

# Helen Owen

. The impact that an increase in fugitive dust emissions would have on your health, particularly if you have respiratory issues or other pre-existing conditions

.The impact increased fugitive dust emissions would have on your pets, horses, and all wildlife (deer, elk, turkeys, hummingbirds, etc.)

.The impact that increased fugitive dust will have on your property specifically the natural landscape, the abundant ingenious wildlife, or garden, orchard or cultivated landscaping you may have in your property.

.The inappropriateness of having such a plant in a residential and recreational area, largely populated by retirement aged residents, and in proximity to several golf courses, TV parks, a children's church camp, a nursery, and national recreational lands such as White Mountain wilderness Area, Lincoln National Forest, and Fort Stanton Snowy River Cave National Conservation Area

.The fallacy of assuming meteorological and topographical conditions from the Holloman AFB area accurately represent the winds, overall weather and terrain of the Alto area.

.The increased noise level and activity would have a negative impact on wild life.
