 151	Line 7 Waste Gas Stack Scrubber
5.460.1	The Permittee shall vent emissions from EQUI 179 to TREA 151 whenever EQUI 179 operates, and operate and maintain TREA 151 at all times that any emissions are vented to TREA 151. The Permittee shall document periods of non-operation of the control equipment TREA 151 whenever EQUI 179 is operating. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.2	If the Permittee replaces TREA 151, the replacement control must meet or exceed the control efficiency requirements of TREA 151 as well as comply with all other requirements of TREA 151. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 97.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.460.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 90.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.460.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 83.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.460.6	Pressure Drop ≥ 5.7 and ≤ 12 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.7	Water flow rate ≥ 2897 gallons per minute daily average (Flow Rate Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.8	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1);

Requirement number	Requirement and citation
	40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.460.9	The Permittee shall operate and maintain the scrubber in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.460.10	The Permittee shall maintain and operate a pressure drop monitoring device that continuously indicates and records the pressure drop across the scrubber every 15 minutes. The permittee shall maintain and operate a water flow monitoring device that indicates and records the water flow rate of the scrubber every 15 minutes. The recording device shall also calculate the three-hour rolling average pressure drop and water flow rate. [40 CFR 64.3(b)(ii), Minn. R. 7017.0200]
5.460.11	The Permittee shall maintain a continuous hard copy readout or computer disk file of the pressure drop readings and water flow rate readings. Readings outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7017.0200]
5.460.12	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.460.13	If the recorded water flow rate is below the Water Flow Rate Limit, the emissions during that time shall be considered uncontrolled until the water flow rate is above the Water Flow Rate Limit. The period of time for which emissions are considered uncontrolled shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.460.14	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.460.15	Annual Calibration: The Permittee shall calibrate the pressure drop monitor at least once every 12 months and shall maintain a written record of the calibration and any action resulting from the

Requirement number	Requirement and citation
	calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.460.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [40 CFR 64.3, Minn. R. 7017.0200]
5.460.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [40 CFR 64.3, Minn. R. 7017.0200]
5.460.18	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the recorded water flow rate is below the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each control device. [40 CFR 64.7(d), Minn. R. 7017.0200]
5.460.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.20	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Water Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.460.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.460.22	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.460.23	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range or minimum water flow rate, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.460.24	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.460.25	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 171	Hill Wood Products Baghouse
5.461.1	The Permittee shall vent emissions from EQUI 266 to TREA 171 whenever EQUI 266 operates, and operate and maintain TREA 171 at all times that any emissions are vented to TREA 171. The Permittee shall document periods of non-operation of the control equipment TREA 171 whenever EQUI 266 is operating. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.461.2	If the Permittee replaces TREA 171, the replacement control must meet or exceed the control efficiency requirements of TREA 171 as well as comply with all other requirements of TREA 171. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.461.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 90 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.461.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 90 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.461.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 93 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.461.6	Pressure Drop ≥ 0.5 and ≤ 6.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. During inclement weather, the Permittee shall record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.461.7	Visible Emissions: The Permittee shall check the fabric filter stack STRU 259 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.461.8	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.461.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

Requirement number	Requirement and citation
5.461.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.461.11	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.461.12	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.461.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturing specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.461.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.461.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 172	Line 3 Grate Feed Dynamic Wet Scrubber
5.462.1	The Permittee shall vent emissions from EQUI 347 to TREA 172 whenever EQUI 347 operates, and operate and maintain TREA 172 at all times that any emissions are vented to EQUI 347. The Permittee shall document periods of non-operation of the control equipment TREA 172 whenever EQUI 347 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.462.2	If the Permittee replaces TREA 172, the replacement control must meet or exceed the control efficiency requirements of TREA 172 as well as comply with all other requirements of TREA 172. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.462.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.462.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.462.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.462.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.462.7	Fan amperage $\geq$ 25.2 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp.14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.462.8	Water flow rate $\geq$ 7.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.462.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.462.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.462.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value

Requirement number	Requirement and citation
	was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.462.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.462.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.462.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.462.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.462.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.462.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.462.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs.

Requirement number	Requirement and citation
	The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.462.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.462.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 173	Line 3 Grate Discharge Dynamic Wet Scrubber
5.463.1	The Permittee shall vent emissions from EQUI 348 to TREA 173 whenever EQUI 348 operates, and operate and maintain TREA 173 at all times that any emissions are vented to TREA 173. The Permittee shall document periods of non-operation of the control equipment TREA 173 whenever EQUI 348 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.463.2	If the Permittee replaces TREA 173, the replacement control must meet or exceed the control efficiency requirements of TREA 173 as well as comply with all other requirements of TREA 173. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.463.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.463.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.463.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.463.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as

Requirement number	Requirement and citation
	follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.463.7	Fan amperage $\geq$ 25.2 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp.14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.463.8	Water flow rate $\geq$ 7.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.463.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.463.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.463.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this

Requirement number	Requirement and citation
	permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.463.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.463.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.463.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.463.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.463.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.463.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.463.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs.

Requirement number	Requirement and citation
	The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.463.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.463.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 174	Line 3 Cooler Discharge Dynamic Wet Scrubber
5.464.1	The Permittee shall vent emissions from EQUI 147 to TREA 174 whenever EQUI 147 operates, and operate and maintain TREA 174 at all times that any emissions are vented to TREA 174. The Permittee shall document periods of non-operation of the control equipment TREA 174 whenever EQUI 147 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.464.2	If the Permittee replaces TREA 174, the replacement control must meet or exceed the control efficiency requirements of TREA 174 as well as comply with all other requirements of TREA 174. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.464.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.464.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.464.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.464.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (I); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.464.7	Fan amperage $\geq$ 86.8 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp.14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.464.8	Water flow rate $\geq$ 28.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.464.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.464.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.464.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subps. 4-5]
5.464.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.464.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.464.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.464.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.464.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.464.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.464.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that

Requirement number	Requirement and citation
	approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.464.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.464.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 175	Line 3 Pellet Cooler Dynamic Wet Scrubber
5.465.1	The Permittee shall vent emissions from EQUI 351 to TREA 175 whenever EQUI 351 operates, and operate and maintain TREA 175 at all times that any emissions are vented to TREA 175. The Permittee shall document periods of non-operation of the control equipment TREA 175 whenever EQUI 351 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.465.2	If the Permittee replaces TREA 175, the replacement control must meet or exceed the control efficiency requirements of TREA 175 as well as comply with all other requirements of TREA 175. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.465.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.465.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.465.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.465.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.465.7	Fan amperage $\geq$ 25.2 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.465.8	Water flow rate $\geq$ 7.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.465.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.465.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.465.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.465.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.465.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.465.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.465.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.465.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.465.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.465.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.465.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.465.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 176	Step I Agglomerator 042 043 Conveyor Dynamic Wet Scrubber
5.466.1	The Permittee shall vent emissions from EQUI 149 and EQUI 353 to TREA 176 whenever EQUI 149 or EQUI 353 operates, and operate and maintain TREA 176 at all times that any emissions are vented to TREA 176. The Permittee shall document periods of non-operation of the control equipment TREA 176 whenever EQUI 149 or EQUI 353 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.466.2	If the Permittee replaces TREA 176, the replacement control must meet or exceed the control efficiency requirements of TREA 176 as well as comply with all other requirements of TREA 176. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.466.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.466.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.466.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.466.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.466.7	Fan amperage $\geq$ 25.2 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.466.8	Water flow rate $\geq$ 7.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.466.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.466.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.466.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.466.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.466.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.466.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.466.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.466.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.466.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.466.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.466.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.466.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 177	Line 3 Conveyor Transfer 041 042 Dynamic Wet Scrubber
5.467.1	The Permittee shall vent emissions from EQUI 150 and EQUI 354 to TREA 177 whenever EQUI 150 or EQUI 354 operates, and operate and maintain TREA 177 at all times that any emissions are vented to TREA 177. The Permittee shall document periods of non-operation of the control equipment TREA 177 whenever EQUI 150 or EQUI 354 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.467.2	If the Permittee replaces TREA 177, the replacement control must meet or exceed the control efficiency requirements of TREA 177 as well as comply with all other requirements of TREA 177. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.467.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.467.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.467.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.467.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows:

Requirement number	Requirement and citation
	40 CFR 63.9590(c); 40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.467.7	Fan amperage $\geq$ 25.2 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.467.8	Water flow rate $\geq$ 7.0 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.467.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.467.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.467.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.467.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.467.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.467.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.467.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.467.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.467.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.467.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.467.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.467.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 178	Line 4 Fines Conveyor Dynamic Wet Scrubber
5.468.1	The Permittee shall vent emissions from EQUI 371 to TREA 178 whenever EQUI 371 operates, and operate and maintain TREA 178 at all times that any emissions are vented to TREA 178. The Permittee shall document periods of non-operation of the control equipment TREA 178 whenever EQUI 371 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.468.2	If the Permittee replaces TREA 178, the replacement control must meet or exceed the control efficiency requirements of TREA 178 as well as comply with all other requirements of TREA 178. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.468.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.468.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.468.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.468.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c);

