

Texas Hydrogen Association

On behalf of the Texas Hydrogen Association, I extend our support for the Advanced Clean Cars and Advanced Clean Trucks Rules proposed for New Mexico. We commend New Mexico's pioneering efforts towards zero-emission and carbon-negative initiatives that not only advance environmental goals but also stimulate economic growth in clean energy production and utilization. Our mutual focus includes the evolution of carbon-negative hydrogen production and the imminent integration of fuel-cell electric buses in public and educational transit systems. The proposed regulations can potentially catalyze increased private investments in hydrogen production facilities, assembly plants for large-scale fuel-cell electric buses, servicing infrastructures, hydrogen fueling stations, and comprehensive maintenance services for these buses. We consistently engage with industry stalwarts in New Mexico and, as a neighboring state, pledge our unwavering support in your journey towards a cleaner, carbon-free energy future.
