

Clayton Murphy

I am in opposition to the construction and operation of this concrete plant. For one, I am opposed to the increase in heavy truck traffic that would directly impact the area of my residence. The 2nd reason is the likely noise associated with this plant in this beautiful mountain environment. Pollution of air quality is another concern I have as this one of the wonderful benefits of living in the mountains. Perhaps the biggest concern I have is the water usage required by this plant. As I have 2 water wells on my property, the potential for loss of water due the lowering of the water table in this area could be catastrophic to the value of my home and property.