Requirement number	Requirement and citation
	40 CFR 63.9590(b)(2); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.468.7	Fan amperage $\geq$ 86.6 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.468.8	Water flow rate $\geq$ 28 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.468.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.468.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.468.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.468.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the

Requirement number	Requirement and citation
	following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.468.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.468.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.468.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.468.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.468.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.468.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]

Requirement number	Requirement and citation
5.468.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.468.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 179	Line 5 Fines Conveyor Dynamic Wet Scrubber
5.469.1	The Permittee shall vent emissions from EQUI 42 to TREA 179 whenever EQUI 42 operates, and operate and maintain TREA 179 at all times that any emissions are vented to TREA 179. The Permittee shall document periods of non-operation of the control equipment TREA 179 whenever EQUI 42 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.469.2	If the Permittee replaces TREA 179, the replacement control must meet or exceed the control efficiency requirements of TREA 179 as well as comply with all other requirements of TREA 179. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.469.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.469.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.469.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.469.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(2);

Requirement number	Requirement and citation
	40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(c); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (f), & (l); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.469.7	Fan amperage $\geq$ 86.8 amperes daily average (Fan Amperage Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp.14, Minn. R. 7011.8030, Minn. R. 7017.2025]
5.469.8	Water flow rate $\geq$ 28 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(2), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7011.8030]
5.469.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.469.10	The Permittee shall record the daily average fan amperage at least once each operating day using the continuous monitor data. If the recorded fan amperage is below the required limit, the emissions during that time shall be considered uncontrolled until the daily average fan amperage is once again above the required limit. The period of time for which the fan amperage is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.469.11	Recordkeeping of Fan Amperage and Water Flow Rate: The Permittee shall maintain a continuous written record of the fan amperage and water flow rate readings. The permittee shall record the daily average fan amperage reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.469.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur:

Requirement number	Requirement and citation
	- the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.469.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.469.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.469.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording fan amperage and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.469.16	The Permittee shall calibrate or replace the fan amperage and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.469.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.469.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.469.19	Protocol for Resetting the Fan Amperage Limit: The Permittee shall conduct performance testing to

Requirement number	Requirement and citation
	measure the PM emission rate as required elsewhere in this permit. If the established Fan Amperage Limit is to be reset, the reset shall be based on the fan amperage values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Fan Amperage Limit shall be reset as follows: - Using the CPMS, measure and record the fan amperage every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average fan amperage for each individual test run. - The operating limit shall be reset as the lowest average fan amperage value corresponding to any of the three test runs. Ongoing compliance with Fan Amperage Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Fan Amperage Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.469.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 185	Agglomerator III Line 7 Conveyor Transfer Scrubber
5.470.1	The Permittee shall vent emissions from EQUI 122 and EQUI 123 to TREA 185 whenever EQUI 122 or EQUI 123 operates, and operate and maintain TREA 185 at all times that any emissions are vented to TREA 185. The Permittee shall document periods of non-operation of the control equipment TREA 185 whenever EQUI 122 or EQUI 123 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.470.2	If the Permittee replaces TREA 185, the replacement control must meet or exceed the control efficiency requirements of TREA 185 as well as comply with all other requirements of TREA 185. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.470.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.470.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.470.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.470.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1);

Requirement number	Requirement and citation
	40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.470.7	Pressure Drop $\geq$ 5.6 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.470.8	Water flow rate $\geq$ 130 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.470.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.470.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.470.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.470.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur:

Requirement number	Requirement and citation
	- the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.470.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.470.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.470.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.470.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.470.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.470.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results

Requirement number	Requirement and citation
	and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.470.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.470.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.470.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 187	Step III Storage Bin Line 15, 16 Scrubber
5.471.1	The Permittee shall vent emissions from EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, and EQUI 250 to TREA 187 whenever EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, or EQUI 250 operates, and operate and maintain TREA 187 at all times that any emissions are vented to TREA 187. The Permittee shall document periods of non-operation of the control equipment TREA 187 whenever EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, or EQUI 250 is operating. Note: TREA 217 will replace TREA 187. Prior to the startup and operation of TREA 217, the Permittee shall follow the requirements for TREA 187. After the startup and operation of TREA 217, TREA 187 shall be shut down, and the Permittee shall follow requirements for TREA 217. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.471.2	If the Permittee replaces TREA 187, the replacement control must meet or exceed the control efficiency requirements of TREA 187 as well as comply with all other requirements of TREA 187. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.471.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.471.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.471.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.471.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.471.7	Pressure Drop $\geq$ 5.3 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.471.8	Water flow rate $\geq$ 58 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.471.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.471.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.471.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.471.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.471.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.471.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.471.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.471.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.471.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.471.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.471.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.471.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.471.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 188	Storage Bins Lines 1,2 Scrubber
5.472.1	The Permittee shall vent emissions from EQUI 209, EQUI 210, EQUI 211, EQUI 212, EQUI 213, EQUI 214, and EQUI 215 to TREA 188 whenever EQUI 209, EQUI 210, EQUI 211, EQUI 212, EQUI 213, EQUI 214, or EQUI 215 operates, and operate and maintain TREA 188 at all times that any emissions are vented to TREA 188. The Permittee shall document periods of non-operation of the control equipment TREA 188 whenever EQUI 209, EQUI 210, EQUI 211, EQUI 212, EQUI 213, EQUI 214, or

Requirement number	Requirement and citation
	EQUI 215 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.472.2	If the Permittee replaces TREA 188, the replacement control must meet or exceed the control efficiency requirements of TREA 188 as well as comply with all other requirements of TREA 188. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.472.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.472.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.472.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.472.6	Pressure Drop ≥ 5.0 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.472.7	Water flow rate ≥ 50 gallons per minute daily average (Flow Rate Limit) unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.472.8	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.472.9	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.472.10	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.472.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.472.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.472.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.472.14	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.472.15	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.472.16	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.472.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.472.18	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow

Requirement number	Requirement and citation
	Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.472.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.472.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 189	Storage Bins Lines 3,4 Scrubber
5.473.1	The Permittee shall vent emissions from EQUI 19, EQUI 216, EQUI 217, EQUI 218, EQUI 219, EQUI 220, and EQUI 221 to TREA 189 whenever EQUI 19, EQUI 216, EQUI 217, EQUI 218, EQUI 219, EQUI 220, or EQUI 221 operates, and operate and maintain TREA 189 at all times that any emissions are vented to TREA 189. The Permittee shall document periods of non-operation of the control equipment TREA 189 whenever EQUI 19, EQUI 216, EQUI 217, EQUI 218, EQUI 219, EQUI 220, or EQUI 221 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.473.2	If the Permittee replaces TREA 189, the replacement control must meet or exceed the control efficiency requirements of TREA 189 as well as comply with all other requirements of TREA 189. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.473.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.473.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.473.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.473.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.473.7	Pressure Drop $\geq$ 4.1 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.473.8	Water flow rate $\geq$ 42 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.473.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.473.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.473.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily

Requirement number	Requirement and citation
	average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.473.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.473.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.473.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.473.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.473.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.473.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.473.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the

Requirement number	Requirement and citation
	Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.473.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.473.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.473.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 190	Storage Bins Lines 5,6 Scrubber
5.474.1	The Permittee shall vent emissions from EQUI 222, EQUI 223, EQUI 224, and EQUI 225 to TREA 190 whenever EQUI 222, EQUI 223, EQUI 224, or EQUI 225 operates, and operate and maintain TREA 190 at all times that any emissions are vented to TREA 190. The Permittee shall document periods of non-operation of the control equipment TREA 190 whenever EQUI 222, EQUI 223, EQUI 224, or EQUI 225 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.474.2	If the Permittee replaces TREA 190, the replacement control must meet or exceed the control efficiency requirements of TREA 190 as well as comply with all other requirements of TREA 190. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.474.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.474.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.474.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

5.474.8	Water flow rate ≥ 42 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.474.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]

Requirement number	Requirement and citation
5.474.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.474.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subps. 4-5]
5.474.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.474.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.474.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.474.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.474.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.474.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.474.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.474.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.474.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.474.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 191	Storage Bins Lines 7,8 Scrubber
5.475.1	The Permittee shall vent emissions from EQUI 23, EQUI 24, EQUI 226, EQUI 227, EQUI 228, EQUI 229, and EQUI 230 to TREA 191 whenever EQUI 23, EQUI 24, EQUI 226, EQUI 227, EQUI 228, EQUI 229, or EQUI 230 operates, and operate and maintain TREA 191 at all times that any emissions are vented to TREA 191. The Permittee shall document periods of non-operation of the control equipment TREA 191 whenever EQUI 23, EQUI 24, EQUI 226, EQUI 227, EQUI 228, EQUI 229, or EQUI 230 is operating.

