

JODI ARCHULETA

im against the amendment being imposed by the State of New Mexico. I believe that in certain parts of the country, this may work. This state, NO. EV's will not haul a load of livestock, nor transport fuels, or goods, such as milk, or feed. When one of these vehicles is stranded, is another EV capable of transporting a vehicle in tow?

The grid cannot even handle the population using their appliances such as air conditioning, much less handle the charging a large battery in an EV. Regulating society's right to choose which vehicle to buy is an overstep in my opinion. Our monthly electric bills are already too much to keep up with, and adding another item to charge is not a smart choice. Also, the electric vehicles on the market are very unattractive.
