

Darien Brown

I am appalled by this proposal: IT IS TOTALLY UNDOABLE!!!The technology is not here yet to economically build vehicles run only on electricity to do the jobs necessary for citizens in this rural state to conduct business and live in this state!

I love electricity, use it every time I turn on a light or use my computer; I even have my irrigation system on electricity! But there is no way to haul cattle or hay with electric vehicles; even trains carry huge diesel generators to provide power for the electric motors that drive the trains. When there is economically comprable electric driven transportation we will use it!!! until then; NO!!!