5.476.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.476.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.476.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subs. 4-5]

Requirement number	Requirement and citation
5.476.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.476.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.476.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.476.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.476.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.476.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or

Requirement number	Requirement and citation
	- if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.476.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.476.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 193	Storage Bins Lines 11,12 Scrubber
5.477.1	The Permittee shall vent emissions from EQUI 235, EQUI 236, EQUI 237, EQUI 238, and EQUI 239 to TREA 193 whenever EQUI 235, EQUI 236, EQUI 237, EQUI 238, or EQUI 239 operates, and operate and maintain TREA 193 at all times that any emissions are vented to TREA 193. The Permittee shall document periods of non-operation of the control equipment TREA 193 whenever EQUI 235, EQUI 236, EQUI 237, EQUI 238, or EQUI 239 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.477.2	If the Permittee replaces TREA 193, the replacement control must meet or exceed the control efficiency requirements of TREA 193 as well as comply with all other requirements of TREA 193. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.477.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.477.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.477.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.477.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f);

Requirement number	Requirement and citation
	40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.477.7	Pressure Drop $\geq$ 4.1 inches of water daily average (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.477.8	Water flow rate $\geq$ 42 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3 and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.477.9	The Permittee shall calculate and record the daily average water flow rate at least once each operating day using the continuous monitor data. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.477.10	The Permittee shall record the daily average pressure drop at least once each operating day using the continuous monitor data. If the recorded pressure drop is below the required limit, the emissions during that time shall be considered uncontrolled until the pressure drop is once again above the required limit. The period of time for which the pressure drop is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B)]
5.477.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall maintain a continuous written record of the pressure drop and water flow rate readings. The permittee shall record the daily average pressure drop reading and water flow rate reading and whether or not the observed value was within the range specified in this permit. Recorded values outside any range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subs. 4-5]
5.477.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.477.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.477.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.477.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.477.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.477.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.477.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.477.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow

Requirement number	Requirement and citation
	Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.477.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.477.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 194	Step I Tertiary Crusher Line 1 Baghouse
5.478.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R.

	7007.1150-7007.1500, Minn. R. 7011.8030]
5.478.2	The Permittee shall vent emissions from EQUI 386 to TREA 194 whenever EQUI 386 operates, and operate and maintain TREA 194 at all times that any emissions are vented to TREA 194. The Permittee shall document periods of non-operation of the control equipment TREA whenever EQUI 386 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.3	If the Permittee replaces TREA 194, the replacement control must meet or exceed the control efficiency requirements of TREA 194 as well as comply with all other requirements of TREA 194. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.478.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.478.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.478.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.478.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or

Requirement number	Requirement and citation
	- the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.478.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.478.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.478.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.478.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.478.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]

5.479.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.479.2	The Permittee shall vent emissions from EQUI 388 to TREA 195 whenever EQUI 388 operates, and operate and maintain TREA 195 at all times that any emissions are vented to TREA 195. The Permittee shall document periods of non-operation of the control equipment TREA 195 whenever EQUI 388 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.479.3	If the Permittee replaces TREA 195, the replacement control must meet or exceed the control efficiency requirements of TREA 195 as well as comply with all other requirements of TREA195. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.479.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.479.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.479.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.479.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.479.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.479.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.479.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.479.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.479.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.479.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.479.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions

	taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.479.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.479.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.479.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.479.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

R. 7011.8030, Minn. R. 7017.2025]
5.481.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.481.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.481.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.481.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.481.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.481.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.481.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.481.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.481.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to

Requirement number	Requirement and citation
	deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.481.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 198	Step I Tertiary Crusher Line 5 Baghouse
5.482.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.482.2	The Permittee shall vent emissions from EQUI 337 to TREA 198 whenever EQUI 337 operates, and operate and maintain TREA 198 at all times that any emissions are vented to TREA 198. The Permittee shall document periods of non-operation of the control equipment TREA 198 whenever EQUI 337 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.3	If the Permittee replaces TREA 198, the replacement control must meet or exceed the control efficiency requirements of TREA 198 as well as comply with all other requirements of TREA 198. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and

Requirement number	Requirement and citation
	emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.482.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.482.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.482.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.482.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.484.2	The Permittee shall vent emissions from EQUI 54 and EQUI 55 to TREA 200 whenever EQUI 54 or EQUI

Requirement number	Requirement and citation
	55 operates, and operate and maintain TREA 200 at all times that any emissions are vented to TREA 200. The Permittee shall document periods of non-operation of the control equipment TREA 200 whenever EQUI 54 or EQUI 55 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.3	If the Permittee replaces TREA 200, the replacement control must meet or exceed the control efficiency requirements of TREA 200 as well as comply with all other requirements of TREA 200. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.484.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.484.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.484.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.484.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.484.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.484.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.484.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.484.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.484.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.484.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to

Requirement number	Requirement and citation
	deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.484.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 201	Step I Tertiary Crusher Line 8 Baghouse
5.485.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.485.2	The Permittee shall vent emissions from EQUI 54 and EQUI 56 to TREA 201 whenever EQUI 54 or EQUI 56 operates, and operate and maintain TREA 201 at all times that any emissions are vented to TREA 201. The Permittee shall document periods of non-operation of the control equipment TREA 201 whenever EQUI 54 or EQUI 56 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.485.3	If the Permittee replaces TREA 201, the replacement control must meet or exceed the control efficiency requirements of TREA 201 as well as comply with all other requirements of TREA 201. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.485.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.485.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.485.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.485.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.485.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.485.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.485.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.485.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. R. 7007.0800, subp. 5]
5.486.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.486.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three

Requirement number	Requirement and citation
	compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.486.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.486.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

5.487.2	The Permittee shall vent emissions from EQUI 58 and EQUI 66 to TREA 203 whenever EQUI 58 or EQUI 66 operates, and operate and maintain TREA 203 at all times that any emissions are vented to TREA 203. The Permittee shall document periods of non-operation of the control equipment TREA 203 whenever EQUI 58 or EQUI 66 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.3	If the Permittee replaces TREA 203, the replacement control must meet or exceed the control efficiency requirements of TREA 203 as well as comply with all other requirements of TREA 203. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.487.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.487.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.487.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.487.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or

Requirement number	Requirement and citation
	- the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.487.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.487.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.487.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.487.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.487.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. 5.489.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.489.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.489.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be

Requirement number	Requirement and citation
	considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.489.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.489.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.489.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.489.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.489.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.489.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.489.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.489.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.489.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.489.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 206	Step I Tertiary Crusher Line 13 Baghouse
5.490.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application

Requirement number	Requirement and citation
	for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.490.2	The Permittee shall vent emissions from EQUI 61 and EQUI 68 to TREA 206 whenever EQUI 61 or EQUI 68 operates, and operate and maintain TREA 206 at all times that any emissions are vented to TREA 206. The Permittee shall document periods of non-operation of the control equipment TREA 206 whenever EQUI 61 or EQUI 68 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.3	If the Permittee replaces TREA 206[, the replacement control must meet or exceed the control efficiency requirements of TREA 206 as well as comply with all other requirements of TREA 206. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.490.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.490.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.490.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.490.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the

Requirement number	Requirement and citation
	following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 208	Step I Tertiary Crusher Line 15 Baghouse
5.492.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b);

Requirement number	Requirement and citation
	40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.492.2	The Permittee shall vent emissions from EQUI 63 and EQUI 65 to TREA 208 whenever EQUI 63 or EQUI 65 operates, and operate and maintain TREA 208 at all times that any emissions are vented to TREA 208. The Permittee shall document periods of non-operation of the control equipment TREA 208 whenever EQUI 63 or EQUI 65 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.3	If the Permittee replaces TREA 208, the replacement control must meet or exceed the control efficiency requirements of TREA 208 as well as comply with all other requirements of TREA 208. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.492.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below.

Requirement number	Requirement and citation
	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.492.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.492.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.492.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.492.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.492.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.492.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.492.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.492.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was

Requirement number	Requirement and citation
	demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.492.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.492.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 209	Step I Tertiary Crusher Line 16 Baghouse
5.493.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J.

Requirement number	Requirement and citation
	If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.493.2	The Permittee shall vent emissions from EQUI 64 and EQUI 65 to TREA 209 whenever EQUI 64 or EQUI 65 operates, and operate and maintain TREA 209 at all times that any emissions are vented to TREA 209. The Permittee shall document periods of non-operation of the control equipment TREA 209 whenever EQUI 64 or EQUI 65 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.3	If the Permittee replaces TREA 209, the replacement control must meet or exceed the control efficiency requirements of TREA 209 as well as comply with all other requirements of TREA 209. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.493.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.493.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.493.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp.

Requirement number	Requirement and citation
	2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.493.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.493.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.493.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.493.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.493.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.493.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound).

Requirement number	Requirement and citation
	Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.493.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.493.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 210	Conveyor Transfer 004-005 Baghouse
5.494.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.494.2	The Permittee shall vent emissions from EQUI 321, EQUI 322, EQUI 323, EQUI 378, EQUI 379, and EQUI 380 to TREA 210 whenever EQUI 321, EQUI 322, EQUI 323, EQUI 378, EQUI 379, or EQUI 380 operates, and operate and maintain TREA 210 at all times that any emissions are vented to TREA 210. The Permittee shall document periods of non-operation of the control equipment TREA 210 whenever EQUI 321, EQUI 322, EQUI 323, EQUI 378, EQUI 379, or EQUI 380 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.3	If the Permittee replaces TREA 210, the replacement control must meet or exceed the control efficiency requirements of TREA 210 as well as comply with all other requirements of TREA 210. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable.

