

Ron Michelena

Secretary of the Environment, I would like to voice my opposition to the proposed batch plant construction in Alto. I am a survivor of Covid 19-pneumonia, however I do require oxygen to breath. The dust created, is a kind of air pollution called particulate matter that can penetrate deep into the lungs, it is just one part of the problem that concrete batch plants present. I'm sure the commission has all the studies on this matter. Secondly, The fallacy of assuming meteorological and topographical conditions from the Holloman AFB area accurately represent the winds, overall weather and terrain of the Alto area is simply erroneous. There is a myriad of other problems that I will not cover. I strongly ask you to deny the permit. Thank you for your time
Ron Michelena D.D.S.
