

Kay Smart

Mr. Roper has intentionally misrepresented this project from day 1. He lied to the person he purchased the property from, about his intended use for the property. He ignored the restrictions stated on the Deed to the property he purchased, stating that the property's use cannot pose a nuisance to neighbors. He has NO regard for his neighbors in the area and is only interested in his personal gain from the planned Operations. He has presented inaccurate information about the effects an operating Concrete Batch Plant will have on the environment in the surrounding area. His legal team has presented environmental impact information from a location that is nothing like the location of the intended Batch Plant, hoping to gain EIB approval.

Mr. Roper has an operating facility just a few miles from the intended new location, and an operating Batch Plant in Carrizozo, NM. Talk to the residents in Carrizozo and they will tell you of the issues with concrete dust inside their homes, in the air, and on everything they own since the Plant began operating. Mr. Roper is NOT being the responsible business owner he claims to be in Carrizozo and will NOT adhere to the environmental standards he claims he will at the new site. He cannot be trusted to protect the environment in the future, because he has shown complete disregard for the environment in the past. Please do NOT approve his request to place a Concrete Batch Plant in Alto, NM.

thank you,