Requirement number	Requirement and citation
	If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.494.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.494.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.494.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.494.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.494.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 4]
5.494.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.494.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.494.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.494.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.494.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.494.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 211	Agglomerators I & II Bentonite Unloading Baghouse

Requirement number	Requirement and citation
5.495.1	The Permittee shall vent emissions from EQUI 90, EQUI 91, EQUI 92, EQUI 166, and EQUI 167 to TREA 211 whenever EQUI 90, EQUI 91, EQUI 92, EQUI 166, or EQUI 167 operates, and operate and maintain TREA 211 at all times that any emissions are vented to TREA 136. The Permittee shall document periods of non-operation of the control equipment TREA 211 whenever EQUI 90, EQUI 91, EQUI 92, EQUI 166, or EQUI 167 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.2	The Permittee shall vent emissions from EQUI 359 to TREA 211 whenever EQUI 359 operates, and operate and maintain TREA 211 at all times that any emissions are vented to TREA 211. The Permittee shall document periods of non-operation of the control equipment TREA 211 whenever EQUI 359 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.3	If the Permittee replaces TREA 211, the replacement control must meet or exceed the control efficiency requirements of TREA 211 as well as comply with all other requirements of TREA 211. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.495.7	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. During inclement weather, the Permittee shall record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.495.8	Visible Emissions: The Permittee shall check the fabric filter stack STRU 125 for any visible emissions once each day of operation during daylight hours. If there are visible emissions, the emissions shall be considered uncontrolled until there are no longer visible emissions. The period of time for which there are visible emissions shall be reported as a deviation. During inclement weather, the Permittee shall read and record the pressure drop across the fabric filter, once each day of operation. [Minn. R. 7007.0800, subps. 4-5]
5.495.9	Recordkeeping of Visible Emissions and Pressure Drop. The Permittee shall record the time and date of each visible emission inspection and pressure drop reading, and whether or not any visible emissions were observed, and whether or not the observed pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.495.10	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur:

Requirement number	Requirement and citation
	- visible emissions are observed; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, eliminate visible emissions, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.495.11	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.495.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.495.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.495.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.495.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 212	Step I & II Conveyor transfer 010-01 Baghouse
5.496.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J.

Requirement number	Requirement and citation
	If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.496.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.3	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.6	The Permittee shall vent emissions from EQUI 77, EQUI 78, EQUI 319, and EQUI 320 to TREA 212 whenever EQUI 77, EQUI 78, EQUI 319, or EQUI 320 operates, and operate and maintain TREA 212 at all times that any emissions are vented to TREA 212. The Permittee shall document periods of non-operation of the control equipment TREA 212 whenever EQUI 77, EQUI 78, EQUI 319, or EQUI 320 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.7	If the Permittee replaces TREA 212, the replacement control must meet or exceed the control efficiency requirements of TREA 212 as well as comply with all other requirements of TREA 212. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.496.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.496.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.496.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit

Requirement number	Requirement and citation
	are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.496.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.496.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.496.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.496.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.496.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.496.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound).

Requirement number	Requirement and citation
	Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.496.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.496.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 213	Step I conveyor 005-006 Baghouse
5.497.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.497.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.497.3	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.497.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.497.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.497.6	The Permittee shall vent emissions from EQUI 330, EQUI 383, and EQUI 384 to TREA 213 whenever EQUI 330, EQUI 383, or EQUI 384 operates, and operate and maintain TREA 213 at all times that any emissions are vented to TREA 213. The Permittee shall document periods of non-operation of the control equipment TREA 213 whenever EQUI 330, EQUI 383, or EQUI 384 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.497.7	If the Permittee replaces TREA 213, the replacement control must meet or exceed the control efficiency requirements of TREA 213 as well as comply with all other requirements of TREA 213. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.497.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.497.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.497.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.497.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.497.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 4]
5.497.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.497.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.497.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.497.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.497.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.497.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 214	Limestone Conveyor Transfer Baghouse

Requirement number	Requirement and citation
5.498.1	The Permittee shall vent emissions from EQUI 704 to TREA 214 whenever EQUI 704 operates, and operate and maintain TREA 214 at all times that any emissions are vented to TREA 214. The Permittee shall document periods of non-operation of the control equipment TREA 214 whenever EQUI 704 is operating. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.498.2	If the Permittee replaces TREA 214, the replacement control must meet or exceed the control efficiency requirements of TREA 214 as well as comply with all other requirements of TREA 214. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.498.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.498.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.498.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.498.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2)]
5.498.7	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.498.8	Pressure Drop: Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.498.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.498.10	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]

Requirement number	Requirement and citation
5.498.11	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.498.12	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.498.13	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
TREA 215	Step III conveyor 005-006 Baghouse
5.499.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.499.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.499.3	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.499.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.499.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.499.6	The Permittee shall vent emissions from EQUI 309, and EQUI 310 to TREA 215 whenever EQUI 309, or EQUI 310 operates, and operate and maintain TREA 215 at all times that any emissions are vented to TREA 215. The Permittee shall document periods of non-operation of the control equipment TREA 215 whenever EQUI 309, or EQUI 310 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.499.7	If the Permittee replaces TREA 215, the replacement control must meet or exceed the control efficiency requirements of TREA 215 as well as comply with all other requirements of TREA 215. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.499.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.499.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.499.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.499.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.499.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment

Requirement number	Requirement and citation
	must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.499.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.499.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.499.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.499.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.499.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.499.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 216	Step III Storage Bin Lines 17, 18 Baghouse

5.500.3	If the Permittee replaces TREA 216, the replacement control must meet or exceed the control efficiency requirements of TREA 216 as well as comply with all other requirements of TREA 216. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.500.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.500.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.500.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.500.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.500.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.500.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.500.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.500.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.500.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.500.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.500.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.500.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subps. 4-5]
5.500.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.500.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.500.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 217	Storage Bin L15,16 Cartridge Filter
5.501.1	The Permittee is authorized to construct and operate TREA 217 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.501.2	After the startup and operation of TREA 217, the Permittee shall vent emissions from EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, and EQUI 250, to TREA 217 whenever EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, or EQUI 250 operates, and operate and maintain TREA 217 at all times that any emissions are vented to TREA 217. The Permittee shall document periods of non-operation of the control equipment TREA 217 whenever EQUI 137, EQUI 138, EQUI 139, EQUI 247, EQUI 248, EQUI 249, or EQUI 250 is operating. Note: TREA 217 will replace TREA 187. Prior to the startup and operation of TREA 217, the Permittee shall follow the requirements for TREA 187. After the startup and operation of TREA 217, TREA 187 shall be shut down, and the Permittee shall follow requirements for TREA 217. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.3	If the Permittee replaces TREA 217, the replacement control must meet or exceed the control efficiency requirements of TREA 217 as well as comply with all other requirements of TREA 217. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.501.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.6	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.501.9	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below.

Requirement number	Requirement and citation
	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.501.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.501.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.501.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.501.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.501.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.501.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.501.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows:

Requirement number	Requirement and citation
	- if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.501.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.501.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 218	Step III Storage Bin Lines 13, 14 Baghouse
5.502.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.502.2	The Permittee shall vent emissions from EQUI 136, EQUI 174, EQUI 242, EQUI 243, EQUI 244, EQUI 245, and EQUI 246 to TREA 218 whenever EQUI 136, EQUI 174, EQUI 242, EQUI 243, EQUI 244, EQUI

Requirement number	Requirement and citation
	245, or EQUI 246 operates, and operate and maintain TREA 218 at all times that any emissions are vented to TREA 218. The Permittee shall document periods of non-operation of the control equipment TREA 218 whenever EQUI 136, EQUI 174, EQUI 242, EQUI 243, EQUI 244, EQUI 245, or EQUI 246 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.3	If the Permittee replaces TREA 218, the replacement control must meet or exceed the control efficiency requirements of TREA 218 as well as comply with all other requirements of TREA 218. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.5	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.502.8	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.502.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.502.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.502.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair.

Requirement number	Requirement and citation
	Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.502.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.502.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.502.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.502.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.502.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.502.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to

Requirement number	Requirement and citation
	deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.502.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 219	Step III Conveyor Transfer 005 Feed Baghouse
5.503.1	The Permittee shall vent emissions from EQUI 52 to TREA 219 whenever EQUI 52 operates, and operate and maintain TREA 219 at all times that any emissions are vented to TREA 219. The Permittee shall document periods of non-operation of the control equipment TREA 219 whenever EQUI 52 is operating. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.2	If the Permittee replaces TREA 219, the replacement control must meet or exceed the control efficiency requirements of TREA 219 as well as comply with all other requirements of TREA 219. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.503.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]

Requirement number	Requirement and citation
5.503.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.503.7	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.8	Pressure Drop Monitoring: The Permittee must read and record the pressure drop across the fabric filter, once every 24 hours. [40 CFR 64.3, Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.503.9	Recordkeeping of Pressure Drop: The Permittee shall record the time and date of each pressure drop reading, and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.503.10	The Permittee must operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [40 CFR 64.3, Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.11	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.503.12	Bag Leak Detection System: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording relative particulate matter loadings in the exhaust of the baghouse as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.503.13	The Permittee shall calibrate the pressure gauge at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.503.14	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date

Requirement number	Requirement and citation
	of any corrective action taken for each filter. [40 CFR 64.7(d), Minn. R. 7017.0200]
5.503.15	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.503.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.503.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.503.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.503.19	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.503.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.503.21	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion

Requirement number	Requirement and citation
	or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range, or modify the existing bag leak detection system, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.503.22	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.503.23	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 220	Step III Conveyor Transfer 005 Discharge Baghouse
5.504.1	The Permittee shall vent emissions from EQUI 53 to TREA 220 whenever EQUI 53 operates, and operate and maintain TREA 220 at all times that any emissions are vented to TREA 220. The Permittee shall document periods of non-operation of the control equipment TREA 220 whenever EQUI 53 is operating. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.2	If the Permittee replaces TREA 220, the replacement control must meet or exceed the control efficiency requirements of TREA 220 as well as comply with all other requirements of TREA 220. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.504.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652.

