

Lisa Aguilar

I write to urge you to prioritize adopting the Advanced Clean Cars² and Advanced Clean Trucks program that will increase the number of zero emission vehicles on our New Mexico streets. Electric vehicles reduce air pollution, period. In fact, the American Lung Association has found that cleaner car standards are among the best tools we have to fight climate change and ensure our air is breathable, and that our environment is habitable and sustainable throughout our lives and most importantly, for future generations. We have a small window of time to institute as many climate-improving measures as possible and the ACC² and ACT programs will be essential to keep New Mexicans' air safe and clean. There's really no downside to adopting this.
