

## Debra Hancock

I think everything in the state costs too much already without forcing us to buy even more expensive EV vehicles. This is a stupid idea that will force people to go to other states to purchase vehicles that they want to own. This state does not have the electrical infrastructure to charge 4 EV's let alone hundreds. Are you planning on putting in 50 or 60 rest areas with charging stations and food & restrooms for people to be able to travel across the state without running out of power??? its 90 miles or more between towns outside of Santa FE, in case you have never gone down to carlsbad, to Chack out the caverns. I am NOT in favor of the state or Federal government telling me what I HAVE to buy. I DO NOT choose EV's and until you can provide me with FREE energy I never will!!
