

## Amanda Anaya

I am 100% against the Governor's advanced clean car act. Once again she is over stepping her bounds and putting the the true needs of NM citizens to the back. Such a hypocritical act as mining metals like lithium has major environmental impacts including deforestation, high water use, and toxic waste. Not to mention, this mining is not done in the USA but done in third world countries with child labor.

Those who currently EV's are not paying for their use of NM roads. There is no infrastructure for this craziness and the people of NM cannot afford these vehicles. We are the poorest state in the country, last in education, a rampant crime problem state wide, drugs coming over our border and homelessness is out of country. Please focus on the real needs this state has. This is an utter waste of time. NO ONE WANTS TO LIVE LIKE CALIFORNIA.
