

Julie Jones

I understand that the agency plans to remove the contaminated soil and then replace it with clean soil. I live very nearby the area and am concerned what will happen when they disturb it and what will be released into the air and land around the area.

Also, if they do plan to place land use restrictions on the property to protect human health and the environment, then how could they allow a housing project to be built adjacent to that contaminated land? The city has already started construction on the new road that runs the length of our property. This has disturbed wetlands and the wildlife and birds that called it home. I believe that there needs to be a lot more consideration before any more actions are taken.
