

Stirling Spencer

Being a retired Professional Engineer and having been involved with permits both local and governmental I find it very hard to understand why this permit has been denied after passing review by the technical and legal fact finding arm of the Environmental agency that developed the guidelines for assessing the issues in order to make a scientific nonbias ruling from those recommendations.

Having been a past Lincoln county commissioner I also find it is not governments role to stifle and denied private property and business rights of entities wishing to do business in the county which benefits the general public and tax roles that helps to develop a growing community

Having been a past Judge, I also know that rulings are to be made on facts not bias or personal feelings.

I therefore as the hearing commission to approve the Roper application based on the technical and legal findings and as long as the inity meets the environmental standards allow this business to help Lincoln county prosper and not stifle business here.

I thank the review board for this consideration in possible support of the issue