Requirement number	Requirement and citation
	A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.504.4	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.4 percent control efficiency. [Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.7	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.504.9	Recordkeeping of Pressure Drop: The Permittee shall record the time and date of each pressure drop reading, and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.504.10	Pressure Drop Monitoring: The Permittee must read and record the pressure drop across the fabric filter, once every 24 hours. [40 CFR 64.3, Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) and Minn. R. 7007.3000]
5.504.11	The Permittee must operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [40 CFR 64.3, Minn. R. 7017.0200, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.12	Recordkeeping of Bag Leak Detection System. The Permittee shall maintain a continuous hard copy readout or computer disk file of the bag leak detection system output signal and whether or not the bag leak detection alarm was triggered. Periods of time for which the bag leak detection system alarm is triggered are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7017.0200]
5.504.13	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The

Requirement number	Requirement and citation
	monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.504.14	The Permittee shall calibrate the pressure gauge at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.504.15	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions shall determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [40 CFR 64.7(d), Minn. R. 7017.0200]
5.504.16	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.504.17	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.504.18	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.504.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound).

Requirement number	Requirement and citation
	Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7017.2025, Title I Condition: Avoid major modification under 40 CFR 52.21(b)(2) & Minn. R. 7007.3000]
5.504.20	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.504.21	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.504.22	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range, or modify the existing bag leak detection system, the Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.504.23	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.504.24	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 221	Step I Conveyor Transfer 008 to 009 Baghouse
5.505.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and

Requirement number	Requirement and citation
	40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.505.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.3	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.6	The Permittee shall vent emissions from EQUI 326, and EQUI 381 to TREA 221 whenever EQUI 283, EQUI 326, or EQUI 381 operates, and operate and maintain TREA 221 at all times that any emissions are vented to TREA 221. The Permittee shall document periods of non-operation of the control equipment TREA 221 whenever EQUI 326, or EQUI 381 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.7	If the Permittee replaces TREA 221, the replacement control must meet or exceed the control efficiency requirements of TREA 221 as well as comply with all other requirements of TREA 221. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.505.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.505.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.505.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee

Requirement number	Requirement and citation
	must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.505.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.505.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.505.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.505.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.505.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.505.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range.

Requirement number	Requirement and citation
	The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.505.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.505.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 222	Step I Conveyor Transfer 003 to 004 Baghouse
5.506.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.506.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 96.6 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.506.3	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.506.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 94.5 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.506.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.506.6	The Permittee shall vent emissions from EQUI 331, EQUI 332, EQUI 333 and EQUI 385 to TREA 222 whenever EQUI 331, EQUI 332, EQUI 333 and EQUI 385 operates, and operate and maintain TREA 222 at all times that any emissions are vented to TREA 222. The Permittee shall document periods of non-operation of the control equipment TREA 222 whenever EQUI 331, EQUI 332, EQUI 333 and EQUI 385 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.506.7	If the Permittee replaces TREA 222, the replacement control must meet or exceed the control efficiency requirements of TREA 222 as well as comply with all other requirements of TREA 222. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.506.8	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. 5.507.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.507.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.507.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 224	Line 3 Waste Gas Scrubber
5.508.1	The Permittee shall vent emissions from EQUI 146 to TREA 224 whenever EQUI 146 operates, and operate and maintain TREA 224 at all times that any emissions are vented to TREA 224. The Permittee shall document periods of non-operation of the control equipment TREA 224 whenever EQUI 146 is operating. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.2	If the Permittee replaces TREA 224, the replacement control must meet or exceed the control efficiency requirements of TREA 224 as well as comply with all other requirements of TREA 224. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 97.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.508.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 87.7 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.508.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 79.1 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.508.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b); 40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.508.7	Pressure Drop $\geq$ 6.3 and $\leq$ 13 inches of water (Pressure Drop Range Limit) unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.8	Water flow rate $\geq$ 2500 gallons per minute (Water Flow Rate Limit) unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f) as detailed below. [40 CFR 63.9590(b)(1), 40 CFR 64.3, Minn. R. 7011.8030, Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.9	The Permittee shall operate and maintain the scrubber in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.508.10	The Permittee shall maintain and operate a pressure drop monitoring device that continuously indicates and records the pressure drop across the scrubber every 15 minutes. The permittee shall maintain and operate a water flow monitoring device that indicates and records the water flow rate of the scrubber every 15 minutes. The recording device shall also calculate the three-hour rolling average pressure drop and water flow rate. [40 CFR 64.3(b)(ii), Minn. R. 7017.0200]

Requirement number	Requirement and citation
5.508.11	The Permittee shall maintain a continuous hard copy readout or computer disk file of the pressure drop readings and water flow rate readings. Readings outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [40 CFR 64.9(b), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7017.0200]
5.508.12	If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.508.13	If the recorded water flow rate is below the Water Flow Rate Limit, the emissions during that time shall be considered uncontrolled until the water flow rate is above the Water Flow Rate Limit. The period of time for which emissions are considered uncontrolled shall be reported as a deviation. [40 CFR 64.3, Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.0200, Minn. R. 7017.2025]
5.508.14	Pressure Drop: Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [40 CFR 64.7(b), Minn. R. 7017.0200]
5.508.15	Annual Calibration: The Permittee shall calibrate the pressure drop monitor at least once every 12 months and shall maintain a written record of the calibration and any action resulting from the calibration. [40 CFR 64.3, Minn. R. 7017.0200]
5.508.16	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [40 CFR 64.3, Minn. R. 7017.0200]
5.508.17	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [40 CFR 64.3, Minn. R. 7017.0200]
5.508.18	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded pressure drop is outside the required operating range; or - the recorded water flow rate is below the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each control device. [40 CFR 64.7(d), Minn. R. 7017.0200]
5.508.19	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee shall calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time.

Requirement number	Requirement and citation
	The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.20	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Water Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [40 CFR 63.9622(f), Minn. R. 7017.2025, Title I Condition: 40 CFR 52.21(j)(BACT) & Minn. R. 7007.3000]
5.508.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.508.22	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.508.23	Documentation of Need for Improved Monitoring: If the Permittee fails to achieve compliance with an emission limitation or standard for which the monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing pressure drop range or minimum water flow rate, the

Requirement number	Requirement and citation
	Permittee shall promptly notify the MPCA and, if necessary, submit a permit amendment application to address the necessary monitoring change. [40 CFR 64.7(e), Minn. R. 7017.0200]
5.508.24	As required by 40 CFR 64.9(a)(2), for the Semi-Annual Deviations Report required by this permit and/or the Notification of Deviations Endangering Human Health and the Environment required by this permit, as applicable, the Permittee shall include the following related to the monitoring identified as required by 40 CFR pt. 64: 1) Summary information on the number, duration, and cause of excursions or exceedances, as applicable, and the corrective action taken; and 2) Summary information on the number, duration, and cause for monitor downtime incidents. [40 CFR 64.9(a)(2), Minn. R. 7017.0200]
5.508.25	The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, and other supporting information required to be maintained. The Permittee may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [40 CFR 64.9(b), Minn. R. 7017.0200]
TREA 225	L6 Steam Collection Venturi Scrubber
5.509.1	The Permittee shall vent emissions from EQUI 119 and EQUI 120 to TREA 225 whenever EQUI 119 or EQUI 120 operates, and operate and maintain TREA 225 at all times that any emissions are vented to TREA 225. The Permittee shall document periods of non-operation of the control equipment TREA 225 whenever EQUI 119 or EQUI 120 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.2	If the Permittee replaces TREA 225, the replacement control must meet or exceed the control efficiency requirements of TREA 225 as well as comply with all other requirements of TREA 225. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 95.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 94.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 90.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.6	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9590(c); 40 CFR 63.9590(b)(1); 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (3); 40 CFR 63.9610(a); 40 CFR 63.9622(f); 40 CFR 63.9631(b);

