

Louis Goode

Why is The NM-EIB entertaining an appeal for an Air Quality Permit Application (RCI's) that was previously denied at the highest level by the Secretary of the Environment for NM?

While the NMED AQB was/is only concerned about the air pollution associated with the site of the future CBP, the EIB is concerned with 14 different environmental issues or concerns, to include, water pollution, noise and light pollution and if the proposed facility creates a public nuisance as well, right? If not, please explain...

Where are the biographies and financial disclosure records of the 7 NM-EIB members located for review and examination please?

How many additional appeal requests can Roper file, and with what agencies, should the NM-EIB reject his already denied request for an AQ Permit?

Is the EIB or its individual members subject to lawsuits filed by the more than 200 residents residing within 1/2 mile mile of the proposed CBP, should they grant Roper's appeal to build and operate his Alto CBP?

What financial assistance can the NM-EIB provide to ensure the preservation of the pristine air quality and water purity, low light and little noise pollution, currently enjoyed by nearly 3000 NM residents and taxpayers in Alto, NM?

Finally, will you please define the concept of "Environmental Improvement", the responsibility that you are charged to manage for the Governor of NM?

Please answer these questions as you kick off the public hearing at 0900 on 8 October 2022.

Also know that your attention in this matter is greatly appreciated.

Respectfully,

Lou Goode
