

bobby smart

The heading on the page says: Environmental Improvement Board. This is the organization that Mr. Roper has applied to for reconsideration of his proposal to build a Concrete Batch Plant in Alto, NM. I think the name of the Board should say it all. Please tell me how a Concrete Batch Plant could possibly help improve the Environmental Health of any place, let alone a beautiful place like Alto, NM. We currently have clean, clear air most days, and beautiful blue skies most days. Will an operating batch plant improve on these conditions?! Of course not! The Board has said as much already by denying the request the first time around.

I implore you to stick by your first decision to REJECT the proposal to place a batch plant here. It is in no way going to improve the environment in our area. It will do the exact opposite.

thank you,

bsmart