Requirement number	Requirement and citation
	40 CFR 63.9632(b)-(e); 40 CFR 63.9633; 40 CFR 63.9634(a), (e), & (j); 40 CFR 63.9636(a)(1) & (3); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.509.7	Pressure Drop $\geq$ 5.8 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.509.8	Water flow rate $\geq$ 100 gallons per minute daily average (Flow Rate Limit), unless a new limit is set pursuant to Minn. R. 7017.2025, subp. 3, and 40 CFR 63.9622(f), as detailed below. [40 CFR 63.9590(b)(1), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.509.9	The Permittee shall record the water flow rate at least once each operating day. If the recorded flow rate is below the required limit, the emissions during that time shall be considered uncontrolled until the flow rate is once again above the required limit. The period of time for which the flow rate is considered below the limit shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.10	The Permittee shall record the pressure drop at least once each operating day. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation, as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.509.11	Recordkeeping of Pressure Drop and Water Flow Rate: The Permittee shall record the time and date of each pressure drop reading and water flow rate reading, and whether or not the recorded values were within the ranges specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.509.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the recorded flow rate is below the required rate; - the recorded pressure drop is outside the required operating range; or - the scrubber or any of its components are found during the inspections to need repair. Corrective actions shall return the pressure drop and/or water flow rate to within the permitted range(s), and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the Operation and Maintenance (O & M) Plan for the scrubber. The Permittee shall keep a record of the type and date of any corrective action taken for each scrubber. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.509.13	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the wet

Requirement number	Requirement and citation
	scrubber. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.509.14	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the wet scrubber not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.509.15	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop and water flow rate as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored scrubber is in operation. [Minn. R. 7007.0800, subp. 4]
5.509.16	The Permittee shall calibrate or replace the pressure drop and flow rate monitors at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.509.17	The Permittee shall operate and maintain the scrubber in accordance with the O & M Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.509.18	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Pressure Drop Range Limit shall be reset as follows: - Using the CPMS, measure and record the pressure drop every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average pressure drop for each individual test run. - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is below the minimum value of the established range, the Pressure Drop Limit shall be reset as the lowest 1-hour average pressure drop corresponding to any of the three test runs. Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) and (B), Minn. R. 7017.2025]
5.509.19	Protocol for Resetting the Water Flow Rate Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Water Flow Rate Limit is to be reset, the reset shall be based on the water flow rate values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The established Flow Rate Limit shall be reset as follows: - Using the CPMS, measure and record the scrubber water flow rate every 15 minutes during each run of the particulate matter performance test. Downtime of 15 minutes or more is not to be included as operating time. - Calculate and record the average scrubber water flow rate for each individual test run.

Requirement number	Requirement and citation
	- if the 3-hour average water flow rate recorded during the test is above the established limit, it shall not be reset and the established value remains the Flow Rate Limit; or - if the 3-hour average water flow rate recorded during the test is lower than the current limit, the Flow Rate Limit shall be reset as the lowest 1-hour average water flow rate corresponding to any of the three test runs. The new Flow Rate Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.509.20	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.509.21	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit and Flow Rate Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
TREA 226	Secondary Crusher L2 Cartridge Filter
5.510.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.510.2	The Permittee shall vent emissions from EQUI 328 to TREA 226 whenever EQUI 328 operates, and operate and maintain TREA 226 at all times that any emissions are vented to TREA 226. The Permittee shall document periods of non-operation of the control equipment TREA 226 whenever EQUI 328 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.3	If the Permittee replaces TREA 226, the replacement control must meet or exceed the control efficiency requirements of TREA 226 as well as comply with all other requirements of TREA 226. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit

Requirement number	Requirement and citation
	amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.7	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.510.8	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.510.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.510.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.510.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.510.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment

Requirement number	Requirement and citation
	for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.510.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.510.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.510.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.510.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.510.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.510.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.512.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range.

Requirement number	Requirement and citation
	The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.512.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.512.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 229	Conveyor Transfer 009-020 Cartridge Filter
5.513.1	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.513.2	The Permittee shall vent emissions from EQUI 313, EQUI 314, EQUI 393, and EQUI 394 to TREA 229 whenever EQUI 313, EQUI 314, EQUI 393, or EQUI 394 operates, and operate and maintain TREA 229 at all times that any emissions are vented to TREA 229. The Permittee shall document periods of non-operation of the control equipment TREA 229 whenever EQUI 313, EQUI 314, EQUI 393, or EQUI 394 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.3	If the Permittee replaces TREA 229, the replacement control must meet or exceed the control efficiency requirements of TREA 229 as well as comply with all other requirements of TREA 229. Prior

Requirement number	Requirement and citation
	to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.6	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.7	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.513.8	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.513.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.513.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.513.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

Requirement number	Requirement and citation
5.513.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.513.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.513.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.513.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.513.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.513.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.513.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a

5.515.6	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.515.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.515.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.515.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]

Requirement number	Requirement and citation
5.515.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.515.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.515.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.515.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.515.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.515.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.515.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum

Requirement number	Requirement and citation
	value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.515.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.515.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 232	Step II Coarse Crusher Pan Feeder Cartridge Filter
5.516.1	The Permittee shall vent emissions from EQUI 208 and EQUI 374 to TREA 232 whenever EQUI 208 or EQUI 374 operates, and operate and maintain TREA 232 at all times that any emissions are vented to TREA 232. The Permittee shall document periods of non-operation of the control equipment TREA 232 whenever EQUI 208 or EQUI 374 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.2	If the Permittee replaces TREA 232, the replacement control must meet or exceed the control efficiency requirements of TREA 232 as well as comply with all other requirements of TREA 232. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652.

Requirement number	Requirement and citation
	A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.516.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.5	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.516.6	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.516.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.516.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.516.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.516.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.516.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.516.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.516.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.516.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. 	preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 233	Conveyor Transfer 005-006 Cartridge Filter
5.517.1	The Permittee shall vent emissions from EQUI 318 and EQUI 377 to TREA 233 whenever EQUI 318 or EQUI 377 operates, and operate and maintain TREA 233 at all times that any emissions are vented to TREA 233. The Permittee shall document periods of non-operation of the control equipment TREA 233 whenever EQUI 318 or EQUI 377 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.2	If the Permittee replaces TREA 233, the replacement control must meet or exceed the control efficiency requirements of TREA 233 as well as comply with all other requirements of TREA 233. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.517.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.5	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of

Requirement number	Requirement and citation
	time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.517.6	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.517.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.517.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.517.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.517.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.517.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.517.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. 5.517.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the

Requirement number	Requirement and citation
	inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.517.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.517.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.517.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 234	Conveyor Transfer 001 to 070 Cartridge Filter
5.518.1	The Permittee is authorized to construct and operate TREA 234 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.518.2	After the startup and operation of TREA 234, the Permittee shall vent emissions from EQUI 392 to TREA 234 whenever EQUI ID 392 operates, and operate and maintain TREA 234 at all times that any emissions are vented to TREA 234. The Permittee shall document periods of non-operation of the control equipment TREA 234 whenever EQUI 392 is operating. Note: TREA 234 will replace TREA 54. Prior to the startup and operation of TREA 234, the Permittee shall follow the requirements for TREA 54. After the startup and operation of TREA 234, TREA 54 shall be shut down, and the Permittee shall follow requirements for TREA 234. [Minn. R. 7007.0800, subp.

Requirement number	Requirement and citation
	14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.518.3	If the Permittee replaces TREA 234, the replacement control must meet or exceed the control efficiency requirements of TREA 234 as well as comply with all other requirements of TREA 234. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.518.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.518.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.518.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.518.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subp. 2(A) & (B)]
5.518.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.518.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.518.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.518.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.518.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.518.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.518.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.518.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.518.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.518.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was

Requirement number	Requirement and citation
	demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.518.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.518.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 235	Conveyor Transfer 005-006 Cartridge Filter
5.519.1	The Permittee shall vent emissions from EQUI 51 to TREA 235 whenever EQUI 51 operates, and operate and maintain TREA 235 at all times that any emissions are vented to TREA 235. The Permittee shall document periods of non-operation of the control equipment TREA 235 whenever EQUI 51 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.2	If the Permittee replaces TREA 235, the replacement control must meet or exceed the control efficiency requirements of TREA 235 as well as comply with all other requirements of TREA 235. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required);

Requirement number	Requirement and citation
	40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.519.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.5	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.519.6	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.7	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.519.9	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.519.10	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.519.11	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.519.12	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.519.13	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.519.14	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.519.15	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.519.16	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data

Requirement number	Requirement and citation
	acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.519.17	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.519.18	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 236	Surge Pile/Reclaim 011-01 Cartridge Filter
5.520.1	The Permittee is authorized to construct and operate TREA 236 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.520.2	After the startup and operation of TREA 236, the Permittee shall vent emissions from EQUI 325 to TREA 236 whenever EQUI 325 operates, and operate and maintain TREA 236 at all times that any emissions are vented to TREA 236. The Permittee shall document periods of non-operation of the control equipment TREA 236 whenever EQUI 325 is operating. Note: TREA 236 will replace TREA 127. Prior to the startup and operation of TREA 236, the Permittee shall follow the requirements for TREA 127. After the startup and operation of TREA 236, TREA 127 shall be shut down, and the Permittee shall follow requirements for TREA 236. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.3	If the Permittee replaces TREA 236, the replacement control must meet or exceed the control efficiency requirements of TREA 236 as well as comply with all other requirements of TREA 236. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637;

Requirement number	Requirement and citation
	40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.520.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.520.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.520.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.520.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.520.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs

Requirement number	Requirement and citation
	identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.520.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.520.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.520.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.520.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.520.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.520.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]

Requirement number	Requirement and citation
5.520.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 237	Conveyor Transfer 008-009 Cartridge Filter
5.521.1	The Permittee is authorized to construct and operate TREA 237 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.521.2	After the startup and operation of TREA 237, the Permittee shall vent emissions from EQUI 6, EQUI 7, EQUI 342 and EQUI 343 to TREA 237 whenever EQUI 6, EQUI 7, EQUI 342 or EQUI 343 operates, and operate and maintain TREA 237 at all times that any emissions are vented to TREA 237. The Permittee shall document periods of non-operation of the control equipment TREA 237 whenever EQUI 6, EQUI 7, EQUI 342 or EQUI 343 is operating. Note: TREA 237 will replace TREA 53. Prior to the startup and operation of TREA 237, the Permittee shall follow the requirements for TREA 53. After the startup and operation of TREA 237, TREA 53 shall be shut down, and the Permittee shall follow requirements for TREA 237. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.3	If the Permittee replaces TREA 237, the replacement control must meet or exceed the control efficiency requirements of TREA 237 as well as comply with all other requirements of TREA 237. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J.

