

Mark Jones

Hello my name is Mark Jones. I have lived in the neighborhood where this hazardous waste site is. As kids we used to go over by it. There was no fencing, hazardous signs nothing. I have seen animals die there we used to throw big rocks onto the tarry sludge they would sink. When it got cold in the fall, if any water on it would freeze over and we would skate on it. This is a nasty site. I am wondering what effect to people around this site when you start removing this hazardous material, and the wind blows fumes. I am sure after reading the report the cyanide, benzene could effect people. I think the whole back corner should be fenced, covered and nothing ever built on the site. Furthermore the city of Hibbing and the Hibbing housing are planning to build apt buildings adjacent to this property, I don't think that should be allowed, any benzene is too much and please think of the safety of the people that will be living there and potential for law suits. Also I don't think 2 million will cover the cost for this project.
