

Charles Winiecki

We are nowhere near ready as a country or a state from an infrastructure standpoint to be able to support an overwhelming majority of electric vehicles on the road. Until we find a clean energy resource to power charging this many electric vehicles it's essentially defeating the purpose of mandating this change.

Also, for someone like me who travels regularly for their job around this New Mexico, there aren't enough charging stations and the length of time it takes to charge a vehicle would make it impossible for someone like me to do their job efficiently.

I commend the effort to try and make changes to aid environmental issues in our country and around the world, but mandating something like this would only make life more difficult for average citizens.

Why not let the consumer decide if they want to buy electric, hybrid or gas vehicles?