Requirement number	Requirement and citation
	If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.521.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.521.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.521.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.521.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.521.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.521.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment

Requirement number	Requirement and citation
	must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.521.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.521.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.521.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.521.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.521.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.521.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 238	Secondary Crusher L6 Cartridge Filter

Requirement number	Requirement and citation
5.522.1	The Permittee is authorized to construct and operate TREA 238 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.522.2	After the startup and operation of TREA 238, the Permittee shall vent emissions from EQUI 339 to TREA 238 whenever EQUI 339 operates, and operate and maintain TREA 238 at all times that any emissions are vented to TREA 238. The Permittee shall document periods of non-operation of the control equipment TREA 238 whenever EQUI 339 is operating. Note: TREA 238 will replace TREA 48. Prior to the startup and operation of TREA 238, the Permittee shall follow the requirements for TREA 48. After the startup and operation of TREA 238, TREA 48 shall be shut down, and the Permittee shall follow requirements for TREA 238. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.522.3	If the Permittee replaces TREA 238, the replacement control must meet or exceed the control efficiency requirements of TREA 238 as well as comply with all other requirements of TREA 238. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.522.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.522.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.522.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.522.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.522.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.522.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.522.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.522.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.522.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.522.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.522.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.522.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric

Requirement number	Requirement and citation
	filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.522.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.522.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.522.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.522.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 239	Secondary Crusher L8 Cartridge Filter
5.523.1	The Permittee is authorized to construct and operate TREA 239 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.523.2	After the startup and operation of TREA 239, the Permittee shall vent emissions from EQUI 340 to TREA 239 whenever EQUI 340 operates, and operate and maintain TREA 239 at all times that any

Requirement number	Requirement and citation
	emissions are vented to TREA 239. The Permittee shall document periods of non-operation of the control equipment TREA 239 whenever EQUI 340 is operating. Note: TREA 239 will replace TREA 49. Prior to the startup and operation of TREA 239, the Permittee shall follow the requirements for TREA 49. After the startup and operation of TREA 239, TREA 49 shall be shut down, and the Permittee shall follow requirements for TREA 239. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.3	If the Permittee replaces TREA 239, the replacement control must meet or exceed the control efficiency requirements of TREA 239 as well as comply with all other requirements of TREA 239. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.523.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The

Requirement number	Requirement and citation
	Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.523.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.523.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.523.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.523.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.523.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.523.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.523.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.523.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be

Requirement number	Requirement and citation
	separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.523.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.523.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.523.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 240	Secondary Crusher L7 Cartridge Filter
5.524.1	The Permittee is authorized to construct and operate TREA 240 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.524.2	After the startup and operation of TREA 240, the Permittee shall vent emissions from EQUI 390 to TREA 240 whenever EQUI 390 operates, and operate and maintain TREA 240 at all times that any emissions are vented to TREA 240. The Permittee shall document periods of non-operation of the control equipment TREA 240 whenever EQUI 390 is operating. Note: TREA 240 will replace TREA 50. Prior to the startup and operation of TREA 240, the Permittee shall follow the requirements for TREA 50. After the startup and operation of TREA 240, TREA 50 shall be shut down, and the Permittee shall follow requirements for TREA 240. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.524.3	If the Permittee replaces TREA 240, the replacement control must meet or exceed the control efficiency requirements of TREA 240 as well as comply with all other requirements of TREA 240. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.524.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.524.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter $\geq$ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.524.6	Pressure Drop $\geq$ 0.5 and $\leq$ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.524.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.524.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.524.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.524.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.524.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.524.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.524.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.524.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.524.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.524.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.524.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.524.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.524.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 241	Secondary Crusher L9 Cartridge Filter
5.525.1	The Permittee is authorized to construct and operate TREA 241 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.525.2	After the startup and operation of TREA 241, the Permittee shall vent emissions from EQUI 341 to TREA 241 whenever EQUI 341 operates, and operate and maintain TREA 241 at all times that any emissions are vented to TREA 241. The Permittee shall document periods of non-operation of the control equipment TREA 241 whenever EQUI 341 is operating. Note: TREA 241 will replace TREA 51. Prior to the startup and operation of TREA 241, the Permittee shall follow the requirements for TREA 51. After the startup and operation of TREA 241, TREA 51 shall be shut down, and the Permittee shall follow requirements for TREA 241. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.3	If the Permittee replaces TREA 241, the replacement control must meet or exceed the control efficiency requirements of TREA 241 as well as comply with all other requirements of TREA 241. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to

Requirement number	Requirement and citation
	the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.525.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.525.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.525.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and

Requirement number	Requirement and citation
	Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.525.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.525.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.525.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.525.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.525.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.525.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.525.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or

Requirement number	Requirement and citation
	- if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.525.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.525.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 242	Secondary Crusher L10 Cartridge Filter
5.526.1	The Permittee is authorized to construct and operate TREA 242 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.526.2	After the startup and operation of TREA 242, the Permittee shall vent emissions from EQUI 5 to TREA 242 whenever EQUI 5 operates, and operate and maintain TREA 242 at all times that any emissions are vented to TREA 242. The Permittee shall document periods of non-operation of the control equipment TREA 242 whenever EQUI 5 is operating. Note: TREA 242 will replace TREA 52. Prior to the startup and operation of TREA 242, the Permittee shall follow the requirements for TREA 52. After the startup and operation of TREA 242, TREA 52 shall be shut down, and the Permittee shall follow requirements for 242. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.3	If the Permittee replaces TREA 242, the replacement control must meet or exceed the control efficiency requirements of TREA 242 as well as comply with all other requirements of TREA 242. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a);

Requirement number	Requirement and citation
	40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.526.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.526.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.526.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.526.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.526.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.526.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.526.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.526.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.526.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.526.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data

Requirement number	Requirement and citation
	acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.526.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.526.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 243	Step III Coarse Crusher Pan Feeders Cartridge Filter
5.527.1	The Permittee is authorized to construct and operate TREA 243 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.527.2	After the startup and operation of TREA 243, the Permittee shall vent emissions from EQUI 281 and EQUI 375 to TREA 243 whenever EQUI 281 or EQUI 375 operates, and operate and maintain TREA 243 at all times that any emissions are vented to TREA 243. The Permittee shall document periods of non-operation of the control equipment TREA 243 whenever EQUI 281 or EQUI 375 is operating. Note: TREA 243 will replace TREA 120. Prior to the startup and operation of TREA 243, the Permittee shall follow the requirements for TREA 120. After the startup and operation of TREA 243, TREA 120 shall be shut down, and the Permittee shall follow requirements for 243. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.3	If the Permittee replaces TREA 243, the replacement control must meet or exceed the control efficiency requirements of TREA 243 as well as comply with all other requirements of TREA 243. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637;

Requirement number	Requirement and citation
	40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.527.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.527.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.527.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.527.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.527.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs

Requirement number	Requirement and citation
	identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.527.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.527.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.527.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.527.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.527.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.527.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]

Requirement number	Requirement and citation
5.527.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 244	Conveyor Transfer 011-02/03 Cartridge Filter
5.528.1	The Permittee is authorized to construct and operate TREA 244 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.528.2	After the startup and operation of TREA 244, the Permittee shall vent emissions from EQUI 324 to TREA 244 whenever EQUI 324 operates, and operate and maintain TREA 244 at all times that any emissions are vented to TREA 244. The Permittee shall document periods of non-operation of the control equipment TREA 244 whenever EQUI 324 is operating. Note: TREA 244 will replace TREA 126. Prior to the startup and operation of TREA 244, the Permittee shall follow the requirements for TREA 126. After the startup and operation of TREA 244, TREA 126 shall be shut down, and the Permittee shall follow requirements for TREA 244. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.3	If the Permittee replaces TREA 244, the replacement control must meet or exceed the control efficiency requirements of TREA 244 as well as comply with all other requirements of TREA 244. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if

Requirement number	Requirement and citation
	there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.528.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.528.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.528.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.528.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.528.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.528.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation.

Requirement number	Requirement and citation
	[Minn. R. 7007.0800, subp. 4]
5.528.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.528.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.528.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.528.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.528.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.528.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 245	Secondary Crusher L11 Cartridge Filter

Requirement number	Requirement and citation
5.529.1	The Permittee is authorized to construct and operate TREA 245 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.529.2	After the startup and operation of TREA 245, the Permittee shall vent emissions from EQUI 9 to TREA 245 whenever EQUI 9 operates, and operate and maintain TREA 245 at all times that any emissions are vented to TREA 245. The Permittee shall document periods of non-operation of the control equipment TREA 245 whenever EQUI 9 is operating. Note: TREA 245 will replace TREA 57. Prior to the startup and operation of TREA 245, the Permittee shall follow the requirements for TREA 57. After the startup and operation of TREA 245, TREA 57 shall be shut down, and the Permittee shall follow requirements for 245. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.529.3	If the Permittee replaces TREA 245, the replacement control must meet or exceed the control efficiency requirements of TREA 245 as well as comply with all other requirements of TREA 245. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.529.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.529.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R.

Requirement number	Requirement and citation
	7007.0800, subp. 2(A) & (B)]
5.529.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.529.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.529.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron ≥ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.529.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron ≥ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.529.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.529.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.529.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.529.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.529.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.529.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric

Requirement number	Requirement and citation
	filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.529.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.529.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.529.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.529.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 246	Secondary Crusher L12 Cartridge Filter
5.530.1	The Permittee is authorized to construct and operate TREA 246 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.530.2	After the startup and operation of TREA 246, the Permittee shall vent emissions from EQUI 285 to TREA 246 whenever EQUI 285 operates, and operate and maintain TREA 246 at all times that any

Requirement number	Requirement and citation
	emissions are vented to TREA 246. The Permittee shall document periods of non-operation of the control equipment TREA 246 whenever EQUI 285 is operating. Note: TREA 246 will replace TREA 58. Prior to the startup and operation of TREA 246, the Permittee shall follow the requirements for TREA 58. After the startup and operation of TREA 246, TREA 58 shall be shut down, and the Permittee shall follow requirements for TREA 246. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.3	If the Permittee replaces TREA 246, the replacement control must meet or exceed the control efficiency requirements of TREA 246 as well as comply with all other requirements of TREA 246. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.530.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The

Requirement number	Requirement and citation
	Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.530.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.530.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.530.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.530.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.530.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.530.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.530.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.530.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be

Requirement number	Requirement and citation
	separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.530.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.530.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.530.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 247	Secondary Crusher L13 Cartridge Filter
5.531.1	The Permittee is authorized to construct and operate TREA 247 per the specifications listed in Appendix L. The authorization to construct expires 5 years after issuance of Air Emissions Permit No. 13700005-101. The control shall meet all applicable permit requirements. [Minn. R. 7007.0800, subp. 2(A)]
5.531.2	After the startup and operation of TREA 247, the Permittee shall vent emissions from EQUI 286 to TREA 247 whenever EQUI 286 operates, and operate and maintain TREA 247 at all times that any emissions are vented to TREA 247. The Permittee shall document periods of non-operation of the control equipment TREA 247 whenever EQUI 286 is operating. Note: TREA 247 will replace TREA 59. Prior to the startup and operation of TREA 247, the Permittee shall follow the requirements for TREA 59. After the startup and operation of TREA 247, TREA 59 shall be shut down, and the Permittee shall follow requirements for TREA 247. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.531.3	If the Permittee replaces TREA 247, the replacement control must meet or exceed the control efficiency requirements of TREA 247 as well as comply with all other requirements of TREA 247. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.531.4	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required) 40 CFR 63.9631(a)(1)-(6) & (8); 40 CFR 63.9632(a); 40 CFR 63.9633; 40 CFR 63.9634(a) & (d); 40 CFR 63.9636(a)(1) & (2); 40 CFR 63.9636(b); 40 CFR 63.9637; 40 CFR 63.9642(a) & (c); 40 CFR 63.9643; and 40 CFR 63.9652. A copy of 40 CFR pt. 63, subp. RRRRR is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than three years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 63, subp. RRRRR, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.8030]
5.531.5	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter ≥ 99.4 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.531.6	Pressure Drop ≥ 0.5 and ≤ 8.0 inches of water (Pressure Drop Range Limit), unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3, as detailed below. If the recorded pressure drop is outside the required range, the emissions during that time shall be considered uncontrolled until the pressure drop is once again within the required range. The period of time for which the pressure drop is considered out of range shall be reported as a deviation. The Permittee shall record the pressure drop at least once every 24 hours when in operation. [40 CFR 63.9631(a)(1), Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7011.8030, Minn. R. 7017.2025]
5.531.7	The Permittee shall operate and maintain a bag leak detector at all times that the fabric filter and emission unit controlled by the fabric filter is in operation. Operation and maintenance of the bag leak detector shall be included in the O & M Plan. [Minn. R. 7007.0800, subp. (14), Minn. R. 7007.0800, subp. 2(A) & (B)]

Requirement number	Requirement and citation
5.531.8	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron $\geq$ 99.3 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.531.9	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron $\geq$ 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.531.10	The Permittee shall operate and maintain the fabric filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.531.11	Pressure Drop Daily Inspections and Recordkeeping: At least once each operating day, the Permittee must read and record the pressure drop across the cartridge filter. The Permittee must record the time and date of each pressure drop reading and whether or not the observed pressure drop was within the range specified in this permit. Recorded values outside the range specified in this permit are considered Deviations as defined by Minn. R. 7007.0100, subp. 8a. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-5]
5.531.12	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - the alarm for the bag leak detector is triggered; or - the recorded pressure drop is outside the required operating range; or - the fabric filter or any of its components are found during the inspections to need repair. Corrective actions must determine and correct the cause of the bag leak detector alarm, return the pressure drop to within the permitted range, and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the fabric filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.531.13	Monitoring Equipment: The Permittee shall install and maintain the necessary monitoring equipment for measuring and recording pressure drop as required by this permit. The monitoring equipment must be installed, in use, and properly maintained when the monitored fabric filter is in operation. [Minn. R. 7007.0800, subp. 4]
5.531.14	The Permittee shall calibrate or replace the pressure drop monitor at least once every 12 months and shall maintain a written record of any action resulting from the calibration. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.531.15	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee must inspect the external components of the fabric filter. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.531.16	Semiannual inspections: At least once semiannually, or more frequently if required by the manufacturer's specifications, the Permittee must inspect the internal components of the fabric filter not covered by quarterly external inspections. The Permittee must maintain a written record of the inspection and any corrective actions taken resulting from the inspection. Each inspection must be separated by at least 4 months but no more than 8 months. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.531.17	Protocol for Resetting the Pressure Drop Range Limit: The Permittee shall conduct performance testing to measure the PM emission rate as required elsewhere in this permit. If the established Pressure Drop Range Limit is to be reset, the reset shall be based on the pressure drop values recorded during the most recent MPCA-approved performance test where compliance was demonstrated.

Requirement number	Requirement and citation
	During the performance test, the Permittee must continuously monitor the pressure drop. The Permittee must calculate the average pressure drop based on the average exhibited over all three compliant test runs. Downtime of 15 minutes or more is not to be included as operating time. The established Pressure Drop Range Limit shall be reset as follows: - if the 3-hour average pressure drop recorded during the test is within the established range, it shall not be reset and the established values remain the Pressure Drop Range Limit; or - if the 3-hour average pressure drop is above the maximum value of the established range, the new maximum value shall be reset as the average pressure drop from the test plus 10%. The minimum value shall be increased by the same amount to maintain the pressure drop range. The pressure drop range is equal to the maximum value (upper bound) minus the minimum value (lower bound). Ongoing compliance with the Pressure Drop Range Limit will be determined using the same data acquisition and reduction as was used during the performance test. The new Pressure Drop Range Limit shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7017.2025]
5.531.18	The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Pressure Drop Range Limit required by this permit. [Minn. R. 7007.1500, subp. 1]
5.531.19	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
TREA 248	Secondary Crusher L14 Cartridge Filter
5.532.1	The Permittee shall vent emissions from EQUI 10 to TREA 248 whenever EQUI 10 operates, and operate and maintain TREA 248 at all times that any emissions are vented to TREA 248. The Permittee shall document periods of non-operation of the control equipment TREA 248 whenever EQUI 10 is operating. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.532.2	If the Permittee replaces TREA 248, the replacement control must meet or exceed the control efficiency requirements of TREA 248 as well as comply with all other requirements of TREA 248. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A) & (B)]
5.532.3	The Permittee must comply with all applicable requirements of 40 CFR pt. 63, subp. RRRRR, as follows: 40 CFR 63.9600(a) & (b); 40 CFR 63.9600(b)(1) & (2); 40 CFR 63.9610(a); 40 CFR 63.9631(a) (bag leak detection system required); 40 CFR 63.9631(a)(1)-(6) & (8);

Requirement number	Requirement and citation
